On the other hand, broadcast news puts out every press release from every charity
or politician about any new socalled ``public problem,'' which is not exactly doing
the job that you claim to come to work to do. The cynicism of reporters
used to be about being used. Today it comes from not doing any hard news work
and going after ratings.

In the context of this thread, where is the suspicion of NOAA's budget?
Why is every NOAA weather radio forecast laced with dire warnings about
heat, cold, wet, dry, or wind and the necessity of staying tuned?

Hearne's Law: whenever there's a stink in the media about something, it's
because some charity or politician wants a stink in the media.

The effect is to shout down any serious discussion. At least just shut up.
Bill your news as entertainment (``tragedy you'll enjoy,''; ``the anxiety hour'')
and drop the posturing. Cynicism is a political position in a democracy.

Emmanuel Levinas, at the end of an essay on Heidegger's Nazism:

``The diabolical is not limited to the wickedness popular wisdom ascribes
to it and whose malice, based on guile, is familiar and predictable in an adult culture.
The diabolical is endowed with intelligence and enters
where it will. To reject it, it is first necessary to refute it. Intellectual effort is
needed to recognize it. Who can boast of having done so? Say
what you will, the diabolical gives food for thought.''

This on the AP wire just now:

^Broadcasters tout public-service air time<
WASHINGTON (AP) _ Radio and television stations contributed an
estimated $5.6 billion worth of airtime over a one-year period for
public-service announcements and helped charities raise several
billion dollars for their causes, according to the National
Association of Broadcasters.

I am a 21-year-old currently in the journalism business and am considering heading to a local broadcast school (Connecticut). The question I have for those in the radio biz is this: Are they really worth it? (The tuition was quoted to me as nearly $8K!) My dilemma is this: I am not exactly rich, not looking to pour on too much debt early in life, and want to go to school nights and get a degree of some sort (though not in communications). Would I be able to get a decent job without a bachelor's but with something from a broadcast school? It's just one of the many options I am considering, but I want to hear your thoughts.

Thanks for any possible help you can lend me...

No hahaha! First off I seriously question your use of the term "a great deal" of videos. Secondly, to bill oneself as Music Television and then show endless streams of stupid, "who gives a shit", little kiddie soap operas and cartoons just don't cut it! And when they DO show videos it's interrupted all the way through the song and all over the lyrics with screaming 13 year old girl's dedications! C'mon! Like I've said many times, just wait 'til a REAL full service music channel comes along! Then MTV won't be this big "barometer of cool" that they've so much disillusioned themselves to be! They are so FULL of themselves it's pathetic! If only they really knew how bad their credibility has become or how truly bad they look! It's a non-stop barage of blistering embarssment! They're in bed with the record industry and everyone knows it! Sure, they can create demand as I've stated before but how "real" is that!
"The Real World"?..... Real people pay rent!!!

> Hardin came up with to back his views.

It doesn't matter if you watch two houses for one year or one
house for two years, you get the same chance of seeing a house
destroyed by a tornado. So unit of observation is a house-year.

Next the question is, how many houses for how many years fall within
the net cast by this experience of having a house destroyed ``five
blocks away.''

Not surprisingly, it's enough to produce about one at the very low odds
of having your house destroyed by a tornado. It's less, for
example, than by fire. The fire department is out saving basements
every day.

Flood is harder to work because you need to know more than the
number of houses and number of years, for instance elevation.

If you get the education check out the school thoroughly. As a former PD, I can honestly say that a good Broadcasting School can be a Godsend when you need a announcer and don't have a lot of time to spend training someone. But, a bad Broadcasting School, though it shows me that a person is sincerely interested in the career, usually means that I'll have to spend hours retraining. On more then one occasion I've had to tell someone to forget what they learned in "****** Broadcasting School", this is the way it's done in the real world.

I suggest you contact a few Radio Stations in your area and talk to a few Program Directors. Some, but not as many as in the past, will take someone with your experience under their wing and train you. This is my preferred method. I've trained around 35 average individuals, most went on to become high quality sought after, well paid broadcasters.

Get ready, it's hard but fulfilling work and although you won't have to pay 8k. Starting out as a part-timer and being trained you might not make much more then that the first year.

The necessity is found by considering both where tornados have hit and
where they have not. This is a simple idea. You can catch all dangerous
cases by calling everything dangerous, but it's a worthless activity.

Tornado warnings fall into this category. It's too rare that they matter.

From Lenky69 regarding Clear Channel buying WKDD...

-->Clear Channel isn't going to admit if they are going to change formats... Radio station's usually change formats without much notice or fanfare...<--

Radio stations usually change formats without much notice or fanfare? Good one...got me to laugh out loud. Thanks.

Now for the REAL reason Clear Channel (and anyone else) won't announce a format change for a station they're in the midst of buying...the FCC has modified, but not rescinded, its "prior control" rule. All pending format changes when a station is being sold are rumors, but they cannot be stated as facts.

The gist of it is that a buyer can't do anything that may cause a problem for the current owner. Announcing a format change could cause some current staff members to resign. For example, if new owners said they were going to change a station from Talk to a Country format, some current staffers may decide they don't want to work that format and will leave on their own before the new owner takes over and fires them. By leaving, they can create a staffing problem for the current owners who have to keep the station operating. The FCC calls that exercising prior control and, without a LMA, that's a no-no.

That's why incoming owners always deny any changes will be made. Of course, once the license transfers, they can do what they want.

The problem is that I live in a rather large market (Boston) where the openings aren't there for any entry-level person. And most of the smaller stations around here are already filled with staff.

From Bruce Butz...

-->Infinity will now target CC's WEBN for the
18-34 Males.The former WYLX just changed
to WAQZ 97.3 (Z-Rock). To add insult to
injury the WAQZ calls were used by Clear
Channel in this market for a Alt rocker two
years ago.Word is that Infinity will pull out
all the stops to promo the Z.
Won't be easy though.WEBN is a near legend
in this market.Been AOR since 1967.
Still there's a chance,like most of the CC stations in this (The home of
the former Jacor)
market,WEBN has gotten fat and lazy.Way to
many spots to much gab and that Jacor
"I'm so cool" arrogance just oozes from the radio. Should be
interesting.<--

Another problem Infinity will have is Z's signal. It's a class A FM
licensed to Lebanon and its signal doesn't cover the market well, even
with its new plant.

A question from Europe:
Is it forbidden in the U.S. to air "radar reports" (i.e. telling where are
speed controls in your city)?
I've never heard any on airchecks from the U.S. mainly beacuse traffic
reports are never featured in their entirety.

Yes it is very true that if you purchase the computer yourself, you may have to do some tweaking to make it work. That is the nature of non-proprietary software. That is also why in a recent edition of Radio World we printed an article on checking with the software manufacturer for their recommendations before purchasing your computer. We can tell you the common pitfalls we have seen in our customer base, what hardware to avoid in certain combinations and which hardware we have seen that works the best.

On the other hand, we do also sell turn-key systems like our competition, but at a much cheaper price and we have free tech support.

Sean,
Broadcast schools vary. Even the different branches of the school you are considering will vary in their ability to train you (just as the students who attend such schools vary in their ability to learn). There are some good broadcast schools, but you need to first determine what you want to get out of any type of training and then make sure the training the school offers leads you toward that goal.
If you want to be on-air, a broadcast school (if it is a good one) is the route to take. Very few stations care if you have a degree to hire you for an on-air job. What they want is a demonstration that you can do the job they are hiring you for - i.e.. the Demo Tape. The trick to demo tapes is to be sure that what is on your tape is an actual reflection of what you can do on-air. Too many people create a demo tape from snippets of their in studio training and cannot handle mistakes in real time. The reason is they rewind the tape every time they make a mistake. The outcome is a tape that is filled with all their perfect takes (maybe one in five). When they get hired from that tape, they can't always perform up to the expectation the tape gave the PD.
If you want to get into station management, then go to a college or university and get a business degree, with a minor in mass communications. It won't prepare you for on-air work, but it will get you a job.

Broadcast schools that last 8- to 16-weeks will be able to show you the basics of studio console (board) operation and possibly the basics of radio production. Unless you have a bunch of God-given talent and an incredible voice already, they will not be able to prepare you to speak adequately on-air for most markets above 50. If you have any speech anomalies, make that market 100. It just can't be done in 8 or 16 weeks. You don't have to have a great voice to be on air, it helps, but you do have to have vocal control. That takes 3 months minimum. Most of the 8- to 16 week schools train you to be a board operator and then, once you are in a station, they hope that you will be able to move up. That happens, but it is a bit chancy.

Go to our website and have a look around, especially at the RadioWeb Jobcenter area. There are a lot of files on helping you decide if you really want to get into radio, how to make a demo tape, how to write a resume and cover letter and more. You can also look at what we teach in our school (we operate under the auspices of the State of Florida Department of Education and are accredited by the Council on Education) and what we charge. As part of the Miami-Dade County Public Schools Adult Ed, much of our tuition cost is offset through school taxes - three trimesters (one year) at $484 per trimester. Our full-time program, including all books and materials, costs the average student about $1,700, and because we are fully accredited, students are eligible for financial aid. Plus, we broadcast an NAC/Jazz program and three newscasts on WLRN-FM (100kW Stereo) two hours a day, Mon-Fri.
Be aware, financial aid is not the same as a government loan. If a school can only offer you a government load for financial assistance (not Pell Grants and the like) they are probably not accredited by anyone except themselves. A school must be accredited by some recognized authority to be able to offer financial aid. That is also a tip-off as to whether the school is any good (to some extent).

The website address is: http://miamiradioschool.com

You'll see the links for information on our school and on the Job Center. We are a daytime only program and are in Miami, so I'm not necessarily soliciting you as a student. But use the information on our site as a basis on which to judge your selection of a radio training school.

Best Regards,

John Lovell, Broadcasting Instructor

Wow, 8 G's? I know what school you are referring to here. My opinion is save your money! The most you can expect from a school of that type is $6.50 an hour at a small station. Of course, that is if they will hire someone from that place. You could flip hamburgers while attending a community college and be way ahead of the game. Later you would have the option of transferring to a 4 year school. Good luck in your pursuits.

>great deal" of videos. Secondly, to bill oneself as Music Television and
>then show endless streams of stupid, "who gives a shit", little kiddie
>soap operas and cartoons just don't cut it!

MTV has never produced a full-blown soap--too expensive to produce.

>And when they DO show videos
>it's interrupted all the way through the song and all over the lyrics
>with screaming 13 year old girl's dedications!

If you look beyond "TRL," well over half of most weekdays is devoted to full-length showings of videos with only logo bugs or crawls during NewsLink." They must be playing enough videos for Billboard to do BDS monitoring and get a Top 50 list every week.

>C'mon! Like I've said
>many times, just wait 'til a REAL full service music channel comes
>along!

Like the Box--which is now owned by MTV Networks? Like MuchMusic USA, which has been in the U.S. for five years and made very little impact--and got *dropped* by AT&T/TCI from their digital tiers coast to coast.

>Then MTV won't be this big "barometer of cool" that they've so
>much disillusioned themselves to be! They are so FULL of themselves it's
>pathetic! If only they really knew how bad their credibility has become
>or how truly bad they look! It's a non-stop barage of blistering
>embarssment! They're in bed with the record industry and everyone knows
>it! Sure, they can create demand as I've stated before but how "real" is
>that!

Complaining about NTV doing non-music video programming at this point is like closing the barn door after the horses have left. Where were you ten years ago when "Remote Control" and "Liquid Television" first came on? MTV found out a long time ago that *just* videos weren't going to keep an audience tuned in--and that they would have to become a lifestyle channel for their demographic. On top of that, today's kids just aren't that interested in music as 80s kids (or 60s and 70s kids, for that matter). And despite all of the efforts they've made in recent years to get more music-based programming in prime time and on weekends, outside of "TRL," the must consistent ratings-getters continue to be non-music programming.

Besides, as much as you would like to think that MTV has brainwashed a group of teenage girls into loving 'N Sync and the Backstreets instead of (fill in name of act you think they should be listening to instead), the channel's always been more of a reflector than a leader of musical tastes. The only reason they

played the UK New Wave bands in the early days was because that was almost all they had to work with--if Journey and Foreigner had made videos from the start, you would've heard more of them. "Thriller" had to go to number 1 and have three monster hit singles before MTV would play a video from that album. As for their current fare, today's kids don't want to hear 90s grunge rock any more--and they're more accepting of hip hop now and want to hear more upbeat, happier music in what they see as an upbeat, happy time. You want adventurous new music? Go to an MP3 site.

It looks as though they don't update it that often.
Three mistakes right off for Florida are as follows:

1200 is now 1240 since WTLQ and WINK swapped dial positions.
WRNU is WAFN "1700 The Fan" and all English.
WQYK dropped Imus several months ago after they started calling
themselves "The Team" following the 820 divestion by CC to Mega.
Confused? ...little wonder the list isn't as up to date as we would
like. I salute MS-NNNN-BC for having the courage to print any list as
fluid as this one.

I used to work for a station in the bottom of the pile when it comes to population. People would come from all over the country for the low-pay entry level job. All you had to do us sell yourself and you are in. (and on your own) The talent that entered/exited the doors was awesome!! To this day I would go back to minimum wage if I ever won the lottery to see the talent. (and the cool thing is the talent was pretty much out-going and would hang out with people behind the scenes, which I heard isnt always the case in much larger markets)

With the hands on, I found out that I couldnt cut it. (comparing to the very talented people comming in and out) If you can cut it, a good resume tape is produced and more than likely move up to larger markets, which is what happened to most people that quit.

Not true. most weekends, unless it is a weekend that is devoted a a genre
of music, and this is rare, has MTV putting on a marathon of its non music
programming. As for why MTV play is monitored, they are basically the only
game in town for the 12-24 demographic.

>>C'mon! Like I've said
>>many times, just wait 'til a REAL full service music channel comes

Neither got decent financial backing. The Box is a pay per play channel,
and that style of format was never popular, MuchMusic does not have good
financial backing.

This is because MTV does not know how to do intresting genre specific shows like they used to do 10 years ago. And MTV has made very little effort in trying to get more musical based programming in the last 5 years on.

>Besides, as much as you would like to think that MTV has brainwashed a
group of
>teenage girls into loving 'N Sync and the Backstreets instead of (fill in
name
>of act you think they should be listening to instead), the channel's always
been
>more of a reflector than a leader of musical tastes.

I personally think that MTV, while not a leader per say, has enough pull to make or break many groups and genres. MTV almost single handedly caused raps exlosion in popularity between 96-99, and kept that genre alive during the dark days(for rap) of 94-95, when it almost feel completely off the charts. Why was it so kind to rap, and later teen pop, lets just say that many of the explanations I have heard are in the legal grey area, on the fine line between promotional money and payola.

The only reason they
>played the UK New Wave bands in the early days was because that was almost
all
>they had to work with--if Journey and Foreigner had made videos from the
start,
>you would've heard more of them. "Thriller" had to go to number 1 and have

>more--and they're more accepting of hip hop now and want to hear more
upbeat,
>happier music in what they see as an upbeat, happy time. You want
adventurous
>new music?

As I said, rap was pushed down upon the masses by MTV, and still is pushed upon the masses. Rap is very much so a top down promotion, rather than a grass roots form of music now, and this is reflected how the vast majority of rap albums you see on the charts may debut in the top 10, but collapse after that. Even teen pop at least has some grass roots support before making it up the charts, rap has none at this point, it has everything to do with promotional dollars and formula, and nothing to do with the music at this point, much like disco was 20 years ago.

As for rock music, many rock bands are starting to battle their way up the charts again, with little or no MTV play and with a mainly under 20 fan base. Creed is a example of a band that went to #1 based on rock radio play alone, and bands such as Godsmack went multi platnium based on radio airplay alone. I personally think people, especially the media read way too into raps musics popularity, and failed to realise that just about all the big Seattle/Alternative/Grunge bands that emerged in the early 90s basically flaked out on the things that sustain a rock bands popularity. If you dont tour, if you take 4-5 years to make a follow up album, or if you make a follow up album that intentionally tests the fan bases reslove to listen to it(such as putting out a pop or folk album that has none of the elements the fan base would really like), then yes, you will take a big nose dive in popularity, and that is what happend after 95, and I can name many examples.

Active rock and Modern rock radio still have fairly strong ratings, and as evidenced by a few new rock bands with chart success, still has a fairly big influence, even still pulls in decent numbers in the 12-18 demographic as well.

Go to an MP3 site.

It's a common feature on the radio at least here in California.
Usually, the information is actually provided to the radio traffic
service by the California Highway Patrol, in the hope that motorists
will go slow through the area if they think the radar guns are gonna
be up...

Go to a broadcasting school for a couple of years to learn the basics.
then get hired by a station anywhere, most likely a small town in the
middle of nowehere, in a format you hate, making barely enough to starve
to death. Move to a slightly larger town or to a format you prefer to
work in or are finally making enough money to live like a normal human
being. Repeat several times until you are in the city and format you want
to be in making the money you want. Get fired. Start again.

There are a number of AM Stations that sell block programming time. In most cases they aren't the greatest signals in the market but you can put your money down and they will buzz you in the door for your hour.

The only job you need a GROL for is to service Marine Radiotelephone equipment (marine VHF-FM and HF-SSB gear) and, if you have the radar endorsement, ship radar sets.

Everything else (except the new marine distress stuff) is fair game for the Maytag Repairman.

The Official AM Stereo Web Site at http://www.amstereoradio.com

More than you ever wanted to know about AM Stereo: what it is, how it works, what stations use it, and what radios support it.

Experience AM radio the way it was meant to be heard -- in high-fidelity AM Stereo, now featuring AMAX technology for better sound and reception! Get acquainted with a technology that has been used for nearly 20 years all over the world, in countries like the USA, Canada, Mexico, Brazil, Australia, Japan, Panama, Korea, South Africa, and even New Zealand!

And now, you can hear real examples of AM Stereo sound on your computer, via high-fidelity MP3 sound files that capture the true high-fidelity Stereo sound of AM Stereo!

Simply point your web browser to: http://www.amstereoradio.com

One note on this site -- it has a list of AM stereo receivers of various types, including the Sony STR-AV270 and STR-AV570. These models (which Kevin correctly notes were only sold in Canada) were available in the late 1980s, and are not to be confused with the STR-AV270X and STR-AV570X which are an entirely different chassis and were sold in the U.S. in 1991-92. (There was also an STR-AV370X in 1991-92, sold only in Canada; I don't know if either the 270X or 570X were also sold in Canada.)

Larry Stevens, the last surviving regular cast member of Jack Benny's NBC radio show of the 1940s, died of liver cancer on April 5th, according to his widow, Norma Stevens. He was 77 years old.

Stevens had been hired by Benny to be the show's singer after Dennis Day, his predecessor, joined the U.S. Navy in November 1944. He left the show when Day returned in March 1946.

Mike Neil

It remains to be seen what the Dept of Justice will do to Viacoms musical holdings, but there are many illregularities to how MTV is ran and how it chooses its musical playlist, and also many record companies do not have the best of relations with MTV at all.

Anyways, to make a viable competitor to MTV would not be that hard in theory, but it would be a battle get widespread distribution for it and finance it. If someone like FOX News Corp decides to finance a new music channel, all they would to put MTV on the ropes is try to appeal to the group that MTV ignores, young suburban males. Just drop all the political correctness, get a edge, and the urban "hipness", then you would have a station that would have MTV running scared.

The formula works for many radio stations as well.

You can look at what our school teaches, http://miamiradioschool.com

We specifically do not teach "talk radio" because it siply isn't an entry-level option. You're not going to leave a radio school (or college for that matter) and walk into a talk radio on-air position. You'll start out as a board-op at a talk station, advance to become a producer and then, possibly, start filling in for the host when they are out of town, on vacation, etc. If you do well, perhaps you can move on to a show of your own.

You can also check the Broadcast Education Association website. They mostly list colleges and universities, but it will give you an idea of what's available. Stay away from any school that charges an exorbitant amount for a short period of time, like a grand a week. It's to expensive. Stay away from schools that are less than 4 to six months long. Less than 4 months and your voice will never be under sufficient control to work in a top 100 market on-air, unless you are part of the top 5% intelligencia of the population.

The BEA website is http://beaweb.org

1511. A Different Kind Of Oldies Show Update - 4/8/00

Newsgroup: rec.radio.broadcasting
Date: 2000-04-08 00:00:00 UTC
From: Steve Coletti <bigsteve387@compaq.net>
Message-ID: <001f01bfa181$6cb4bae0$722d7fce@compaq>
Source record: 20066

For a high graphic version of this message see the current info page at our web site; http://home.compaq.net/~bigsteve387/current.html

Finally, we have our old shows for sale. Go to http://home.compaq.net/~bigsteve387/order.html for pricing and ordering information.

Our Oldie Of The Week is going away. We've been producing the Oldie Of The Week page on our website with a beta version of Real Producer that has expired. Replacing it with a licensed copy costs $149. Since I have gotten no feedback on my choices of records I've featured and it's the only thing we use Real Producer for, it isn't worth the expense to upgrade. Switching to another format for the recording is not an option. The file must be for listening only or we will violate copyrights. Only Real Audio's proprietary system offers the ability to make the files nonrecordable and not downloadable. We can still make .rm files with Real Jukebox, and we'll continue to do so for a while, but this limits me to only material I have on CD, most of my collection is on vinyl.

Website host changing. Our domain host; compaq.net, is moving from uunet to MSN in a few weeks. They have given no information as to what this means for personal webpages hosted at uunet right now. Hopefully it should be a transparent move for our URL, or it may mean that we may have to move our site to an MSN domain on our own. Please watch for postings on the usual newsgroups for any changes.

Our planned look at Internet Oldies Shows will be delayed until May or June.

TESTING, TESTING - We have now started a STEREO stream of the program on live365.com. Open http://166.90.143.149:9056 in your MP3 audio player. We are still using a bit rate comparable for a 33.6K connection so the fidelity will suffer. The reason we keep the rate low is because even those of us who get "good" connections with a 56K modem will get stuttering and jumping when the net starts to get congested or noise on the line degrades performance. What I DO need is feedback on both streams. The mono is also at 33K so it has some fidelity too it. If you have connection problems and would like us to lower it to say 28.8K please let me know it. If you would like the stereo feed to be 56K, then let me know.

April 8, 2000 - TV Land
1 Tele-vee-shon Stan Freberg
2 Disco Lucy Wilton Place Street Band
3 I Love Lucy Desi Arnez
4 Sock It To Me Mitch Ryder
5 Obscene Phone Call Lilly Tomlin

FM DXers would certainly appreciate the 50 kHz steps. As long as there
are presets / pushbuttons, small step sizes are no problem IMO.

Still 50khz as the FT-1. This accomodates recovery of tough
signals when there is interference from adjacent channels.

I have two stations near my home north of Chicago, 97.1 and 96.9
having a narrow IF and 50 khz tuning spacing, I can at least recover
a listenable mono signal during bad multipath periods, whereas a
200khz spacing would not permit this.

"FM DXers would certainly appreciate the 50 kHz steps."

A poor reason to burden other listeners.

"As long as there are presets / pushbuttons, small step sizes are no problem IMO."

That's just it -- the thing only has up/down tuning and just eight presets, so to tune to stations other than those preset you have to push the up or down button *four times as often* as you would with a tuner that is built specifically to North American standards with 200 kHz steps.

"Still 50khz as the FT-1. This accomodates recovery of tough signals when there is interference from adjacent channels. "

Would you at least consider a switchable mode -- possibly ganged with the wide/narrow switch, so it would use 200 kHz steps in wide mode and 50 kHz in narrow mode? That way the user could move quickly to the desired frequency and still be able to go off-channel by toggling the bandwidth switch.

Hi -

I'm adding a page on Loyd Sigmon's "Sigalert" system, to my site on the history of L.A.P.D. Communications < http://www.snowcrest.net/marnells/kma367.htm >. I have yet to determine exactly what tone was used to activate the receivers, how many radio stations had them, and so on.

If anyone has any information, especially on the early versions and its development in the 1950's I'd appreciate hearing from you. Or anecdotes, pictures, reminiscences about Loyd, his WWII service, etc.

I've been in contact with Mr. Sigmon's family already, and received some assistance from them.

Any help will be appreciated!

Phil Hendrie used to be on WSB in Atlanta years ago - he did a character called Steve Warnell , who was his redneck buddy sidekick who would occasionally sit in for him on his show. I really don't believe the audience realized he was doing both characters. The funniest talk radio I ever heard. Anybody know if he is still doing this bit?

I don't build the FT-1a. I'm a consumer. So,
although I may consider your modifications, that would
have no impact on production.

FT-1/a is an analogue tuner. It has a microprocessor
controlled tuning system, but it is not a synthesized
digital tuner. That permits a more accurate zeroing in
on the signal of your choice. And the smaller tuning
steps reflect that thinking.

However, the tuner is entirely firmware driven and may
be configured by special request of the factory for
specific requirements.

Address your inquiries to Marv Southcott.
Marv@fanfare.com. He's the man in charge, and, by the
way, a big fan of your website.

Not at true. You may push the tune button one time and hold it,
and the device will scroll very quickly through the frequencies, in
50khz steps, in either direction, until you get to where you're
going. In this regard the FT-1a differs from FT-1 in that it
scans/tunes much faster than it's predecessor.

Re: tuning steps on FM

I also hate tuners that crawl along in 100 or even 50 kHz steps on FM. If you want to put that kind of fine tuning in, make it an optional mode so you can tune in proper 200 kHz increments when you don't need fine tuning.

Also, there is no need to have the FM band tune up to 108.1 MHz -- the highest frequency the FCC allows FM stations to be on is 107.9 MHz! And the AM band goes from 530 to 1710 kHz, so there is no need to have 520 kHz on the dial, and if the TISes ever move to 1710 kHz, digital tuners that only go up to

I also hate FM tuners that crawl along in 100 or even 50 kHz steps. If you want to include that kind of fine tuning, at least make it an optional mode so we can tune in proper 200 kHz increments if we don't need fine tuning!

Also, a reminder to radio manufacturers: the AM band currently extends from 530 kHz to 1710 kHz. So there is no sense in including 520 kHz (like some radios do), and ending at 1700 kHz (like some radios do) will prevent people from tuning in the TIS stations that will eventually occupy 1710 kHz.

Source record: 20080

I did the Intern route, started out schlepping equipment to remotes and watching the PD's kids for no pay. Hung in there long enough that they started to pay me, then worked my way into weekends on-air. Did 6-12 on Sundays forever, it was good for my situation. Some board op, some on-air, some babysitting the brokered shows.

I never went full time due to other things going on in my life but I was doing what I wanted to do even if it was only weekends. The family that owned the staiton was flexible and let me be creative, within limits, and it's paid off.

That station has since folded but I do have my own talk show now. Yes, I buy the time but I am producing a serious small business talk show, which is sponsored so it's paying for itself. I am working with the business community now and am getting offers to do bigger and better projects, including internet broadcasting. So you never know where you could end up. You don't have to spend $8K, you also don't have to take 10 years like me. I comes down to , what do you want and how bad do you want it?
Go for it!

Best,
Mike

Pascal, do you have a college degree?
If you don't, get one, preferably in a major like history or political science with a lot of journalism or TV/Radio courses on the side. You will not have much credibility with a potential employer without one these days, especially if an on-air position is what you aspire to. Get a graduate degree if you can, it gives you an added edge as you move into larger markets later on...but a bachelor's degree from a quality college will usually be enough to get you started.
You will want to start on the air while in college, probably first on a campus station then part-time on a commercial station in your college town. After graduation you'll need to spend some time in small markets collecting small paychecks, gradually moving into the top 100 markets, then the top 50 (where the salary starts getting decent). Once you hit that point, where the paycheck gets healthy, so does the competition. In market sizes above 1 million population, there's a lot of top shelf talent battling for every gig, so you may or may not ever move further up the line into the top 10 markets...at that stage luck and connections start playing as much of a role as actual talent. It'll probably take at least several years, maybe a decade or more, before you land that job you really want. Are you willing to work and build your career over time that way? Then you'll have a good chance of eventually getting to the goal. I wish you well, it won't be easy but it's doable.

Appearantly, there is to be vote of the full house on Monday on HR 3439. A bill designed by the NAB to stop the new LPFM service from being implemented. The bill's Senate twin is moving thru that house toward a vote. To anyone who has followed this lpfm issue for the past 5 years it is clear that the NAB claim of "interference" is a red herring. Could it be that they are actually afraid of these (non-commercial, yet) 100w peanut whistles? Why are they lying to our congressmen? (Not to mention opening the purse strings- election time is coming remember)

Anyway, if this thing should pass - LET 10,000 TRANSMITTERS BLOOM!!! THE WAR IS ON !!
TAKE NO PRISONERS (THAT IS DONT LET THEM TAKE YOU LOL)

TELL THE FACTS ON THE AIR - (Have you noticed the major media has given the new lpfm service very litle attention?) GET SOME MEDIA ATTENTION!!!!!!!!

Could it be that the pro-LPFM people are the ones who are blind? If, as you seem to be saying, NCE LPFMs will not draw away a significant share of listeners, then the only remaining valid reason for the NAB to oppose it would be a fear of interference. If in fact that fear is unfounded, why would the NAB squander its political capital to stomp out a harmless bunch of pipsqueaks?

The only *rational* answer is that the NAB knows something that the pro-LPFM people don't seem to know, or at least is seeing the test figures in a different light. Considering the cumulative engineering talent on staff at the many member stations of the NAB, I expect they have a good handle on the subject.

"Anyway, if this thing should pass - LET 10,000 TRANSMITTERS BLOOM!!! THE WAR IS ON !! TAKE NO PRISONERS (THAT IS DONT LET THEM TAKE YOU LOL)."

Just wonderful. If you don't get your way, you'll just break the law. Why should I, or anyone else, bother to listen to your complaints if you're on record as favoring spoiled-brat behavior?

Rock-it Radio listeners club - http://www.rockitradio.net

Hello Again,

Well good news for you doo wop fans!!! We just completed and
encoded show #156 up in our archives website. 19 Doo Wop tunes
are awaiting you right now at our archives site at
http://www.palmsradio.com/rockittext.htm just click to show #156.

Here is the playlist:

1. You baby You --- The Excellents
2. Rang tang ding dong -- The Cellos
3. Ten Commandments of Love -- The Five Diamonds
4. Ding Dong Darling -- The Carter Rays
5. That's my Desire -- The Channels
6. Come on Home -- The Enchantments
7. I'll never leave you again -- The Youngsters
8. Ka Ding Dong -- The G Clefs
9. Laundromat Blues -- The 5 Royales
10. Whats That! -- The 5 Royales
11. Rip Van Winkle -- The Devotions
12. Doll Baby-- Tiny Tim & the Hits
13. Rink a Dink a Doo-- The Edsels
14. Little Bitty Pretty one -- Bobby Day & the Satellites
15. Little Girl of Mine -- The Cleftones
16. Heaven & Paradise -- Don Julian & Meadowlarks
17. Jump & Hop -- The Romancers
18. Diddle Dee Dum -- The Belmonts
19. At my Front Door -- The El Dorados

The G2 Real Player is required to hear our shows -- But... You can
download the G2 Real Player for free at http://www.real.com
~~~~~~
What Countries listen to the Rock-it?

Well Rock-it Radio is proud to say we have been heard by over 100
nations worldwide! On the Internet... Here are the top 15 Nations
that listen to the Rock-it.

1. USA
2. Canada
3. Australia
4. France
~~~~~~

5. United Kingdom
6. Brazil
7. Sweden
8. Netherlands
9. Russia
10. Germany
11. Finland
12. New Zealand
13. Japan
14. Italy
15. Belgium

Brazilian listeners have really picked up 2 weeks ago they were around
15th place and have soared to 6th place -- all due to our Portugese
page finally getting listed in Yahoo Brasil.
~~~~~~

Viva Las Vegas 2000

Unfortunately -- Due to not getting any time off from work this year
Bennie Dingo and Jammin' Jan will not be able to make the Rockabilly
Las Vegas festival -- But have our paws crossed for 2001!! We truly had a
great time in 1999 and wish we could make it this year --- but
We will have an official Rock-it Radio correspondent !!! It is none
other then Melissa "Rockifilly" Arenz... If you see her wearing a
Rock-it Radio T-Shirt give her a big howdy for us -- She will be coming
back with great Pics that we can share and some Interviews!!!

~~~~~~

Latest Tally on the Opinion Poll

If you ever notice on our main website at http://www.rockitradio.net
we have a place to click to for our readers and listeners to vote for
what style of music do they prefer on Rock-it Radio. If you haven't voted
yet -- just click to where it says "opinion poll" and vote!

Here is the latest Tally!!!

1950's Style Rockabilly 112 votes 39%
1950's style Doo Wop 109 votes 38%
Rockabilly today 68 votes 24%
~~~~~~

CD Now offers 20% Off Import CD's

There are currently 2 ways that Rock-it Radio pays for the Internet
bandwidth and Webspace to bring you these shows --- That is from
the listeners when they wish to purchase CD's, Books and Videos
they shop at our main website at http://www.rockitradio.net and
shop at Amazon.com and CD Now.
Right now for those that want to check out CD Now there is currently
a 20% savings on all Import CD's. You can shop and check it out at
~~~~~~

http://www.cdnow/from=sr-1356502

~~~~~~

Contest! Contest! Contest! Contest! Contest! Contest! Contest! Contest

It's Rock-it Radio T-Shirt giveaway time again!!! Just be the 5th or
6th listener club member to e mail us at Rockitradio@earthlink.net and say
that you want a Rock-it Radio t-shirt.

Congradulations to: Micael Bergstrom from Sweden who won our
Bourboniares CD last week.

Remember also Rock-it Radio is always glad to take your requests and
dedications here and just e mail us at: Rockitradio@earthlink.net

All the Rockin' best,

Bennie Dingo
Rock-it Radio

e mail: Rockitradio@earthlink.net
URL: http://www.rockitradio.net

Was I being a bit too ficitious -?
<< If, as you
seem to be saying, NCE LPFMs will not draw away a significant share of
listeners, then the only remaining valid reason for the NAB to oppose it
would be a fear of interference. >>
In the REAL world are we truly to believe that 100w on a 3rd adjacent is going
to cause a problem ? NO !! so the real fear of the NAB and their reason for
spending the $ to stop lpfm must be a loss of listenership.
<< "Anyway, if this thing should pass - LET 10,000 TRANSMITTERS BLOOM!!! >

<< Just wonderful. If you don't get your way, you'll just break the law. Why
should I, or anyone else, bother to listen to your complaints if you're on
record as favoring spoiled-brat behavior? >>
I HAVE been playing by the rules! Should I be surprised that part of the rules
of the game include bypassing the ref's calling (the FCC) and whoever gives the
most $ the to scorekeeper to post the final score wins?

2500-3000 low power translators can't be wrong. Many are on second or third adjacents and don't seem to bother anybody except for the insipid programming they broadcast. If you'll check the FCC Daily Digest, you'll see there are thousands more being applied for. The numbers of these things is really alarming. Most translators run 100 to 250 watts. There is one near my office running 140 watts on a 400 foot tower, which is perfectly legal. I'll go so far as to say they put out a very nice signal. It gets good coverage for miles, but that doesn't seem to bother anybody at NAB or elsewhere.

In fact in my area, there are at least four short spaced full power stations that seem to co-exist rather well.

If it really were necessary to have three adjacent channels protected to get decent reception, I'd be in favor of that. Obviously, it isn't. Short spacing is done all the time. It seems only right that the rules be evenly administered for EVERYONE, and that should include LPFM.

IMO, the NAB destroyed their case against LPFM when the were relatively
passive about high-power (>10W) translators. Couldn't they see the
numerous pirates as a potential LPFM service?

Also IMO, we have yet to see whether 400 kHz separation will be adequate
for IBOC digital [if IBOC really works in the real world]. One can
guess that the 200 kHz B-to-B spacings here in the east
(Baltimore/Washington) will be a problem. I see that one such pair is
in the IBOC field tests, but with IBOC on only one of the pair.

Radio and TV history sites, huh? Okay, in no particular order...

http://www.exit109.com/~jimh/radio.shtml
Jim Hawkin's Radio room, lots of interesting transmitter site photos,
history and links

http://www.execpc.com/~kwin/radio.html
The Wisconsin Radio Page

http://hometown.aol.com/cingram/television/dumont.htm
The DuMont Network

www.lionlmb.org/quadpark.html
Quadruplex Park- history of videotape machines, all formats

also my own site has dozens of links to radio & TV sites at:
http://www.geocities.com/SouthBeach/Palms/9689/links.htm

(look for the Radio & TV section)

Hope this helps!

1546. BSI Troubles Continued

Newsgroup: rec.radio.broadcasting
Date: 2000-04-09 00:00:00 UTC
From: Shawn Fink <finkster@en.com>
Message-ID: <38F0EE1A.403214A2@en.com>
Source record: 20097

Hmmmmm, don't mean to sound cynical here, but a few facts for y'all to back up my claims on BSI's lousy technical support:

1. Notice that it only took a week and a half for a BSI rep to respond to the posting here.

2. The same rep e-maile dme Thursday, and I wrote back a detailed list of my complaints and problems, I included the fact that I am fed-up with waiting so long for their technical support people to help me each time I initiate contact, and stressed that each day that their system fails to work porperly is lost revenue for my company. STILL NO RESPONSE, not even a "sorry for the troubles, we're looking into your problem."

3. All this comes after extended communications with another tech person who apparently decided my situation was hopeless, becuaseI haven't heard a reply from him in a week m(his best suggestion to date was download the latest revision (#50!) and see if that works.

And people wonder why I would enver reccomend BSI to anyone, and why the words "CLASS ACTION LAWSUIT" keep popping into my discussions :-)

This has not been a concern of the NAB in relation to the multitude of translators (which operate at 2.5 times the power of the proposed LPFM service). I, for one, would have to believe that, if 250 watts is no cause for concern, then 100 watts is even LESS of a cause to worry... But, then again, I'm not the one running around scared to death that I may be forced to actually SERVE my community of license instead of plugging in more prerecorded sweepers to run between satellite fed music sweeps while I head to the bank to deposit some poor suckers money...

Ed,

Please don't take this personally, but this interference issue is (and,
I'm speaking as an engineer with 23 years of experience in these matters)
the biggest load of bull I've ever encountered. In fact, if interference
were the real issue, I'd be willing to wager the NAB would be filing a new
Petition To Deny each time one of the large religious broadcasters applied
for a new translator (which, by the way, are MORE powerful and closer spaced
than the proposed LPFM service). Been there (the board meetings with the
group owners) seen that (the group owners freaking about LPFM - and NOT from
an interference standpoint).
It's a matter of "someone else may find a way to tap into MY $$$!"

1552. Does Your Market Have A "Morning Mayor"?

Newsgroup: rec.radio.broadcasting
Date: 2000-04-10 00:00:00 UTC
From: ". ." <nh153@mail.com>
Message-ID: <381352320.955350635928.JavaMail.root@web35.pub01>
Source record: 20008

Here in NYC, Harry Harrison of Oldies Station WCBS-FM calls himself "The Morning Mayor." Harrison switched about 20 years ago from then-Top 40 Powerhouse WABC as the station started losing listeners.

At WABC I don't believe he called himself the "Morning Mayor." That title was associated with his predecessor in the morning slot, Herb Oscar Anderson.

Maybe it's a bit silly as a title but it implies the morning show host dominates the radio dial to the point that he's like the city's mayor before City Hall opens for business each day.

I wonder if any other veteran morning hosts call themselves "The Morning Mayor" around the U.S.?

Craig

Engage sarcasm mode: "It is a known fact that, rebroadcast pablum (with absolutely NO local origination - beyond 30 seconds per hour, anyway - occupies MUCH less bandwidth than locally originated programming."
In fact, the other day, in northeast Texas, I was driving along, minding my own business and I heard an EAS test... Aimed at CALIFORNIA! Now, I must ask of you, how on earth could ANY form of local programming seek to serve a community better than THAT? During the past month, I've seen severe thunderstorms, severe hail storms, tornadoes, electrical storms and (back in January) even severe winter storms... And, NOT ONCE an activation of that particular EAS system. But, it's good to know that, if "the big one" suddenly hits california, northeast Texas WILL BE WARNED!

Years ago, then-dominant WIP-AM in Philadelphia had an extremely popular morning host, Joe MacCauley (sp?). I was only a kid, but my parents listened to this guy...and he was reegularly referred to as "The Morning Mayor" for quite a number of years. He (IIRC) called himself this...but other station personalities, and the local papers also used this nickname when referring to him. Different time... different society... but I've never heard of anyone since being called that. Interesting.

Never mind the broadcasting schools. Go to college and learn to think.
Once you get on the air you'll need more than just the knowledge of
how to run a board.

You'll actually have to have something to say people are willing to
listen to. That's that hard part.

>IS ON !!
> TAKE NO PRISONERS (THAT IS DONT LET THEM TAKE YOU LOL)

Hmm. Who do you hurt most by that? 10,000 transmitters blotting out listeners' ability to listen to their favorite stations. What a wonderful way to win their support.

There could be no better way to get the FCC to change its mind and Congress to believe they made the right decision than when they get hundreds of thousands of interference complaints.

Since LPFM is only for community leaders I wonder how many schools and churches will fire up illegal transmitters?

It seems to me the only folks who would do such a thing are those already doing it - pirates. Nothing new here.

Social engineering doesn't have to obey the same laws of physics RF
Engineering does.

The FCC operates as a political entity. As such, they can change the
laws of physics to accomodate political pressure.

We use MP# all the time. Mostly it's used to shuttle spots back and forth
between stations rather than using couriers. We have downloaded songs as
well to use until we get the CD from the record weasels.

We just convert the MP3's to .wav and load it into our on-air system. Use
the software of your choice.

Source record: 20015

Bob Smith writes:<< do you have a college degree? If you don't, get one, preferably in a major like history or political science with a lot of journalism or TV/Radio courses on the side. You will not have much credibility with a potential employer without one these days, especially if an on-air position is what you aspire to. Get a graduate degree if you can, it gives you an added edge as you move into larger markets later on...but a bachelor's degree from a quality college will usually be enough to get you started.>>

I think that Bob has some valid points but I don't totally buy the argument of a college degree as a necessity to become a radio broadcaster. As far as credibility with a potential employer I don't know if my degree helped at all, as many of the program directors that I have worked for could barely compose a coherent sentence.

Where I live the talent pool is so shallow you can get a part time on-air gig if you can do three things: speak and show up for the shift. If you don't get high or drunk while at work it is considered a plus. If you don't call in "sick" 2 hours before your shift because you want to keep playing Sega you are considered top notch.

As far as broadcasting schools I've heard from a bunch of different bosses that when they see one listed on a resume it often works as a minus.

One way that you can get some training without having to drain your pocketbook is to get involved with a noncommercial station. Many college radio stations let members of the community volunteer and often have very solid training programs for a nominal fee, usually to cover the textbook. A course like this can give you lots of hands-on training without laying out a lot of dough.

We use them quite a bit for emergency automation. We're normally staffed live 24/7 so we don't need anything fancier, but if someone doesn't show up for an overnight, and for college breaks when no one is around, we have a lot of prepackaged programming on a hard drive, with lots of sample hours sitting there. Winamp has worked well for us.

Beats the thousands for Audiovault, eh? =)

>I think that Bob has some valid points but I don't totally buy the argument of a college degree as a necessity to become a radio broadcaster.<

Bob is right on the money on this one. The original poster said he wanted to get into talk radio, and in order to rise above the crowd, you had better have something intelligent to say and know how to ask pointed, relevant questions. A college degree gives you the background and knowlege to be able to do that, day after day, hour after hour. You can believe it when I tell you that having to fill three, four or five hours with talk, especially if it's on a subject that doesn't light up the phones, is a really difficult task. If you've exhausted all you have to say on a subject in three minutes, filling the rest of that time with dead air is NOT an option. Good old-fashioned "book learnin' " will make filling that time a no-brainer, and will keep the audience tuned in.

>>air?
Our company uploads weathers and sports reports onto the internet for our affiliates. We encourage them to use the free "Windows Media Player" to playback those files. Most of them hook up their sound card to a pot on the board and record them to the place they want the report. The beauty of MP3's is their sound. Every station tells us we sound like we're in the studio!

>>Has anyone ever used MP3's on the air for the occasional 'hard to find'

Hi Patrick! I'm living in Nowhere, Alabama and I want to move. I was
sent over here by my company, Susquehanna Radio Corp., and I think they
sent me over here to shrivel up and die. Their original intent is to
move the frequency back to Atlanta...unfortunately we're still waiting.
I started working with 99x in Atlanta, and moving over to Alabama was a
culture shock for me. After 2 and a half years, I would like to find
another on-air job...i.e. in Florida, NC, SC, ME, CO. My favorite
format is new rock. I have been working at a hot country formatted
station. If you have any information, I would really appreciate it.
Thank you! Sarah

We had a real "morning mayor" back in the 70s. Andy Lynn Statz, who'd
been with the station since it originally signed on in 1948 (and had done
mornings much of that time) was elected mayor of Storm Lake, IA. He was
in office for 10 years, remaining on the air all that time.

BTW, he's still at KAYL, now semi-retired but still on 8-10 am Mon-Sat.

What am I missing here? If a song is owned by a label, or licensed by ASCAP/BMI/whatever, and it is played for "public" entertainment then they want their pound of flesh for each "spin". It doesn't matter if the song is being played from MP3, CD, vinyl, etc. You may or may not have to pay for your MP3 player. You certainly had to pay for your turntable or CD player. But that is the extent of what you have to pay to play (re: hardware). There may be patents involved with the playing device/software, but I don't think there's too much of a copyright issue. The MP3 software is authored, and copyrighted. You can't plagiarize the code and profit from it. But once you own it via purchase or freeware you are free to use it...even on the air. But there is a copyright issue with the song(s) being played...unless it bypasses the label/ascap/bmi/whatever issue and is "released" as an MP3 directly to the internet, in essence freeware.

Or have I completely misunderstood this thread? If so I'll have to check with my answering service again.

Well, actually, it depends on your usage. First, "rip" refers to copying the contents of a CD somewhere, usualy onto a hard drive. I don't think the Napster program does this for you.

Secondly, MP3s aren't inherently bad. Some are even public domain. I guess this depends on what you mean by permission, but I'm curious how this would hold up in court. Except for leaked records (like when Pearl Jam's "Given to Fly" was prematurely playing in Syracuse, and the MP3 made it to other stations, all playing it prior to a cease-and-desist order), I think most companies would be happy to have the airplay without the expense of servicing.

BTW, I suspect that the big companies will cease servicing CDs altogether within two years or so. It just seems so cost-ineffective in this day and age.

> servicing.

I"ve been involved in and around radio stations for more than 40 years, and I don't know how many times I"ve heard this said at a radio station just before the sheriff comes calling with a C & D. Further, the attitude that, "Well do this until we get an order to stop," has backfired more than once in my experience, with one station virtually shut down by a major motion picture studio as the FIRST line of action.

So, be careful with your assumptions. You're playing with someone else's product, when you put something on the air. Even the CD's your served with are clearly marked that they are for promotional use only and all rights and ownerships are retained by the record company. Don't think that the same may not be applied to MP3's. With the cost of piracy in the music industry, the record companies are not going to take any step that will jeopardize their control of product, even if it means that they have to ship you physical media to do it. And they WILL pursue if the mood strikes. With a vengeance when they need or want to.

Watch your back.

Eric,

I highly doubt it. A recent report stated that only some 44% of the U.S. population even owns a computer. Computer sales have slowed.

If things don't change much in the next two years or so by way of computer sales, CD's will still be in high demand. As long as the public wants them, CD's will still be manufactured.

Depends on the contents of the file. Airing MP3's of copyrighted
material without "proper" license will result in ASCAP, BMI, or some
similar corporate fiction breathing down your neck. Material produced
in-studio can be compressed to an MP3 file and aired at will,
hassle-free, provided you've gotten "clearance" for any copyrighted
material you may have used in production.

As for "an MP3" in general, MP3 is a format for compressed audio data.
There is (and will be) nothing illegal about the format itself.

"Hassle-free?" Not really, the radio station could be liable to pay for an MP3 software license. No joke! A guy I know just received a note from ENCO which now supports MP3 playback on their DAD units. The caution is that while their product now supports MP3 playback, it may not be legal. It is important to note that Broadcasters using MP3 file may be liable to pay fees to FHG (developers of MP3). Go to www.iis.fhg.de/amm/legal for details (there aren't a whole lotta details there now, but there will be plenty of updates to be sure). This would apply to broadcast. Talk to your station's legal rep. before playing MP3s on the air!

It seems to me, that if the software is licensed to use the MP3 encoding/decoding method, and the station has purchased the software license, then that should be all the licensing you need.

The precedent was set when word processing was first licensed. Otherwise, every business in the world would have to pay a fee for every business letter or memo every written.

Of course, I'm just an engineer, not a lawyer.

I doubt that. MP3 is MPEG-1 level 3 compression; it's an international
standard and the same one used by the Telos Zephyr and other hardware
codecs. If MP3 were proprietary, then everyone with a Zephyr would have to
pay, too.

Now, the *decoding* software you use may well be proprietary, but that's
another matter.

I hope none of your stations play music from hard drive, then. From the
point of view of the copyright holder there's no difference between
playing an MP3 of a piece of music and playing any other copy you may have
made. Many music-on-hard-drive systems use MPEG layer 2, a close relative
of MP3, and some use MP3 itself.

Word processing was never licensed, since it was never patented. MPEG
is subject to many patents in the United States and other countries.
Anyone using MP3 codecs, whether in software or in hardware, should
make absolutely certain that the product they are using is properly
licensed by the MPEG Licensing Association <http://www.mpeg-la.org/>
or by the individual patent holders (of which there are several
dozen). Anyone distributing material in MPEG format is required to
have a separate license and pay a separate license fee for each unit
sold. (This mostly applies to DVDs at this point, but also applies
should you sell material you recorded yourself in MPEG format.

Actually, the FCC isn't engaged in social engineering, or it would be much
better at getting things by Congress. It instead looked at the present
situation, used lab tests and concluded that in some locales, there was room
for low power fm stations.

Congress however has little hesitation in responding to things in ways that the
public either doesn't want, or won't want in the near future. There is all too
little room for innovation in radio presently, and Congress seems bound and
determined to make even less. I even admit that most of the probable LPFM
stations would have been duds with few listeners, but some would have tried new
things or served folks who presently feel the need for new programming.

I also note that lots of programming doesn't necessarily translate to
improvement, consider for example cable television, which most men seem to use
more to surf than to watch, on radio, it's even more common to "surf", without
new things, radio is going to lose its audience eventually, generation X for
example listens to less radio than those older than it, and generation Y seems
to consider radio as worth ignoring, a future promise that will haunt everyone
still in radio.

Hi folks ...

I'm writing to announce (in more ways than one) that some friends of mine (and possibly yours as well) at Tapeworks recording studio have been honored to have their new website selected as the "Cool Site of the Day" for this Saturday, April 15th. I was pleased to provide voiceover for the some of the interactive animation on this site. And now I'd like to help generate a little traffic on their big day.
Doug and the gang at Tapeworks (as well as I) would appreciate it if you would take a moment to point your browser to http://www.coolsiteoftheday.com/ some time on April 15, if it's not too taxing for you. Go to "Today's Cool Site," check out the Tapeworks website, and maybe even cast your vote to "rate the site."
It really is one of the coolest sites I've seen and I think you'll enjoy it.

Jurassic Communications - Part II

The Global Influences Leading Up To Marconi's "Lucky 7's" Patent
By: Donald E. Kimberlin (As published in NARTE News, Volume 17 Number 3, October, 1999)

This is the second of an ongoing series under the generic title of "Jurassic Telecommunications." In its various articles, one can see that the modes of electronic communications so taken for granted today are really largely late Victorian technologies first realized in an era before electronics; one in which there was no amplification, no frequency conversion and only battery power. Considering that, it's really amazing that the pioneers accomplished what they did.

Most technologies begin as a method in search of a problem, and communication by radio is no exception. For most of the half-century following successful use and expansion of the electric telegraph, a number of experimenters added contributions to radio. Some even seem to have had useful radio in their grasp, only to let it lie fallow. It finally all came together in April 1900 with 26-year-old Guglielmo Marconi's British patent 7777.

Up to that time, American dentist Mahlon Loomis had demonstrated in 1865 that an electrical disturbance could be caused in a kite-flown "aerial wire" by opening and closing the circuit of another kite-flown

"aerial wire" at a distance of 18 miles between mountain tops in Virginia. He even obtained a U.S. patent (issued in 1872) indicating it might be used for "telegraphy," but never obtained funding to back further development, in all likelihood because the then-powerful Western Union Telegraph Company had a number of other, nearer-term technological fish to fry, not the least of were both transcontinental and transatlantic telegraph businesses in addition to a burgeoning domestic telegraph network. Loomis died a broken and bitter man.

Karl Braun in Germany discovered "one-way conduction" in metal sulfide crystals in 1874, but the applicability of this phenomenon to detecting radio signals was not to be thought of for several decades in the future.

Based on taking up a prize challenge in 1879, German physicist Heinrich Hertz demonstrated in 1887 and 1888 transmission of electromagnetic waves indoors across university lecture halls, showing students that invisible waves that propagated much like light did indeed exist. Since Hertz' laboratory demonstration devices consisted simply of spark gaps in metallic rings resonant at around 150 MHz, with no amplification, he could show and announced the contention that whatever was being transmitted, it had no commercial potential. Although a young man, Hertz unfortunately died at age 36, just before he might have seen others adding to his work and leading toward everyday uses.

Edouard Branly in France started work to study nerve conduction in 1885. His need for a sensitive electrical detector resulted in the Branly Coherer, a tube of loosely packed metal filings that would clump together when a weak current flowed through it. The coherer, adopted and modified by others became radio's first practical signal detector.

William Crookes suggested in 1892 that electromagnetic waves might be used for wireless telegraphy, even though this was 5 years before J.J. Thompson would announce the existence of electrons. At the time, no one was interested.

Oliver Lodge, an English professor at University College, Liverpool, independently achieved results similar to Hertz, publishing just a month after Hertz (which means we might have called radio waves "Lodgian waves") By 1894, Lodge was demonstrating transmission of electromagnetic waves through walls in London and later at Oxford University. Lodge added an important function to the Branly coherer: A mechanical "tikker" that randomized the filings in the coherer after each detection event. Ambrose Fleming, later to become a close associate of Marconi, was in the audience and later wrote he had seen Lodge transmit alphabetic characters using the Morse telegraphic code; letters that formed intelligible messages. (The actual message content, regrettably, seems to have been lost.) Also, Lodge, in connection with related interests he had concerning the nature of lightning, had already defined basic properties of electromagnetic

waves, showing that the period of a wave in a resonant circuit was equal to 2 pi LC. Lodge at the time stayed close to his profession of Professor of Experimental Physics, and thus had no interest in further developing his nascent "wireless telegraph." Although he has developed the concept of tuning a circuit, using the musical term "syntony," Lodge does not begin to exploit his discoveries until 1901, after Marconi has begun to use the concepts in practical wireless telegraphy.

In the face of all this, Marconi's first knowledge of electromagnetic waves did not occur until 1894, when, as an unmatriculated protege of Professor Righi at Bologna, he reads about Hertz' demonstrations. Professor Righi was himself replicating and expanding on Hertz' work, but with even smaller loops than Hertz; loops that suggest Righi's waves had a frequency in the region of 3 gigaHertz, which would, of course, result in an even shorter transmission range than Hertz had shown.

Marconi, well-to-do son of a Bologna merchant family, built his own experiments on the family estate and by 1895, succeeded in signaling over a distance of about 2 kilometers. Most exciting to him was that the signals traveled over a hilltop, between a transmitter and receiver that were out of sight of each other. At the time, and for some years later, many still contended that electromagnetic waves behaved exactly like light, implying a range no farther than line of sight. Marconi had to repeatedly demonstrate transmission beyond the optical horizon to a skeptical world.

In Russia, Alexander Popov worked at improving the Branly coherer by selecting the material and size of filings, adding his own "tikker." Popov demonstrated detection of electromagnetic waves generated by lightning as much as 30 kilometers distant when connected to a lightning rod that was, of course, an antenna for the coherer. An academic like Lodge, even though he wrote that his apparatus might be used for signaling, Popov never developed the notion of sending messages to a complete fruition.

By 1896, receiving no interest from the Italian government in his work, Marconi took his apparatus to England, where he could count on influence and land owned by relatives based on his family's connection to the Irish Jameson Whisky family. On his arrival in England, frightened customs inspectors smashed his machinery, fearing it to be part of an Italian anarchist plot. Fortunately, it is simple enough that it can be rebuilt without difficulty.

Also in 1896, Nikola Tesla of Serbia, whose primary interest was electrical power transmission rather than communications, had developed a rotary arc transmitter and the notion of a vertical "aerial wire" as parts of a proposition to transmit electric power without wires. Although incomplete of Tesla's contribution at the moment, Marconi applied for British patents covering "wireless telegraphy," showing a clear purpose to transmit information by

electromagnetic waves as the end purpose of his invention.

By 1897, starting a barrage of experimentation and development that was to characterize the personality of both Marconi and his companies, Marconi demonstrated a range of first 7-1/2, then 14 kilometers. Based on that success, he founded his first English company, The Marconi Wireless Telegraph Company, Limited. Returning to Italy in the latter half of 1897, he demonstrated wireless telegraphy with ships 18 kilometers offshore and over the horizon. At the end of 1897, he was back in England showing that a station on the Isle of Wight could communicate with ships as much as 30 kilometers distant, By 1898, he opened a commercial wireless telegraph service to Rathlin O'Birne Lighthouse Island near the entrance to Donegal Bay in northwestern Ireland.

On March 27, 1899, Marconi joined England to Europe with wireless telegraphy between his shore station at South Foreland Light and a station he built at Wimereux, 50 kilometers across the Channel. He was nearly in a position to compete with submarine telegraph cables across the Dover Strait that had been operating since 1851. The notion of competing with telegraph companies was obvious.

By the summer of 1899, Marconi had finally waited out and overridden political obstacles in the Royal Navy and was invited to place his wireless on three naval ships during maneuvers. The range to his shore station ran as far as 160 kilometers, while ships could signal each other as far as 110 kilometers and occasionally as far as 136 kilometers. By this point, interference was becoming intolerable with no real tuning or band-limiting of emissions. Marconi had to get to work on employing some "syntony," which Lodge had patented in 1897. Marconi took "syntony" a step farther than Lodge, providing tuning at both the spark transmitter and the coherer receiver as part of his famous Patent 7777. This did not keep Lodge from later suing Marconi in 1910 and settling for cash in 1911 over patent infringements.

However, in 1900, encouraged by his recent successes, Marconi told the board of his newly formed Marconi International Marine Communication Company" that he wanted to construct high-powered wireless transmitters to span the Atlantic Ocean. The result, as we all know, was the epochal transmission of the Morse letter "S" between Poldhu Point near Mullion on England's Lizard Peninsula and Heart's Content in Newfoundland on December 12, 1901. The details of that accomplishment, and those of several later starting parallel developers to Marconi, are stories for another time.

What did happen by April 1900 was that Marconi uniquely had combined Professor Righi's transmitter, Branly's coherer, Tesla's elevated antenna and Lodge's tuned circuits to realize what ultimately became first wireless telegraphy, then speech, music, control tones and data transmission by radio. And, it's doubtful anyone with less financial resource, political influence and staying power than Marconi could have accomplished the progress he had made by the turn of the century.

It's an appropriate time now to consider how far we have progressed in the 100 years since Marconi got it all together in 1900.

I think when someone says "servicing" it's meant to be what record companies send to stations. In that case, I would be willing to venture a guess that close to 75%-80% of ALL radio stations have computers for on-air use. I have to admit, that would be a guess on my part.

Good point, but is that to say that these copyright holders would object to
me carting records for airplay purposes?

I can't remember any "Morning Mayors", but WLS had an "Emperor". So did WRIT in Milwaukee. And I'm sure other major markets did, too.

Bill in Fort Worth

1595. Indiana RadioWatch

Newsgroup: rec.radio.broadcasting
Date: 2000-04-11 00:00:00 UTC
From: Blaine Thompson <phredd@indy.net>
Message-ID: <Pine.SUN.4.10.10004111744200.25032-100000@indy3>
Source record: 20048

Your editor at IRW has been ill the last two weeks, so this is a short issue. He'll play "catch-up" and you'll see the results in the next issue (April 22)

Northeast

Hot AC/WMEE (97.3fm, Fort Wayne) shuffles their airstaff: PD Chris Didier's airshift expands to 10am - 2pm, OM John O'Rourke now does afternoons 2pm - 6pm, afternoon guy Boomer takes nights (6pm - 10pm), and John Mathews does 10pm - 2am.

From the police blotter: WPTA (Channel 21, Fort Wayne) anchorperson Marti Wright was arrested near Auburn on a misdemeanor charge of operating a vehicle while intoxicated. According to the Fort Wayne News-Sentinel, county sheriff's deputies booked her around 11pm Thursday March 30, where she was held pending a $500 bond. No word from station management on Wright's future with the ABC affiliate.

Eastcentral

Muncie news: Oleita Martin is now doing mid-days at simulcast HotAC/WHTI (96.7fm, Alexandria) & WHTY (93.5fm, Hartford City). Martin's new air name is Kay Lee.

Central

Last issue, we told you about an impending format change on Rock/WNAP (93.1fm, Indianapolis). All came true on Tuesday March 28, at 6am, as WNAP flipped formats to CHR. After the countdown hit 0, and a quick legal ID ("This is WNAP-FM, Indianapolis, so bite me"), there was dead air (2:04!) Their first song was "The Rockafeller Skank" by Fatboy Slim. At 7:00am we were rewarded with "Radio Now 93.1 is WNOU, Indianapolis"

Thanks to several IRW correspondents, we were able to hear tape of the broadcast a few days later. IRW had contemplated driving down there, but the early hour precluded us from doing so (we're night owls!)

Here's the lineup (nights aren't definite):

Mornings: Marty McKnight (formerly "Booger" at WWXM in Myrtle Beach, SC). McKnight's sidekick: Jana Sutter (formerly MD/Middays at WNOK in Columbia, SC)

Middays: J.D. Redman (formerly nights at WKSS in Hartford, CT)

Afternoons: Chris Ott (formerly APD/nights at WABB in Mobile, AL)

Nights: Doc (from WWXM in Myrtle Beach, SC)

What does this mean for former WNAP employees? The entire programming department is gone, we hear. Robert Feder's column in the Chicago Sun-Times informs us that Jo Robinson, formerly PD, is now in the Interactive division of Emmis Communications (owner of WNAP). There, she will focus on website content for all of the Emmis-owned stations.

Steve Cooper, part of the morning show at AC/WTPI (107.9fm, Indianapolis) is being "roasted" on May 5. The roast is a benefit for the Indianapolis Muscular Dystrophy Family Foundation. We hear it promises to be a great evening!

"Radio's Best Friend" Art Vuolo pointed out to an industry publication that Indianapolis' "The Bob & Tom Show" is heard in all of the markets where the NCAA Final Four teams are based: Michigan State (WJXQ/Jackson), Wisconsin (WIBA/Madison), North Carolina (WXRA/Eden), and Florida (WRKG/Newberry)

Speaking of Bob & Tom, they're gone at KARO in Boise, Idaho while they're added at in Topeka, Kansas, where they're heard on KMKF.

Southeast

Family Worship Center (WJFM, Baton Rouge, Louisiana) applies for another translator: 91.1fm, in Madison.

Southcentral

Greg Snyder, morning show sidekick at Religious/WVNI (95.1fm, Nashville) departs to form his own promotions company: "REJOICE! Productions". IRW wishes Snyder success in his new venture.

Southwest

Evansville news: OM Sky Phillips departs CHR/WSTO & Country/WBKR (96.1fm & 92.5fm, both Owensboro, Kentucky). No replacement has been named.

That's it for this issue! See you in two weeks...

========== Indiana Radio Watch ==========

I would think that the MP3 patent would only apply for people
broadcasting on the net in mp3 format. It seems to me that
having to pay patent fees for data that, at one point in
the process, existed as MP3, but is broadcasted over a good
old-fashioned analog radio transmitter, is just silly.

Like, what if the composer, used MP3 files in the creation
of his patches for his music? Does that mean you'd need
to pay MP3 patent fees to broadcast it? Does any use of
MP3 in the production process contaminate the music, and
then require MP3 for broadcast? Analog stations shouldn't be
covered by the patent, and if they are, I think it's worth
fighting by your trade associations or however you guys do this.

1597. Ogg Vorbis, A *Free* Alternative To MP3/MPEG

Newsgroup: rec.radio.broadcasting
Date: 2000-04-11 00:00:00 UTC
From: dsembr01@ox.slug.louisville.edu
Message-ID: <slrn8f7k3l.dg7.dsembr01@ox.slug.louisville.edu>
Source record: 20050
Cross-posted to: rec.radio.broadcasting,alt.radio.broadcasting

http://www.xiph.org/ogg/vorbis/

I'm posting this link to {alt,rec}.radio.broadcasting because there's
been some discussion about whether those who use MPEG to broadcast
their radio stations are subject to fees.

Ogg Vorbis is a project to create a 100% free audio CODEC for high
quality audio and music at fixed and variable bitrates. By 100% free
I mean it will be free of patents, royalties, licensing fees. It will
be a fully open standard, and their implentation will be fully open
source.

I haven't yet had the chance to test any of the software myself, but
hopefully radio stations can save lots of money using this technology
instead of patent-encumbered MP3 files. Maybe we'll all just shut up
about MP3s in a couple years and use Oog Vorbis and not worry about
paying greedy companies money so we can get on with our business.

>

What they're referring to a report, or, maybe a rumor,
I'm not sure, that a company with one of the patents on MP3
encoding wants a 'per play/per listener' royalty for every time
MP3 is used to play a song. My understanding is that, right
now, nobody really knows exactly what the situation is
with MP3 patent licensing, but it seems that every once
in awhile, some company here or there, gets a 'you are
screwed' letter from these guys' lawyer. But, really,
I gotta' believe that conventional broadcasting is not
affected by this -- at least as far as playing MP3's over
the air.

I hear there are weird issues, as far as net broadcasting
is concerned with the DMCA, and the RIAA, as in RIAA
wanting a whole lot more money for net broadcastign,
but the MP3 thing is different, and unrelated to
copyrights, as far as I know. The mention of
copyright/patent is just a result of confusion
about all this.

I do wonder if a new 'digital radio'
standard comes out, if this kicks in new clauses in
the DMCA, and that radio stations will have to pay even
more, then. My understanding is that 'digital' broadcasting
is treated differently, and has more restrictive

rules.

> have to admit, that would be a guess on my part.

Yes, I wasn't suggesting that companies would stop pressing discs, just that they wouldn't need to mail out so many awful duds, or even copies for the new tunes.

As for 75-80%, I'd say that's conservative. In this day of megaconglomerates, I'd say closer to 90-95% have computers in studios.

Just look how quickly the distribution of national spots went to digital/computer, like DG. Much cheaper for agencies to stop sending tape dubs around, eh? And the computers followed.

I think that if companies were to stop pressing promos in a year or so (mixshow vinyl excepted) the stations would accomodate the change, just as in ad distribution. It might be a pain to dub songs to disc if you're still using CDs on-air, but it could happen.

Sounds a bit like the ploy someone was using last year about who owned the code that makes EAS "work". Broadcasters were getting letters about the hundreds or thousands of dollars they would owe these guys for the privilege of participating in the EAS system. A bit of a frightening honor to be sure. It amounted to mugging by mail, and didn't work. If anyone owed them anything it was the equipment manufacturer not the end user. Actually, they should have gone after the National Weather Service. I think they are the organization that "adopted" that company's scheme. But they must have thought that the broadcaster would be an easier target, because the guv and Harris were too big to bully. How's the saying go? "Millions for defense, not a cent for tribute!" If someone is trying the same bullying tactics with MP3 they're barking up the wrong tree. If Big Brother Microsoft can't stop software piracy, how do these guys think they'll be able to collect MP3 royalties or fees? Imagine if Phillips had pulled the same crap with CD players. They would have become wealthier than god, or would have killed the medium before it took off. I know nobody wants to be the test case, but that may be what it takes to make these jokers go away. I'd hate to see exciting technology and netcasting stifle and die because of these tactics.

> Someone may know more about this, but isn't it against the law to air an MP3
> without permission?

Reading some of the respnses to this original question....I hafta say GIMME A BREAK!

First the "format" (MP3) of the file isn't against the law. Just because something is an MP3 file format doesn't make it illegal. (Let's not get people paranoid!)

Second, it depends on *where* I got the original that the MP3 was made from...

If one of the stations in our company made the MP3 file from a disk in their posession and shipped it to us over the internet....HOW is that different from getting a taped dub by FedEx of same from such? (It ain't! And no one would be questioning wether that would be illegal.)

THIRD, considering the record companies are BEGGING us to play product from their label/catalog...I don't think leaglity is an issue. Especially since we pay a licensing fee to ascap/bmi for the priviledge of doing so.

Fourth, if the specific cut was "embargoed" and a stations ripped a cut off the internet and aired it...I think THEN the record companies would rightly so have a bug up their ass. (I wouldn't blame them.)

Also, considering they give us the CD's for free (just not in a timely fashion), I don't think it's an issue of the rec comps "losing revenue"......we would be hurting their sales revenues.

All that said....WHAT's the problem????

1606. MP3 licensing for broadcast

Newsgroup: rec.radio.broadcasting
Date: 2000-04-12 00:00:00 UTC
From: BLACK@HWS.EDU
Message-ID: <01JO53U7L1E00018WW@hws2.hws.edu>
Source record: 19962

A lot of issues are being confused here. Let's not confuse ASCAP/BMI/SESAC broadcast and web rites with the MP3 license. Our broadcast music licenses allow us to make recorded copy for air of any licenesed music. So, "carting" and now HD recording for playback off a CD or record is included in that rite.

MP3 licensing is a whole 'nother issue. The patent owner, licenses the MP3 coding scheme and charges a royalty on manufacturers and users of hardware that includes the decoding, and software that includes the decoding, and distribution mechanisms. So, Telos pays a royalty for using MP3 in their codecs, which is included in the price you pay for a Zephyr. The MP3 software, which is "freeware" is licensed (if you bother reading it) for personal use ONLY. You can not use it in the manner for broadcast or webstreaming without the proper license. So, if you are decoding MP3's and airing them, you are not legal. Through the year 2000, the owner will not charge any station, but is persuing and setting up a fee for radio stations and internet streaming. More information is at http://www.mp3licensing.com .

Radio and Records. Casey switched to R&R when he left Watermark to begin
"Casey's Top 40" for Westwood One. When AM/FM resurrected "American Top 40",
the decision was quickly made to keep R&R vs going back to Billboard.

For the Hot AC version, he uses R&R's Hot AC chart.. I assume he uses R&R's
CHR-Pop chart for the CHR version too.

>First the "format" (MP3) of the file isn't against the law. Just because something is an MP3 file format doesn't make it illegal.<

Certainly not, but you'd better have the proper license to use it. MP3 is software as well as content, and software needs to be licensed, otherwise its use is illegal.

>Second, it depends on *where* I got the original that the MP3 was made from...

If one of the stations in our company made the MP3 file from a disk in their posession and shipped it to us over the internet....HOW is that different from getting a taped dub by FedEx of same from such? (It ain't! And no one would be questioning wether that would be illegal.)<

MP3 software and content must be licensed. Tape dubs do not involve licensed software.

>THIRD, considering the record companies are BEGGING us to play product from their label/catalog...I don't think leaglity is an issue. Especially since we pay a licensing fee to ascap/bmi for the priviledge of doing so.<

Excuse me: YOU don't think legality is an issue? The owners of the MP3 software would beg to differ with you. The fact that the record companies want you to play their product does not absolve you of the legal necessity of licensing the software and content. The licenses obtained from ASCAP, BMI or SESAC are for royalty payments, not software licensing.

>Fourth, if the specific cut was "embargoed" and a stations ripped a cut off the internet and aired it...I think THEN the record companies would rightly so have a bug up their ass. (I wouldn't blame them.)<

...not to mention the owner of the MP3 software, if it was used in the rip. Failure to pay for a software license is just as serious as airing music without paying the royalty license.

>Also, considering they give us the CD's for free (just not in a timely fashion), I don't think it's an issue of the rec comps "losing revenue"......we would be hurting their sales revenues.<

Again, you're talking about two different issues. Yes, the record companies won't be losing money, but that isn't the point.

>All that said....WHAT's the problem????<

The problem is that since the advent of the Internet, too many people feel free to ignore the laws that protect intellectual property. Their attitude is "Well, it's on the Internet, so it's mine." You know perfectly well what

happens if you air music without obtaining the proper license so that royalties can be paid to the creators of that music Well, using software without a license is just as serious and subjects the violator to monetary penalties too.

All I have seen and heard indicates that it will pass Congress, but the question mark is the President. He's the one who appointed FCC Chairman Kennard, LPFM's proponent, so I would guess a veto is likely, which throws it back into Congress' lap to try to override the veto....usually an uphill climb.

<aiese@fas.harvard.edu> wrote:

>Good point, but is that to say that these copyright holders would object to
>me carting records for airplay purposes?

Yes. Depending on how many copies you make. I was a witness in a
lawsuit where the copyright holder claimed too many copies were made.
They included the copies on hard drives. Legally, they claimed one
copy could be made ("ephemeral recording"). Any others were subject to
a license fee.

If the copyrighted song appeared on more than one hard drive, a fee
would be required. If it was used in a promo and appeared again on a
hard drive, another fee was required. If you ran a logger tape, it was
considered another copy and another fee was needed.

Unfortunately, none of this is etched in law and is subject to
individual interpretation. To interpet it requires a gaggle of
expensive attorneys.

Nice to see the Airwaves-digest back "on the air"...

As to the question at hand...I might be mistaken, but here in the Washington, D.C. area, the only "Morning Mayor" we've ever had was Harv Moore, on the old WPGC AM/FM (Morningside, Md) back when it was the big Top 40 (today's youngsters call it CHR...) "flamethrower" in this area back in the 60s. Last I heard, Harv was in management of some sort (possibly still radio, but possibly not) in the Buffalo, NY area (but I could be wrong on both counts here, so I welcome anyone who can set the record straight.)

Also...while I'm thinking about it...Harv Moore (and WPGC, for which he may have been Program Director at the time), used to do some of the neatest promotions, back in the day when "promotions" on the radio used to involve more creativity than throwing money at people the way we do today. I remember the "missing W" contest, where the "mystery man" who "stole" the station's "W" could say the ID at the top of the hour...rest of the time, jocks said "PGC" (kinda like they say today). Listeners used clues to find out where in the D.C. area the "W" was being "hidden" (it was on a building sign...).

<sigh> Thanks for putting up with my reminiscences...

Cheers,
- Max

So does that mean that a company needs to send 4 copies of a promo CD single to a group of stations, or else they're breaking the law by carting it several times?

I have trouble believing that a court would actually believe this. Besides, how does a company know how many times you have something put on a hard drive? I know this isn't an excuse (well, it sort of is), but I wouldn't let outsiders through my hard drive.

How did this all come about, a disgruntled DJ?

Eric

1618. Central Ohio 1200 kHz rebroadcast of Columbus Weather Radio?

Newsgroup: rec.radio.broadcasting
Date: 2000-04-12 00:00:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <38F4FE57.5EA4@mindspring.com>
Source record: 19974

I am hearing a direct rebroadcast of the Port Columbus weather radio
right now (since 1800 DST) on 1200 kHz. I'm NE of Columbus and
place the source west of me and along the E-W line of route 161.

It's not particularly strong but easily picked up on a portable.

Some hobbiest doing a public service? Some combination of
images that hits multiple radios in my house? A new FCC service
authorization?

There's no 1200 kHz station within 150 miles, according to the FCC
database.

That's right, except the Hot AC version is *also* "AT20," the obvious difference
being some small lettering by the logo.

[clip]
<< It most assuredly is against the law. It has become enough of a problem that at least one branch of my company has banned the use of Napster, an MP3 ripper.>>
[another clip from a response]
<<Well, actually, it depends on your usage. First, "rip" refers to copying the contents of a CD somewhere, usualy onto a hard drive. I don't think the Napster program does this for you. >>
[end clip]

Napster DOES copy CD contents onto your hard drive. The entire legal battle over Napster is that it's basically a large FTP file-sharing program. When you download a song off of Napster, you're not getting it off of a central server -- you're taking it off of someone else's hard drive and downloading it to your own, where you can play it at your leisure and other people can download it off of your drive onto theirs.

Some highway rest areas have Part 15 AM transmitters that rebroadcast weather radio so that motorists can listen in their cars; in some cases the audio service is also available in the service building on a telephone handset. Another possibility is that some small town has a TIS that rebroadcasts weather radio.

Northeast - that places you not far from the airport. (For those of you not from Central Ohio, "Port Columbus" is not a municipality - it is Port Columbus International Airport.)

Might the city have some kind of service running on 1200 KHz?

>There's no 1200 kHz station within 150 miles, according to the FCC
>database.

I think the FCC's website is screwed up. I searched by city/state for Cleveland, OH and instead I got a bunch of stations with the letters OH in their callsigns.

I also tried searching by frequency for 1610. Cleveland broadcasts travel and special event advisories on that frequency. All I got was two entries, one for KALT in Texas and one for CFOS in Collingwood, Ontario.

Either the other reply is right (that this is a Part 15 operation at a rest area), or it's a new travelers information service station. I don't see any 1200 TISs listed on Bill Harms' site, but maybe it's a new one? TISs aren't licensed in the broadcasting service, but rather as local government utility stations, so they don't appear in the broadcast engineering database.

Napster deals with data that has already been encoded into MP3 format.
To 'rip' is to copy audio data from a Red Book-compliant CD directly
to a data file on a hard drive, bypassing the digital-to-analog
conversion required to actually play back the data. By the time this
data gets to Napster, it's already well past the 'ripping' stage. You
and Mr. Schweiger need to get your terminology straight.

And, for Pete's sake, use a standard quoting method. This <<quote>>
business, besides being ugly, is nonstandard and confounds some
newsreader programs.

"Rip" is short for "rip off," and it matters not where the source material came from. The point is that the material is used by other than its original purchaser, and usually without the proper licenses being obtained. Even if the Napster material is past the "rip," which is purely a matter of semantics, it's available to be copied or played back even if proper licenses have not been obtained.

The database *is* screwed up, but even if it was working you probably wouldn't have found this station, or the 1610 operations in Cleveland. The station Ron is hearing sounds like a travelers' information station. (TIS) And the ones in Cleveland certainly are - as the Atlanta, TX operation you mentioned (which isn't on the air) is the only U.S. station on 1610 that isn't a TIS.

TISs aren't technically broadcast stations. They're licensed by a different division of the FCC - I believe as local government stations, on roughly the same basis as the police department's two-ways. Some are also authorized by the federal government itself. Either way, they won't appear in the FCC Mass Media Bureau database because the Mass Media Bureau doesn't authorize them.

http://users.erols.com/wharms/tis/database.html has lists of these TIS stations.

>I know this isn't an excuse (well, it sort of is), but I wouldn't let outsiders
>through my hard drive.

You would if the judge issued a supoena. If you refused, you'd have
another, more personal legal problem. How many times have you seen US
Marshalls lugging computers out of buildings to be held as evidence?

The discovery phase of legal actions will ask all kinds of questions
of many different people, then pull together the discrepancies in
their answers. It's a fascinating process that can get you into even
deeper trouble.

>How did this all come about, a disgruntled DJ?

That's another animal, altogether. Any illegal activity in a station
is usually very public. If the company illegally copies software, for
instance, there are plenty of employees who know about it. All you
need is one angry fired employee to make a phone call to the software
association that monitors such things and you've got legal problems
that will cost far more than the cost of legally buying the copies of
software you need. Disgruntled employees can be very dangerous.

The bottom line is that you either settle with the plaintiff or you
take your chances in front of people who know nothing about your
business and hope you can win when you're accused of theft.

The most important terminology in Napster's case is theft. I think
they'll find it's a very fine line between actually ripping the CD
with the intention of swapping it illegally and being the conduit that
facilitates and encourages the illegal exchange of copyrighted
material.

I don't know how or where Rip/Ripping/CD Rippers came into our lexicon, or if the process even had its start with less-than-legal activities, but for today's broadcasters ripping is as legitimate as a low level production assistant carting every song in the Beatles' library (e.g..). It's a method of convenience and expedience with no illegal intent.

I tend to agree with you here, although it's fairly gray. Maybe Aol or your ISP is guilty for being that conduit also. Likewise, the Winamp people know that people use it for illegal music, so they're providing a tool as well. Maybe Yahoo! shouldn't be able to give you MP3 sites...

I'm just being the devil's advocate here. I realize that Napster is used predominantly for copyrighted music, but there's also a case for them distributing upcoming artists' music. (And they are pushing that now.) I don't think it's quite so cut-and-dry as you suggest.

Carting every song in the Beatles' library does not create an additional "use" of the copyrighted material requiring an additional license or fees. Ripping, in the absence of proper licensing, is blatantly illegal.

>Certainly not, but you'd better have the proper license to use it. MP3 is
>software as well as content, and software needs to be licensed, otherwise its
>use is illegal.

MP3 is *not* software; it's an audio coding scheme (Motion Picture Experts Group 1, audio layer 3). Individual pieces of software that implement the scheme are copyrighted just as DOS and Windows are copyrighted. However, the idea that Microsoft might go around charging radio stations a fee every time a song is played over the air from a DOS computer is absurd, and it is equally absurd to imagine the numerous copyright holders of the different pieces of software one might use to encode or decode MP3 files doing so. You pay the applicable fee when you buy the software; what you do with the audio that comes out of it is irrelevant.

>MP3 software and content must be licensed. Tape dubs do not involve licensed
>software.

Surely the software used in a DAT or CD recorder is licensed, and the license fee is part of the price you paid for the machine.

1646. Attitudes towards AM & Demise of LPFM

Newsgroup: rec.radio.broadcasting
Date: 2000-04-14 00:00:00 UTC
From: Alfredo Torrejon <alfredot@inetarena.com>
Message-ID: <Pine.LNX.4.10.10004132318400.16755-100000@inetarena.com>
Source record: 19902

During lunch today, I stumbled across an article on LPFM in a local paper (The Willamette Week). In the article, they mentioned that at one time there was an LPFM service, but it was killed off after heavy petitioning by NPR. Among other reasons, NPR was concerned about the public image of non-commercial FM broadcasters. Although it was before my time, I imagine that many of the old Class-Ds probably did sound very amateurish at times, and many of them probably broadcast on very limited schedules due to a lack of adequate staffing.
Twenty years later, AM is suffering from public attitude problems--people see AM as low quality (due to the poor fidelity mono audio delivered by most receivers), and many won't listen because they think that all they will hear on AM are dry call-in shows, all debating the same issues from the same perspective. The irony in all of today's situation is that the conglomerates that are keeping all those AMs on the air are also the people responsible for the continued demise of the band. So far, only a few independents in the smaller markets have done anything to challenge the notion that AM is inherently low quality--KCJJ and KOFI come to mind. Why have we not seen conglomerates and the NAB mount a campaign to get receiver manufacturers to comply with AMAX standards?
Just a few hours ago, I heard a news blurb that the LPFM bill had been voted down in Congress. I guess the NAB lobbyists got their way. It's too bad that the NAB can't focus on more productive efforts--like reviving interest in AM or trying to bring more former listeners back to radio.

Right. Just as it was absurd for Microsoft to change OEM's a fee for their OS, regardless of whether each computer came with it or not. No matter how absurd it seemed, they did it anyhow.

>You pay the applicable fee when you buy the software; what you do with the audio that comes out of it is irrelevant.<

Exactly my point. You pay the freight and make it all legal. However, putting that stuff on the Internet will inevitably result in lots of copyright violations, because of the all-too-pervasive attitude that if something is on the Internet, it can be had for free.

I went there. I searched on a down and buried artist - Frank Sinatra.
Virtually every song he released is illegally available for download.
So much for promoting upcoming artists. The argument that they're
facilitating something other than theft of intellectual property is
pure bovine waste.

Organized crime has always had "legitimate" businesses. Even Nicky
Krasnikov (Russian mobster in "Beggars & Choosers") has a vegetable
business as a front.

Supposing they were "sharing" naked pictures of kids? The legality of
the process is the same. It would simply be more of an emotional issue
than stealing or victimizing a large corporation or a wealthy
performer. It's still theft. It's still unethical.

Maybe I'm just old fashioned, but I've never found basing the
foundation of a business on theft to be very solid.

I realize it's a lot of fun to read all kinds of conspiracies into the
lack of media coverage of LPFM. However, the real bottom line is that
very few people give a rat's posterior about it. They're far more
interested to learn about which celebrities have three nipples.

It's just not a mainstream issue. Even the FCC raids on pirates don't
rate much coverage. It's just not very interesting to the general
population. Most people are happy with their favorite radio stations.
I know you don't want to believe that, but it's true.

Except for people on this list I've never had anyone ask me about
LPFM. Most of them want to know if I've ever met Howard Stern (yes).

Only radio groupies care.

I would disagree with that. It's how the file is used that makes it
illegal. If I "rip" a CD because my digital automation system uses MP3
files rather than .wav or some proprietary file structure, I'm still
using something I own and have the right to transfer it, once
(ephemeral recording), to my system's hard drive.

I do not have the right to take the resulting MP3 file and distribute
it to friends on the Internet.

If I "rip" a CD so I can listen to it on my Rio player I'm within my
rights to do it. I don't think it's any different than making an
analog cassette of a CD for my own personal use. I don't have the
right to give that cassette to a friend.

Once again, the best Congre$$ that money can buy has spoken. Heaven forbid, someone should dare to even THINK about intruding on the NAB's radio broadcasting monopoly.

Is Ramsey Electronics a publicly-traded company? Now would probably be a good time to purchase some of their stock.

umar <umar@world.std.com> wrote:

>MP3 is *not* software; it's an audio coding scheme (Motion Picture Experts
>Group 1, audio layer 3).

It is also a patented process. Process patents cover all aspects of
the practice of the claimed process; i.e., if you use a patented
process, you must have a license. Normally, as you point out, such a
license would come bundled with the software or hardware you purchase
to perform such a process. This is not always the case, however; as I
mentioned in a previous article, the standard licensing terms for MPEG
require licensees to pay an additional fee when they distribute
MPEG-encoded programming fixed in a physical medium, such as a DVD.
(This practice is not enshrined in their patent rights, but is
specified in the contract for licensees of the encoder.)

Again, see <http://www.mpegla.com/> for specific details.

Very true, but we're talking about using it on the air, and as you've stated in another sub-thread, the possibilities for illegal use are all too blatant.

Rich was right when he said that the LPFM issue got no coverage because no one actually cares, and they're happy with their favorite stations. Sadly, the same applies to our discussions of consolodation and job losses. Some of the most active talk listeners that I know are aware of consolodation, but it doesn't affect their daily lives. Mix 107.7 was there before consolodation, and its still there.

1667. Mega Grabs A 2nd FM in DC area

Newsgroup: rec.radio.broadcasting
Date: 2000-04-14 00:00:00 UTC
From: Dave Hughes <fuzface@ix.netcom.com>
Message-ID: <xnNJ4.46661$E85.874073@news1.rdc1.md.home.com>
Source record: 19923

DCRTV learned 4/14 that Mega Communications is about to make a second DC area FM acquisition. This time, it'll pick-up hot adult contemporary with a tinge of modern rock WPLC, Warrenton VA, on 94.3, to complement its new 92.7 signal from Prince Frederick MD, which is set to debut in June. A 94.3/92.7 combo certainly would give Spanish language Mega more-or-less blanket coverage of the DC metro on the FM band. Expect a formal announcement of the "Mega-ization" of the mid-powered FM facility (which WTOP used as its FM relay in late 1997 and early 1998 before moving to 107.7) on Monday 4/17. Earlier this week (further down this page) Mega got rid of two of its area AMers (WZHF and WKDV).....

How do you define low quality? Programming or Technical? I don't really see how large corporate radio companies have degraded the AM band. If the programming is so bad why doesn't AM have fewer listeners? From a technical standpoint, corporate conglomeration was the best thing for AM in the last 30 years. Since I joined Jacor (now Clear Channel) I've participated in the improvement of a number of formerly independently owned facilities. Most of them were built in a rush on a shoe-string budget and it shows. Beyond that they were not maintained because of bottom line cost cutting. We take VERY good care of our technical plant and pass as much bandwidth as we are allowed by the FCC. Don't blame Clear Channel, Infinity, Disney, etc. for the crappy consumer radios that are being purchased and manufactured.

I do find it interesting that you want to draw corollaries between LPFM and AM though. Keep in mind that the poor sound of AM that you're complaining about is a direct result of poor decision making by the FCC when they reduced the bandwidth of AM stations from 15 to 10 kHz so they could fit more stations on the band.

It's a shame that the Telecom Act allowed the current oligopoly to take place, but further diminishing the integrity of the public bands is not the solution.

Clear Channel will soon be the owner of AMFM and their 1260 WGAY-AM (ex
WWDC-AM), won't they?

If so, PLEASE fix their AM antenna!!!!!

For more than 5 years it has had an intermittent when the wind kicks
up. I live SW of Rockville, MD, near a pattern null, and the signal
strength frequently jumps up and down 20 dB or more during these
periods. The station is unlistenable at those times. I talked to the
chief engineer maybe 5 years ago and he knew about the problem. There
were rumors about 6 months ago that the problem had been located, but it
still existed the last time I listened on a windy day.

> Au contraire. You thoroughly misread my points,

No, in fact, I didn't. You even agreed that listenership peaked 20 years ago. That, my friend is a decline. That alone makes my point.

> and obviously don't understand basic statistical comparisons.

With all due respect, you are neither qualified, nor invited to TELL me what I do and do not understand. However, this is in fact, illustrative of my point, so I'll thank you now for bringing it up.

We can argue statistics if you wish. When I worked for AT&T statistics was my department. In fact, it was my job to take an $80 Billion company with record growth and find numbers that would paint a picture of losses, and decline. There was a saying in the department: "Numbers never lie. But a the best con always starts with numbers."

Statistics do in fact, never lie. However then don't tell a story, either. They are only statistics. And oddly, the most divergent arguments begin with exactly the same statistics.
Interpretation of statistics is a fine art. A black art at that, often based in science, but frequently removed from reality. The best statisticians I've ever worked with take a step back from the minutiae of numbers and see just how the big picture really looks. In that moment, there are usually fundamental conflicts between reality and the numbers that are bridged by assumption. Also based in science.

That said, your foundation of your statistical premise is the listener. The assumption is that they already participate in a radio audience. That is becoming more and more not the case as is evidenced by the very numbers you present here. You even yourself said that listenership peaked in the 80s. That was 20 years ago, and since, in decline. Among listeners, participation may be at 40s level, but there are whole blocks of mid demo former listeners that are no longer involved in radio at all. I can name a dozen people who, like me shared hour after hour with radio, day in day out...but now listen to CD's or Cassettes. Or in my case, International radio.

I rarely listen to domestic radio at all. BBC WorldService, Deutsche Welle, Radio Nederland,... run the list. At home, at work, even in the car. Yes, IN THE CAR. On my car radio. The one that also has the CD player and the Cassette machine. In fact, I don't even have domestic radio on my presets. Except for the public stations, which also run BBC World Service. And I"m far from alone. But that's not my real point. That wasn't the point of my original post.

My point is that radio is doing what is good for radio. Keeping the budgets up, stock prices high, and business profitable. As a good capitalist, I have to admit, all good and solid motives. And in the US, since the very early days of amateur experimentation with broadcast, radio has always been commercial. Always. Always been about money. Always. And I have no problem with that.

But radio has along stopped even paying lipservice to audience. And long since stopped the process of innovation, in favor of formula. Sure. It works. But in a time when there are more signals than ever before, there are fewer choices. Homogenization through consultancy is everywhere. And it is based on a faulty perception of what the public really wants.

These decisions for what the public really wants are based on what the public already has. Research groups ask about current product, but don't spend deep hours doing what Tom Peters referred to as Naive Listening to hear what's really in their heads. First, they don't want to spend the time. Second, doing what they're already doing is too easy. Look at what they're doing, and then research the product and remove the negatives. Funny thing about that. Every negative is someone's positive. Remove all the negatives and you wind up with bland. More importantly, if you remove all the negatives, you wind up playing defense as a strategy. Against an industry that is also playing defense.
But if you spent time in a room when nobody knew who you were and no one knew who you worked for, and the subject managed to get onto radio, if you listen carefully among listeners talking in comfort and what they believe is confidence, you'll get a much different story than what the research tells. You'll learn how to play offense, instead of defense. You'll learn the value of those negatives you wish to remove. And the dark wonder and disdain for great songs that seen never to get onto playlists, because the research doesn't support them.

And here's a clue, New songs DO get tested. The research I saw everyweek for 10 years showed the results of new songs tested prior to add. Record companies test songs before they are released. Radio stations do callouts their contract research companies test NEW songs as well as old. We did it every other week. And we weeded out songs before the public ever got to hear them.

So why is there still listenership at all? What choices do they have? They, like radio, have in significant numbers, opted for a

least-devil course of action. Chosen the best of the options,
satisfied with none. Not all, but far from few.

Naive listening. Spend the time. You'll be amazed.

But the real crux of my original post came directly out of your
mouth. When asked, where IS the innovation? Where are the new ideas?

> > Innovation introduces an element of unfamiliaraty to
programming. This makes
> > the risk taking hard to justify.

So we return to formula.

> > When I travel, I generally look for predictable, reliable airlines and
> > accomodations and even restaurants. That is human nature. No surprises.

Your nature. The circles I run in look for out of the way, home
grown restaurants owned and run by locals. Accomodations run by the
people who live there, and decidedly out of the norm. Surprise is
not a negative. Good surprises are fun. Bad surprises are amusing.
You've not eaten at the Elvis Cafe near Camdenton, Missouri. If
you're looking for local colour, this is a Paisley tie.

>>Turn
> > the radio on and get what you expect, not the radio equivalent of a joke
> > store hand buzzer.

Again, to get what you expect is a pretty stultifying thing in
the long term. Even bad radio, locally done, is only relative. I've
heard guys that wouldn't be allowed to OWN a radio in Chicago, who
in their hometown are superstars. And they bring a freshness to the
dial. And many times, granted not all by far, but many times they
are as bright and as witty as anything on the air today. All they
need is the seasoning and the experience. Remember even Rush
Limbaugh had to start somewhere as green.

> > Why would Red and Blue net fare do as well in Philly as in Austin? Becuase,
> > aside from a few regional differences in accent and preferences for oatmeall
> > over grits, Americans are pretty predictable in entertainment choices. TV
> > networks and cable channels prove this, too. How much local TV is there that
> > is truly different form one region to another? None.

That there exists none, doesn't mean there isn't a taste for it.
Again, simplicity and profit simply meant the choice is not
presented. That there isn't local TV different from one locale to
the next, isn't the issue. It's that there isn't much local TV at
all. This despite clear differences in viewing tastes from region to
region.
And yes, there is a difference in tastes between regions. Taht
the Red and the Blue fared well in Philly and elsewhere, is a matter
of options. There weren't many. Damned few. However, even in that
era, there were differences in taste that resulted in overwhelming

audience reaction. The most famous was Welles' Mercury Theatre Presentation of War of the Worlds. Welle's broadcast what amounted to a disclaimer at the beginning of the broadcast. It was a clearly presented introduction, and a clearly presented set up for what was to follow. But few heard it. He was up against Bergen who was the ratings juggernaut. Bergen brought out a singer early, and audiences mostly in smaller areas, tuned out. Listeners in the big cities tended to stay put. Listeners in suburban and rural areas tuning across to CBS, heard what appeared to be News reports. And the panic was on. Phones lit up, and calls were placed not only to CBS, but to family and friends in the bigger cities. The panic spread from the outlying areas in....not uniformly.

Nielson's own figures showed that in network fare the cities, used TV differently than the country. THe South differently than the North. Dukes of Hazard was NOT the ratings juggernaut it was sold to be, because it didn't play well in the larger cities. It didn't play well in Northern latitudes. But it was a monster in the South. The entire rural line up of CBS, Beverly Hillbillies, Green Acres, Petticoat Junction, displayed similar regional preferences. That the shows fared well on the networks was not in that they were universally embraced, but that the numbers were large enough for the networks to allow them to continue running. Similar examples exist every year in the Neilsen numbers.
It would be folly to believe that these differences didn't exist in radio as well. Else why isn't Howard Stern number one in every market? Why isn't Dr Laura running everywhere with dominant numbers? Its' not that the differences in regions or cities don't exist, its that they are being ignored for the sake of convenience. For the sake of profit, and stock price. To state that US listeners are broadly uniform in tastes and preferences, is to fly in the fact of the facts.

All of which is trivial to the point I made at the outset. To wit: LPFM wouldn't have made a fleasnot's bit of difference to commercial broadcast, except in the area of interference. And in most cases, the listenership would have simply moved to a different spot on the dial, becasuae they are not involved. Radio is being presented as a commodity, without loyalty or commitment to the listeners, in may cases with automated syndication, and no local service commitment, (again: weather alarms that were never sounded becasue nobody was minding the store?)
Why would the listeners care.
And with so many radio entities consolidated into one company in a market, radio no longer has to go on the offensive to keep market share, it only has to play defense. It doesn't have to serve, it only has to not offend. It doesn't have to create, it only has to convince that what it offers is exactly what the listeners want. And stick to the story. And it will do just fine. A legend in its own board room.

Step back from the minutiae. Look at the big picture.
Listenership is down. You've said it yourself. You should be asking 'why?', instead of quoting figures. It's because somewhere, they're not doing the job.

LPFM was defeated. But even IF LPFM had passed, it's far too late for it to have had an impact on current trends and the current faceless colors of
broadcasting. They're not going to change, because they don't have to. Because they're doing what's good for radio. The listers are only there as a sales tool.

You're a bright guy, David. Step back. Take a good look. Ask the questions that are heresy in a radio station today. Stop looking at the statistics, and unravel yourself from the minutiae, and take a step back. Look at what's really going on around you.

You said can't afford a Ferrari. And you wouldn't want one anyway. Like the man said in the staff meeting, "Nobody needs a Ferrari, until you drive one."

Drive one. You'll be surprised at what you can afford. When your thinking changes.

Personally, I prefer my Lotus.

news:38F91B53.52DEAD45@worldnet.att.net...

I'm skipping the statistics stuff as I don't want to start parading out who has more course credits... A radio station does not do research to cook the books, but rather to find out the easiest, most cost effective manner to reach a viable, salable audience sector. If there were osme reason to cook the research, I've not come across it. The research is proprietary, seldom published even for sales purposes, and benefits no one if poorly done or interpreted.

The point is that you were claiming that Americans listen to less radio. In fact, that is not true. They listen the same amount, on the average, that they did 50 years ago.

> That said, your foundation of your statistical premise is the
> listener. The assumption is that they already participate in a radio
> audience. That is becoming more and more not the case as is
> evidenced by the very numbers you present here. You even yourself
> said that listenership peaked in the 80s.

The peak year was, in fact, 1987. That was 13 years ago. The 1983-1987 period for some reason had a hump of upward listening, which completed its downward leveling last year. IOW, 1980 has the same levels of listening as today. 1987 was the top of a peak, caused probably by greater leisure time and few leisure alternatives. There is a graph of this at Jim Duncan's site, and some analysis that contradicts my own, but is well reasoned if a little to focused on the stats themselves and not on the dynamics of humans that listen. Worht a visit if you are interested in the subject.

That changed going into the 90's, with cheap video and computing devices and an economic uptrend that resulted in the average American working more hours a week.

>That was 20 years ago, and
> since, in decline. Among listeners, participation may be at 40s
> level, but there are whole blocks of mid demo former listeners that
> are no longer involved in radio at all.

The one group that goes below 95% weekly usage of radio is the over 65 crowd. I write this up as much to advertiser disinterest as lack of programming and lifestyle issues. The fact is, 18-34 year olds, the group most involved in new media, is also the most active user of radio, with somewhere around 24 hours weekly.

Thereis no group that is not involved in radio. Every under-65 demo listens to the tune of 95-98% weekly cume. And, the groups that are less active in

new media, segregated by both age and ethnicity, tend to listen even more. For example, in market #13 where internet usage is less than half the national average and there are fewer cable and satellite options fo rhte general public, radio usage for the market is around 26 hours.

>I can name a dozen people
> who, like me shared hour after hour with radio, day in day out...but
> now listen to CD's or Cassettes. Or in my case, International radio.
> I rarely listen to domestic radio at all. BBC WorldService, Deutsche
> Welle, Radio Nederland,... run the list.

The fact that you are in this group sets you aside form the 99.99% of listeners who care about the message but not the medium. The fact that you liten to shortwave sets you apart form almost everyone. A number of years ago, I was involved in the actual tabulation process of a radio survey that used huge quantities of interviews (8% of the 13+ population per month) and no recall. Out of the 30,000 interviews I reviewed for one month, there was not a single mention of the Voice of America, despite the marekt being targeted with 18 hours a day of VOA programming and another 6 hours of Special English. Shortwave has not been a "popular" medium for at least 4 decades in this hemisphere...

All I'm saying here is taht your tastes are very special, and it is unlikely that you would find anything that would be profitable to a station owner that would interest you to the point of achieving your holy grail of "loyalty."

>At home, at work, even in
> the car. Yes, IN THE CAR. On my car radio. The one that also has the

Again, you demonstrate extremely eclectic tastes. Equating your tastes to the general population that likes Puff Daddy, Ricky Martin and Dixie Chicks is not productive and will lead to erroneous conclusions. Just because you don't like something probably means that there will be al lot of people who will!

> what the public really wants.

Strange, but I talk to a lot of people in different radio companies frequently. While some are concerned with consolidadation, that is mostly in the areas of career track issues. MAny like having retirement plans for the first time and decent insurance and such. The days of 7/7 did not allow owners to offer much of anything, so that part is good for the business.

As to programming, I agree with Mark. With around 12 thousand stations in the US, we have several sets of players. First, a couple of thousand non commercial stations, with diverse motivation and very narrow focuses. NPR and Pacifica come to mind immediately. Then, we have commercial religius stations... essentially out to provide a paid foum for teaching and preaching with a few music options tossed in. Then, there are ethnic staitons, Spanish language, Asian, Polish and Urban. There is considerable innovation here, as the audiences are growing and the formats are subdividing quite creatively. The rest of the group consists of mostly talk and nostalgia AMs, and music FMs with fiew exceptions. The AMs have created quite a bit of momentum with sports talk, new forms of non-political general talk and feature programming. Innovation here is pretty good and it sure saved the band.

On FM, there are far more stations in nearly every market. Some are pretty rubber stamp, but I see tons of diary comments like "It takes the boredom out of my workday"and such for these soft A/Cs and such. There is enormous variation form market to market, but many are exciting, and others are, if not exciting, useful to the target listener.

The real problem is: too many stations for the market to support viable in the smaller and rural markets. I have seen all local programming disappear from places like Lake City, FL, for example, after the number of local signals trippled. So, the alternative is satellite delivery and cost cutting. Innovation will not make a market of 30,000 support 6 stations.

> research doesn't support them.

I have done this, several times, and to my infinate dismay. I was always beaten by a staiton that did its homework and played what the bulk of the listeners could agree upon. Fortunately, I have not done this for about 15 years and both me and my stations are better off for my ability to restrain myself for imposing my taste on their radio station. I have even come to the time I have had to toss out a research project and send it back into the field becasue it was questionable and the direct listener feedback caused me to be a skeptic. But I will never take it on myself again to dictate taste to the listener, as that attitude is, truthfully, full of arrogance and superiority.
>
> And here's a clue, New songs DO get tested. The research I saw
> everyweek for 10 years showed the results of new songs tested prior
> to add.

Where ever you saw this, they were not doing what is generally accepted call out procedures. You can not research a song based on a first reaction to a 7 second hook, which is a reasoned response. You have to wait till the song has had the opportunity to become familiar and then get an emotional response based ont eh song hook triggering the feelings associated with the song itself, not just the hook.

>Record companies test songs before they are released.

Proof that it does not work. 95% or better of all songs released stiff. Probably close to half the adds at an average staiton do not last 10 weeks. (milage may vary by format, market and PD. Not valid in all states. Other restrictions may apply.)

>Radio
> stations do callouts their contract research companies test NEW
> songs as well as old.

Many stations do their own callout. In fact, I';ve never done it any other way since I was introduced to callout in the late 70's. In any case, when a station does callout through a center or third party, the staiton picks the songs to be researched. Normal is to thest all currents, new adds after a week or so, and a selection of recurrents that have dangerous burn on them. Average is probably 25 tunes. I've never seen anyone test brand new songs before playing, but someone may think that is a good idea. I don't.

>We did it every other week.

Fairly typical in a small-medium market. Larger markets will do once a week, or even 3-day cycles. Also depends on the importance of currents in the format and the tendency for these to burn really crispy if not watched nearly on a daily basis. Some stations do one test every three or four weeks, sharing a center with co-located stations or a corporate center. Whatever works is the rule, and there are no engraved in stone ones.

>And we weeded out
> songs before the public ever got to hear them.

I think that this is a really dumb idea. You can not tell how a listener will react over time to a whole song by playing a snippet. The fact that I have not heard of this being done is probably witness to the fact that very few are doing it. Every new song is negative at the beginning as people listen, in thier majority, to the radio, for familiar favorites. A new song is neither familiar nor a favorite. Two strikes.

> You've not eaten at the Elvis Cafe near Camdenton, Missouri. If
> you're looking for local colour, this is a Paisley tie.

If I am 89000 miles from home trying to get an important project done, I don't want to have pleasant and amusing lunchtime experiences or to have pieces come off the plane. In the early 80's, I did international consulting and put 2 million miles behind me on Lloyd Aero Bolivia and Faucett and Ecuatoriana and Viasa and Taca and others long, long gone. Not rewarding, not productive. Eating a new recipe for tripe and rinking coke tea may have been a good purgative, but not conducive to expeditious business. Now, if I'm digging in Tikal or exploring in the Andes, I'll take the unique and unusual, because I want it and have set time aside for it.

Like me, the listener generally wants predictability and a bit of amusement, not something that is unfathomable complicated or unexpectedly strange. Knowing how far to go is what makes Stern, Rush and even Mancow good.

> Limbaugh had to start somewhere as green.

I've probalby been as involved with major radio talent as anyone, including thier discovery. Still, there is a point to recognizing what is banal on one side and just too off the wall on the other. Unfortunately, in markets that

have dozens of stations, we can't do much on air training.

> region.

This is a bit too Alice in Wonderland, I-could-if-I-would. The fact is that stuff has been tried, does not seem to work and what you see is what you get. There are folks running around every day trying to finde the cure or panacea for ailing TV and radio staitons, and there is probably a message in what is not been done that screams even louder than the one that lies in what is already on the air.

> networks to allow them to continue running. Similar examples exist
> every year in the Neilsen numbers.

PArt of that is stratification. Some programs are designed for specific audiences. "we'll win the places the ther show does not."But, still, the acceptance of all these shows has been high enough for the NY affiliate to keep the hillbillies and the MAcon affiliate to keep the inner city cop show. The differences are in degrees, not in absolutes.

> It would be folly to believe that these differences didn't exist
> in radio as well. Else why isn't Howard Stern number one in every
> market?

MArket composition is one thing. In LA, he is top 5 because two of the top 5 are in Spanish and antoher is Rick Dees, a very talented local host.

Not every market has 38% Hispanic population and strong local morning shows that eat the same demos. Mancow, to mention him agian, does in Stern in Chicago and a coupule of other places. Good local talent will, if not win, frag Stern, particularly if there first. OK, for those from Philly, remember I said "good." Debella was not proven to be good.

>Why isn't Dr Laura running everywhere with dominant numbers?
> Its' not that the differences in regions or cities don't exist, its
> that they are being ignored for the sake of convenience. For the

> the facts.

Dr. Laura gets good numbers relevant to the signal she is on and the dominance of the staiton she is on. In San Antonio, she was on KTSA against Clear Channels flagship station.. and won because KTSA is a good station. If she is one some lame facility with terrible promotion, no local news and service and the other elements that a good N/T need, then she will not perform as well. But she generally outperforms anything similar nearly everywhere.

Fair statement, except that you have to exclude the considerable number of stations with a commitment, with news departments, with thinking programmers and management. there are plenty.

> Step back from the minutiae. Look at the big picture.
> Listenership is down. You've said it yourself. You should be asking

> not doing the job.

DOwn relative to a peak in the late 80's. And, to me, the "downness"is surprising ly light, given the percentage of stations that have higher commercial loads, plus the many new entertainment choices people have, starting with this toy, the computer.
>
> You're a bright guy, David. Step back. Take a good look. Ask the

I constantly steop back, as I wok in one of the most diverse sets of markets of anyone on this group. Outside the box thinking is required in ways taht

in the US are not even considered. However, I did learn that the listener does know what they want... and I'm not going to try to give caviar at the cookout or serve the tripe I mentioned at the Israel Bond fund raiser. There are limits each way.
>
> You said can't afford a Ferrari. And you wouldn't want one
> anyway. Like the man said in the staff meeting, "Nobody needs a
> Ferrari, until you drive one."

I have driven one. I did not like it. I'm a Land Rover/Jeep type of person, coming from having driven mountainsides with no retaining barriers for many years. Little low cars are creepy to me. I'd rather put my money in the market, even Friday's market, than have one of those. No one can afford what they don't want.
>
> Drive one. You'll be surprised at what you can afford. When your
> thinking changes.

I can afford what gives me pleasure. For a while, I had a nice sailing craft... and it was not expensive. when I tired of the drive to the marina, the nasty weekend power boaters and the constant freeloaders, it suddenly looked expensive. It's all in the perspective.
>
> Personally, I prefer my Lotus.

I gave up Lotus for Excel back in the 80's. (I know... just trying to end on a light note.)

First, I don't suggest that a radio station cooks the research.
As you correctly state, that's contrary to purpose.

And without going down the list, you have, once again, made each
of my points for me.

The conclusion of which is still, that formula works, and radio
has found it easier and safer to rely on what it's already doing,
and to genericize, than to bring innovation and fresh thinking to
the dial.

And that as long as the profits hold out, LPFM would make no
difference in the way radio does things, and in the long view, would
not be a viable threat to commercial interests except in the areas
of interference.

AND, that you drove the wrong Ferrari.

p

PS: My Lotus can drive under your Land Rover.

Most of the listeners are not as involved with their radio stations as they were in days gone by. And total share of the marketplace has never been less. Recent studies have produced some interesting results. To most it's background noise. To many it's anesthesia. To some it's anti-loneliness therapy, and to a few, it's the only friend they have. Only to those that are heavily involved, is there enough interest in what's going on behind the curtain, for them to take a participatory interest in ownership, or collateral issues like LPFM. Listener loyalty is at an all time low. In many cases, if the station dries up and goes away, they'll find another. Usually in the same format, but often not. In Chicago, when WKXK went away, their country audience did NOT return to US99, they instead went to talk. Changes on the dial meant an opportunity to sample new fare. And loyalty wasn't an issue.

LPFM mattered to broadcasters. If listeners knew of it, they were interested in the business of broadcasting, not the programming. Lord knows, the programming has lost most of it's interesting character anyway.

Let interference become an issue, and the listeners may complain. In many cases, not. And broadcasters know this.

The truth is that NAB raised some valid points about LPFM. What wasn't addressed, is the fact that if you're doing a good job of putting compelling programming on the radio, the AUDIENCE will make an issue of any objectionable interference. Broadcasters have known for years that they weren't doing the job, that research and lowest common denominator programming are the path to easy profits, but not great radio. Formula, not programming, has become the brand. In such an environment, there is a strong danger to profits and stock prices when the threat of interference is raised. When you're only passing along a generic product, instead of manufacturing your own,

you have reason to fear threats on every front.

Personally, I think that LPFM would have been a wake up call for commercial broadcasters only if LPFM had been distributed throughout the dial. But concentrated on the low end, it would have been a threat to Non-coms and Public radio, where the only real alternative programming was anyway.

But even if there had been LPFM throughout the dial, the age of consolidation is here, and the dominant companies have been allowed to become near bulletproof in the absence of meaningful resistance. Even IF LPFM had passed, it's far too late for it to have had an impact on current trends and the current faceless colors of broadcasting.
Only a revolution in listener expectations will do that.
And as long as a listener's CD Walkman, or Rio MP3 player can play exactly the listeners favorite song exactly when the listener wants it, and broadcasters are unwilling or unable to offer more than an over researched diet of bland with a white sauce...things for radio are only going to continue to erode.

The final scenario will be 5 channels, 5 formats, 5 radio stations. You know, like the BBC has been doing for 3/4 ths of a century.

1676. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.broadcasting
Date: 2000-04-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8d8qi6$5nm$1@news.hawaii.edu>
Source record: 19928
Cross-posted to: rec.radio.broadcasting,rec.radio.cb,rec.radio.info

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

[OT cheap-shot follows]

From 'Chris Weiss':

>Don't blame Clear Channel, Infinity, Disney, etc. for the crappy
>consumer radios that are being purchased and manufactured.

I wouldn't dream of it. I only blame the big broadcast holding companies
for the horse manure that passes as programming these days.

Oh yeah, Chris. Come to Cleveland and listen to WMVX cut off half of the
songs on their playlist a minute early. As much as I like many of the songs
the Mix stations play, that kind of crap is absolutely inexcusable -- but I
guess it's ok if it saves the company a penny or two.

Incidentally, WQAL, which is being sold by AMFM due to the AMFM/CCC merger,
ran the required message about the sale this evening. In-between the
announcement that the sale was pending, and the final paragraph stating that
the public file is available for viewing during normal business hours, the
announcer described Q104's pedigree... owned by AMFM something-or-other, LLC,
which in turn is owned by a trust, which is owned by another company with the
sole shareholder being *another* corporation, and so on, and so on...

I had to check the date to make sure it wasn't April 1st.

Wrong. There was a peak in listening in the mid to late 80's, but current levels are at the same number of weekly hours per listener that the were at in the late 1940's... approximately 21 hours a week. In fact, among younger listeners, the levels are around 24 hours weekly, a high. The only decline is in listeners at the high end of the demos, making one speculate whether the advertiser focus on 25-54 has caused a near total abandonment of the 55+ listener except by talk stations.

>Recent studies have produced some

What studies are these? I have not seen anything remotely similar and I think you are jumping to conclusions on your own.

>Only to those that are heavily involved,
> is there enough interest in what's going on behind the curtain, for

> issues like LPFM.

And, back in the "glory days"of network radio, when nearly everything came out of a handful of network studios, did we see a greater listener involvement in broadcasting? No.

> Listener loyalty is at an all time low.

Statistics. I can come back with indications that loyalty to specific formats and staitons, in many cases, is very high due to specialization and better targeting of individual tastes. In any case, loyalty to the radio genrally lasts as long as you don't play too many tunes someone does not like or talk about subjects that bore them.

>In many
> cases, if the station dries up and goes away, they'll find another.

> went away, their country audience did NOT return to US99, they
> instead went to talk. Changes on the dial meant an opportunity to
> sample new fare. And loyalty wasn't an issue.

Right answer for the wrong reason. Almost never does a surviving station pick up the total shares of a direct format competitor that goes away. There is something in the listener dynamic that reduces format shares when the number of choices are reduced and grows the shares when the number is increased.

Example... in 1997, there were about 6 to 7 shares in Los Angeles for one specific format being programmed on two stations. A new station came on, and since mid-1997, there have been 111 to 12 shares for that format... with all three stations sharing about 90% of each other's playlists. The pie grew, rather than being sliced thinner. I have seen this countless times, as has anyone else who spends any time reviewing format and market trends.
>
> LPFM mattered to broadcasters. If listeners knew of it, they

> programming. Lord knows, the programming has lost most of it's
> interesting character anyway.

On person's opinion. Sure there are some stale, mechanical stations. And there are some pretty good ones, and plenty of new options that did not exist just a decade or two ago. After listening to airchecks form the 60's and 70's this week, I don't really think that things are worse... just different.
>
> Let interference become an issue, and the listeners may
> complain. In many cases, not. And broadcasters know this.

They did not complain when the FCC broke dwn the clear channels about 30 years ago, and they did not complain when interference was increased by 80-90 congestion 10 years ago. When a listener finds interference, they change station. After all, the service is free and they have no commitment to a station in particular.

> great radio.

I don't think that all broadcasters think that, not even in dark little dreams. Many are pretty proud of what they do, and are happy to have cost-efficient research to help find what listeners really want. Research, by the way, is not evil. Research discovered a cure for many diseases and research in radio discovers what listeners rather than a bunch of supposed programming gurus wants to hear.

>Formula, not programming, has become the brand. In

Go to a supermarket or a Wal-MArt. Formula works. People around the country like good products, and seem to like pretty much the same good products nationwide. So what if the A/C in Duluth sounds like theone in Spokane? Individual listeners don't listen to both at the same time, so it is actually nice that a quality, targeted list of songs is available for those who like that format in both of those towns.

Rock-it Radio listeners club - http://www.rockitradio.net

Hello everyone,

Rock-it Radio show #158 has just been released. It is a presentation of Rare 50's Rockers from the era that gave birth to rock and roll!!! It is a typical mix of Rockabilly, Doo Wop and R&B that the Rock-it strives for and here is the playlist.

1. Goshmody Whatabody-- Glen Goza & Damongos 1956
2. Music to mey Ear -- Speck and Doyle (The Wright Bros.) 1956
3. Stingy Little Thing -- Hank Ballard & Midnighters 1960
4. You're barking up the wrong tree -- Don Woody 1957
5. Tryin to get to you -- Johnny Carroll 1956
6. Love you -- The Vocaleers 1954
7. Poor Jenny -- Everly Brothers 1959
8. Bird Dog -- Everly Brothers 1958
9. Knocked out joint on Mars -- Buck Trail 1957
10. Rockin' on a UFO -- Billy Lee Riley 1999
11. Put me Down -- Jesse Lee Turner 1958
12. '59 Volvo -- The Medallions 1959
13. Hot Dog -- Elvis Presley 1957
14. Little Bitty Pretty One -- Frankie Lymon 1960
15. Tell me Why -- The Rob Roys 1957
16. Dance with me -- The El Torros 1957
17. Fannie Mae is back -- Buster Brown 1958
18. Wolf Call -- Mark Anthony 1957
19. No One in my heart but you -- The Thirtythrees 1958
20. Satellite -- The Rocks 1957

To get to the show just go to our archives page at: http://www.palmsradio.com/rockittext.htm and click to show #158.

Real Player G2 is required to hear our shows but you can download it for free at http://www.real.com
~~~~~~

Rock-it Contests

Congratulations to Tony Hayward from Victoria, Australia who is our most recent winner and wins a Rock-it Radio T-Shirt with the station logo on the front of the Rockin' Cat. You must be a listener club member to compete in our contests.

The first listener club member that can tell me who was the First Person to record "Whole Lotta Shakin' goin on"?
~~~~~~

Hint: It was 2 years before Jerry Lee Lewis made a hit out of it --
and it was on the U.S. Decca Record label.

The first listener club member that can tell me who it was will
receive a free CD of Volume #3 of the Rockabilly Hall of Fame.
which was just released the first week of this month and you
can check it out at http://www.rockabillyhall.com
Just e mail us your answer to the studio here at:
Rockitradio@earthlink.net

If you are not a Rock-it Radio listener club member it's easy enough
to join and it keeps you in the know of what's going on here at the
Rock-it, and it's free! Just go to the top of our website at
http://www.rockitradio.net and at the top by the Listbot button
enter your e mail address, click the listbot button follow the
instructions and you are in!
~~~~~~

Rockabilly International Meet and Greet and
Viva Las Vegas 2000 begins
Next Week

Unfortunately, due to just too much work myself and Jammin' Jan will
not be attending this year. However, we do have our Rock-it Radio
correspondent Melissa Arenz go to both events and if you are there and
see a gal wearing a Rock-it Radio t-shirt chances are it's her --
Make sure you introduce yourself and say Howdy! And we will see
all of the Rockabilly crowd there in 2001!
~~~~~~

Links of the week

A couple of sites have come forward and we have swapped links and
think you might find them interesting and tell them of course
Rock-it Radio sent yah!

1. Of course anything Rockabilly has to be the Rockabilly hall of fame --
http://www.rockabillyhall.com

2. The Famous Sun Recording Studio -- http://www.sunstudio.com

3. A site of International Doo Wop interest is -- The Spanish
Doo Wop site -- http://www.spanishdoowopfan.com

~~~~~~

We are dying to get some more requests and dedications in here !!!

Remember to e mail us at:
rockitradio@earthlink.net

All the Rockin' best,

Bennie Dingo
Rock-it radio
~~~~~~

e mail: Rockitradio@earthlink.net

...and more importantly, I missed the story about how the technology was developed, and who came up with the idea in the first place. It's hard to believe I've been in radio for 10+ years and somehow missed this one. Can anyone enlighten me?

Anyone else miss them?

Granted newer technology makes the job easier... But there's something about stacking plastic carts and slamming them into the cart decks <not to mention dropping a whole bunch of them with an open mic...>

You didn't get the joke, Sid :-)

If this anti-LPFM legislation should indeed become the law of the land, I
predict we will see a substantial increase in unlicensed microbroadcasting
stations as a result.

Listeners levels the same as the 40s? And what has population
done since then? I'm talking about sets in use compared to the total
population. Raw numbers certainly are up...but in proportion to the
population that has access to radio, it's down.

There are books out. Dozens of them, describing how and why people
do and do not use radio. I'll let you do a search. You sound like a
bright guy.

No. Listenership, perhaps. Retention of content, and comment,
maybe. But involvement? No. There was more involvement in the late
60s when kids drove with one hand on the wheel, and one hand on the
radio. When parents fought for control of the radio in the house and
the names of disc jockeys were as close to top of mind as their own
kids. When two local rockers beat each other into near bankruptcy to
capture an audience, by innovation, service. Entertainment.
Creativity.
It's not happening today. Radio doesn't have to.
>

That's not loyalty. And it's not service. Targeting by abstention
is very different than targeting through pro active service or
innovation. The difference between Paul Prudhomme and Popeye's. And
when stations come and go, there isn't the dismay there once was.
The protests. The letter writing campaigns. Public acceptance of
the instant and radical changes has pushed radio out of their lives
at the level of personal involvement. You don't invest in a
relationship that you accept will not last from the outset.

I"m familiar with that phenomenon. It happens in almost all
industries. But it didn't happen in this case. When there was only
one country station, total lifegroup size was no larger than when
there were two. Total shares equalled the lifegroup. Total shares
with only one station were nearly the lifegroup size. With two, the
lifegroup was split 1/3, but combined shares of the two were
virtually the same as the total shares of the single station when
there was no choice. When the newcomer went away after less than two
years, total shares for the survivor remained the same as it had
during the period when there were two, and declined shortly
thereafter. Despite the fact that there were no other stations in
the format, and that the lifegroup, as determined by perceptual

studies, remained the same. Lifegroup didn't decline until more than
a year later. Country is one of the formats that tests high in
loyalty, and yet there was comparatively little loyalty in this
lifegroup.

> Example... in 1997, there were about 6 to 7 shares in Los Angeles for one

Which indicates that loyalty among the lifegroup is not an issue.
And that listening has become a matter of convenience, not a matter
of choice.

I'll agree, that the 60s and 70s were not so much better as
different, but I'll disagree that there isn't an overall mechanical
quality to radio. There have been more stations, and yet less
innovation. With a handful of consultants recreating images of their
successes in multiple markets and micromanaging the minutiae, there
is less innovation, and more uniformity, despite a larger number of
stations. And despite a greater pool of programming talent and
ideas. Not to say all ideas are good ones. I've been in the business
too long to be that naive.

Now, in the era of consolidation, we have one program director
and his attendant consultants micromanaging groups of station for
the protection of demographic bases, rather than for the capture of
audience with competitive innovation. Yes there are some great
stations out there. But they are fewer in proportion to the total
number of stations.
And the emphasis is on capture and protection of demographic assets
through marketing, rather than capture and retention of individuals
through creative innovation.

> to a station in particular.

Which is exactly my point. You'll notice I did say they MAY
complain. In most cases, not. I have fielded dozens of calls over
the years, when atmospherics brought reception to its knees in
Chicago. And the odd call or two from Alabama when KEEL didn't
change patterns on time in the evening. But that was all. Dozens;
out of millions of listeners. They simply go someplace else. It's
free and they have no commitment.

Odd in that light, how Howard Stern generates such fanaticism. Or
the names of Dan Ingram, Larry Lujack, Bob Collins, Harry Harrison,
Gary Owens, John Carney, were so top of mind, and so influential.
And had such huge numbers. But could be so quickly abandoned when it
was just too much trouble.
No Loyalty. No commitment.

There are exceptions. Rush Limbaugh is one. He's creative, and
innovative. He's one of the few who really GETS radio. And
maximizes the use of it's potential. Energy, creativity, thought
provoking, and highly counter to what was considered essential talk
when he started. Radio Disney is another. Serving. An application
of research coupled with counterintuitive thinking. Not a dominant
format, to be sure. But it sure does inspire loyalty. It stands for
something. And listeners respond. There are other exceptions. A
handful. The rest aren't trying. And don't believe they should.
>

>
I didn't say that all broadcasters think that way. And there are
those who are proud of what they do. I"ve seen small operations
refuse to sell to the corporate monoliths for that reason. But they
are few and very far between. And then I"ve seen stations with

breathtaking histories bought like cord wood, and stuffed 5, 6 at a time into a single building, stripped of their heritage, and reformulated into over researched, bland copycats. Then fail. Successful ones, with heavy community involvement. Gone. I've seen this countless times. Successful radio stations that didn't fit the pictures in the boardroom.

Interesting thing about research. It does indeed find what listeners want to hear. Or so the researchers are told. But if you look closely, the questions and the results are all based on what a station is already doing. Find out what's being done and give them more of that. Ask general questions and breakdown current policies based on language that is often vague and indistinct. Define language based on a focus group of 8 people, out of a market of 8 million. What research doesn't do, is create new life. New spark. It destroys new or counter intuitive thinking, by simpy ignoring it, because there isn't a space for it on the questionaire. One morning man I worked with got huffy at a staff meeting when the GM and the PD produced a lot of research that said hammered him in perceptual. Never mind his huge listenership--RESPONSIVE listenership. He was told that he needs to be the GM of radio. He needs fall into line with what the research was saying, that the research was telling him what the people needed from him as a talent. His response was a classic: "Nobody NEEDs a Ferrari, either. Until they drive one." His message was clear. Expose them to something above the common standard, they will respond. That you can't improve the customer base by lowering the bar.

Research allows customers who do not understand the potential of a product to shape its destiny. It also allows customers who have never been exposed to an above average product, to reject it out of hand. New thinking requires exposure and time for acceptance. Research many times doesn't permit that.

An analogy is the car business. Research has created more reliable, more comfortable cars, but there is no spark. No creative breeze. Uniformity has resulted. Hell they even LOOK alike. And the product is virtually disposable. Shaped by customer research. Designed by someone's CAD program. And then you have Dodge, which fields a truck that is too big, too retro, and produced in everyway contrary to the research and the thinking in truck manufacture, and they sell like wildfire.
Where are the Enzo Ferrari's? The Gordon Beurhigs?
Radio, too is researching itself into the background. It's being shaped by listeners who haven't been exposed to innovation. It's being shaped by people who don't care. It's becoming GM, disposeable. Count the number of car radios on the market. Count the number of car radios that have CD or Cassette players in them. Now, count the number that don't.

> who like that format in both of those towns.

Sure formula works. As I said in the original post, it makes easy for easy pickin's. But where is the innovation? How do you know that people like the same products nationwide, when you don't expose them?

In Wichita, Kansas McDonalds couldn't get a foothold on the marketplace. That's a formula that works. Kroc took the McDonald Brothers concept and made it a national standard. It works, works, works. And has for decades. And yet in Wichita, Spangles kicked McDonald's ass. Because they exposed the market to something better than formula. And they were local, local, local. There's a lesson there.

20,000 radio stations and hundreds of thousands of people behind microphones, you're telling me that a station in Duluth will sound like a station in Spokane? How is that? Why would that even be permitted? Duluth isn't Spokane. Values, tastes and ethics are different. Economics are different. Why would the radio stations, quintessential mirrors of the marketplace that they are, be the same? Unless they are crafted to be so. And whether or not the listeners in the other market hear is not the issue. There is a motherlode of individual thinking out there that is not only not being heard, it's not even getting a fair airing, because formula works. Because it's easy. Because growing an audience based on performance, involvement, substance and innovation is hard.

Enzo Ferrari would not even be heard today. Gordon Beurhig's folio would never be opened.

Now, I understand the need for research. I really do. What I question is the need to accept the 'targeted list of songs' as a standard. Music research and targeting makes decisions for the audience before the audience ever gets exposure. Decisions made by research, or consultancy, or corporate board policy, indeed protect the numbers, but they do not serve the individual. And it is the individual that is the foundation for the numbers. Serve the numbers you certainly do get sales, and protect the stock price. But ignore the individual...well, no loyalty, no commitment. And the point is, that you don't even try. Massage the formula. It works.

Zane Barnes, when he was president of SW Bell, said after a particularly bitter rate case in the 70s, "They don't want to pay our rates, we don't need them as customers." Listen carefully, you'll hear that echoing through the halls at corporate radio offices throughout the industry. Radio simply doesn't need the individual anymore. They don't need the listeners. They simply need the numbers. And having the radio on, even when it cannot be heard, is enough to qualify numbers.

Population is at an all time high. And yet looking at the big picture, radio use, when you compare listenership to the population, is a very sad picture. Because whole blocks of individuals are not being served. Listeners are not being courted. Only numbers.

Only numbers.

If radio were doing it's job,--REALLY doing the job, WORKING for it's audience--the numbers of CD and cassette players in cars wouldn't be so staggering. And it's not just a matter of commercials.

Hi. Just a quick thought for the person writing in, dying for info on LPFM--Do suggest checking out the radio/TV trade magazines and web sites.

All the trade publications are going crazy covering it, Radio WOrld, R&R Bdcstg & Cable, M Street Daily, etc. etc.
It's true that the "general" public isn't all that involved in this, (reading about BOSNIA anyone?) but if you care about the business, it's up to you to seek out the plethora of sources where the info. is available.
best,

I think it's whats in the file that's illegal not the file format or
compression itself.. Prophet uses a form of MPEG Compession... That's not
against the law.. and BSI Wavestation can use mpeg-1 layer 3 files
too!! (mp3s) and that's not illegal... It's all about copyright and having
the proper approvable to use what you have in the format.

kThers a sign on 270 going north right before the broad st exit (on the west side of town near westland mall) saying turn to 1200 AM for traffic info when this light is flashing... I turned in (no light flashing) and received NoAA Weather radio being retransmitted. Im assuming this is some TS Station (Those travel info deals) but I carried the signal all the way up to Tuttle/Dubin before I got bored and changed channels.

When you purchase Prophet or BSI, or any hard-drive-based automation system for that matter, the necessary software licenses are included in the system price. That makes it legal.

>If this anti-LPFM legislation should indeed become the law of the land, I predict we will see a substantial increase in unlicensed microbroadcasting stations as a result.<

We're going to see it whether HR 3439 becomes law or not. None of the LPFM proposals, including the one that passed FCC muster, would have stopped the pirates in any case. Between LPFM and Class A TV, there will just be more work for the Enforcement Bureau, which is already unable to keep up with what's out there now.

The National Aircheck is looking for one new taper in San Francisco who we will pay to tape radio and tv stations for us sporadically throughout the year. No, you won't get rich off of this..maybe an extra few hundred dollars a year. But it's very simple work.

If you are interested call us at 888-206-9662 and ask for either Robb or Linda. Or, you may email us directly at aircheck@national-aircheck.com.

Thank you.

> population that has access to radio, it's down.

Try this: my point of reference is the single human radio listener. Whether
the population oges up or down or migrates to Alaska, this is a stable point
of reference. In the late 40's, the average listener spent somewhere around
21 hours a week listening. In 1999, the average, single, two-legged listener
spent 21 hours a week listening. (Easy scholarly reference to the early
studies: Ronald Gray's amply annotated and footnoted biography, "Gordon
McLendon," available form Amazon.) Present day figures are available for
www. arbitron.com.

Persons using radio is a direct projection of the average time each individual listens. Multiply 21 hours by the number of 12+ persons in the USA in 1949 or multiply them by the number in 1999 and then do the rest of the math and you will have the PUR rating. If the average was 21 hours of individual listening in 1949 and 21 hours in 1999, the PUR rating will be the same, as "rating"is a share of the total universe. The only variable then in the whole equation is the nubmer of persons in the country and that is irrelevant to an indexed statistic.

Again: the average listener listens as mouch today as they did 50 years ago.

Quite amazing, considering that in 1949 TV was an infant, there was no internet, no gaming devices, no multiplex theatres, no VHS and DVD, no cellular phones, no nickle minute long distance, nearly no fitness centers... or, more simply, very little competion to radio. Yet people STILL listen the same number of hours. Must be pretty good for an "old" medium to keep its share of available time against so much competiton.

"Raw numbers certainly are up...but in proportion to the population that has access to radio, it's down."

Now this statement is simply faulty. More people have access to radio now than in the late 40's. There are more radios per person in the USA today than then, mostly because of the invention of the semiconductor and the availability of cheap portables and car radios. Access to radio is enormously greater today because the cost of a radio indexed against personal income is about 10% of what it was in 50 years ago.

I cited two of my sources already. I have not seen any of the books you purport exist and contain figures that contradict mine. Since I am a voracious reader, I kinda'thik I would have discovered at least one of the "many" boks that have statistical evidence (not some personal opinion) that vast segments of America find radio boring & etc.

How about nameing, lets say, three sources out of the many? Otherwise, I'll understand clearly that you are just making this part up to support your unsuportable point.

> Creativity.

You are mistaking a totally different competitive environment for different attitudes. When a radio cost as much as several week's pay for many working class Americans, there were not multiple radios in a home. Everyone shared the single radio. Same with early TV. And when there was a common national musical taste and far fewer radio stations, individual stations seemed to be more important.

Oh, the kid had his hand on the dial because in most of the USA, that kid had to tune into a station far away from town to get thier favorite music... kids in Duluth listened to WLS, those in Sheridan, WY, listened to KOMA, etc. There were fewer stations and far less specialization in formats.

You perhaps don't have kids. I do. My 19-year-old goes crazy when a favorite song comes on the raido, and she talks incessantly about the guys on her favorite station's morning show. She changes my presets constantly to be able to hear the stations she likes... . 50 years ago, there were often more pushbuttons on the radio than local stations available for listeneing. Example: Traverse City, MI. In 1960, there was one listenable local station. Now there are over 20. In fact, there were huge "grey areas" around the US where no daytime signal was available.

As to the rock wars, and having been part of several, I'll say that generally these wars were won on who spent the most, not on pure raw creativity. Ans, since these were mostly AM affairs, the one with the better signal generally won in the end: CFL vs. WLS, WABC vs. WMGM, WINS, WMCA et. al., KHJ vs. KRLA & KFWB, WSAI vs. WCPO, WMAK vs. the 1240 station, WNOX vs. WKGN, 13-Q vs. KQV, WFIL vs. WIBG, etc.

> It's not happening today. Radio doesn't have to.
> >
> > > Listener loyalty is at an all time low.

When McDonalds was the only hamburger purveyor, there was extreme loyalty. With the plethora of providers in the market now, as well as alternatives in the same fast food arena, Mc Donalds does not have the same loaylty. But as

a business, you may have noticed they are doing just fine.

Usaga and loyalty are different. People still use radio just as much as 50 years ago. There is less staition loyalty because there are more stations and a crowded competitive field does not create loyalty, it creates cutthroat competiton.

> >
> > Statistics. I can come back with indications that loyalty to specific

> The protests. The letter writing campaigns. Public acceptance of
> the instant and radical changes has pushed radio out of their lives
> at the level of personal involvement. You don't invest in a
> relationship that you accept will not last from the outset.

Please indicate some substantive source or documentation. Generally, in my experience, format changes have been protested to the extent tht the format was viable and exclusive at the same time. I went through a huge protest in Richmond in 1970 when a low, low rated classical station... the only one, commercial or not... went "Beautiful." 9 years later, I made a high rated beautiful music station go away with nary a protest... because there were by then alternatives and the market had many, many signals.

Also, people have complicated enough lives today. They just don't have time to worry about radio stations, zoning regulations or whatever. For example, about 20 years ago a town meeting about extended use of an equestrian park for non equestrian uses brought out over a thousand people. They were worried about late night crime, outsiders, litter, etc. Last week, the exclusions of two decades having run out, there was another hearing... with property values much higher, crime much worse, and environmental concerns at a national peak, only 25 people showed up. We don't have time for our jobs and families (stats show the avarage American working nearly 10 hours more a week than 25 years ago).

Don't confuse the huge competiton for peoples finite available time to be a lessining in the enjoyment of radio. If you look at any medium or large market, there are far more entertaining morning shows, far better focused music and many formats not available even 20 years ago. The choices are more, the talent is better.

> lifegroup.

Forget the lifegroup. Remember that the main reason that ther has been a
defection form the country format is that country music is on the decline,
and has been since around '93 or '94. If you look at major country markets
like Houston, Dallas, San Antonio and Phoenix, you will see that the
listenership to country declined overall irrespective of the number of
stations and it indexes to the popularity of the music, not the stations
themselves. Using country alone to make this type of "radio sucks"arguments
is very risky as, at the moment, for many country paritisans, "country
sucks."

> of choice.

I truly don't follwo you on this. What it indicates is that listening rises and falls due to a set of varieables, not all controlled by radio. One is the quality of programming and the number of choices. ANother, in some markets, is the quality of signals. And, finally, the quality, popularity and avialibility of the music (for music stations, of course) can radically change the total format shares. And, finally, the talent on the stations can make a difference. The example cited was purposely only partially revealing. The new station in that format in LA also put on a very good morning talent... who is now # 1 overall in the market with around a 10 share! The entertainment value was enhanced, and the pie grew. Example of good radio, 1997 style.

> too long to be that naive.

I agree in to a good extent. Not that much has changed except that there are far, far more stations. And most of the new ones in the last 20 years ahve been in smaller markets, where subsistence was a problem even before adding spots on the dial came about. That in itself is the reason for the satellite formats and cloned stations based on something some new PD heard far away while on a vacation.
>
> Now, in the era of consolidation, we have one program director

Interestingly, some of the best talk and Top 40 I have heard ever comes out
of Randy Michaels and Jacor, now CCU. It is not all bad, not all good.

> free and they have no commitment.

Generally, this type of complaint came during the AM era when stations in
the northeast were blanketed at sunset by auroral Norht-South paths and
Venezuelans would cover WKYC in Cleveland Heights and Colombians could be
heard through WLS in Gary. In these cases, listeners could not find any
station and called the first one to come to mind to bitch about reception,
something they generally knew nothing about.
>

> was just too much trouble.
> No Loyalty. No commitment.

No more loaylty than to departed cast members of Laugh In or Saturday Night
Live. Or to Ed Byrnes of 77 Sunset Strip. Talent and programming gets stale
after a while. Listeners have a hard time deciding between new and familiar
and that is the basis for lack of loyalty.

>

> handful. The rest aren't trying. And don't believe they should.

Agree on Rush. He is simply entertaining.

Disagree on Disney. It is stale, contrived, irrelevant to the lifestyle
group (to use your term) and is simply an enormous paen to the egos at

Disney. They take their brand too seriously. And there is no loaylty. The TSL is dismal, even in the custom surveys they do... because they have reated a product for a market that does not exist.

>
> Interesting thing about research. It does indeed find what
> listeners want to hear. Or so the researchers are told. But if you
> look closely, the questions and the results are all based on what a
> station is already doing.

Depends on who is doing the research. In many cases, perceptual studies, the complement to call out and AMT's, show opportunities or defects that need attention. Here, the idea is to probe and find out what a listener is moved by, positive or negative. The ability to implement depends on having a good PD, though.

>Find out what's being done and give them
> more of that. Ask general questions and breakdown current policies
> based on language that is often vague and indistinct. Define
> language based on a focus group of 8 people, out of a market of 8
> million.

Focus groups, while often used to find out broad issues prior to a perceptual, are not particularly useful. The group dynamic at a focus session does not parallel the solitary mode of most radio listening. Perceptuals generally deal with long interviews of hundreds of persons and have, when there is a budget, plenty of open ended questions.

>What research doesn't do, is create new life. New spark. It

> His message was clear. Expose them to something above the common
> standard, they will respond. That you can't improve the customer
> base by lowering the bar.

Requirement: talent. The reason there is only one Rush is not that the others don't have a chance. It is that there are no others. Look at the attrition rate for TV talk hosts... there are just not that many engaging folks. And the ones that are good get snapped up.

Part of this is not knowing how to use research. I work with a morning show with a huge share... however, in the core demo, there are about 60% of the people who never listen. rather than saying, "oh, the show sucks because most people don't listen" we look at the fact that the show does cume 1 out of every 3 adults in the market." The person who reads the negative diary

comments about that show would want to cancel it womorrow, because the non-users hate it... but we have enough users to say that we don't care about those remarks.

> never been exposed to an above average product, to reject it out of
> hand. New thinking requires exposure and time for acceptance.
> Research many times doesn't permit that.

Depends on hwo well the research was done. P&G, the naitons leading marketer, has a failure rate of over half on new products and brand extensions. They know how to make products and how to research, but predicting consumer behaviour is difficult. But they keep trying as there is no better way. Going blind, the alterntive, is not viable.
>

> fields a truck that is too big, too retro, and produced in everyway
> contrary to the research and the thinking in truck manufacture, and
> they sell like wildfire.
> Where are the Enzo Ferrari's? The Gordon Beurhigs?

My most recent cars have run better than anything I ever owned in the past. I think that that is the key issue. Styling runs in trends form fins to chrome to sharp lines to soft ones. You obviously don't liek the current crop; I find them fairly appealing as a group. Quesiton of taste. And I can't afford a Ferrari and don't want one anyway.

> Radio, too is researching itself into the background. It's being
> shaped by listeners who haven't been exposed to innovation. It's
> being shaped by people who don't care. It's becoming GM,
> disposeable. Count the number of car radios on the market. Count the
> number of car radios that have CD or Cassette players in them.
> Now, count the number that don't.

You confuse dealers required options (try to get a radio without a CD at the high end... you can't) with customer preferences. I had to take my last car's $900 Bose radio out and put in one that let me listen to cassettes instead of the stupid CD changer in the cargo area... Yet I wanted the car, but not the radio. I had no options. Same for most cases. It comes with what it comes with. And accessories are the hot profit point for dealers.

> them?

When I travel, I generally look for predictable, reliable airlines and accomodations and even restaurants. That is human nature. No surprises. Turn the radio on and get what you expect, not the radio equivalent of a joke store hand buzzer.

I hear hundreds of internet radio stations. None of these sounds at all inovative. Same old same old. Maybe because that is what most folks want and like.

> In Wichita, Kansas McDonalds couldn't get a foothold on the
> marketplace. That's a formula that works. Kroc took the McDonald
> Brothers concept and made it a national standard. It works, works,
> works. And has for decades. And yet in Wichita, Spangles kicked
> McDonald's ass. Because they exposed the market to something better
> than formula. And they were local, local, local. There's a lesson
> there.

Yeah. And Pepsi, for a while, outsold Coke in Venezuela. The local bottler was better than the Coke franchisee. After all, who in international wanted to go to Venezuela? Well, they incentivized the position, sent the right crew in, and now Coke outsells Pepsi there. Proving what another 200 countrys have shown, which is that Coke is a better product to meore people than Pepsi. It is product plus marketing. The Wichita folks obviously knew about marketing, as I have eaten there and the differences are miinimal.

>
> 20,000 radio stations and hundreds of thousands of people behind

> quintessential mirrors of the marketplace that they are, be the
> same?

Why would Red and Blue net fare do as well in Philly as in Austin? Becuase, aside from a few regional differences in accent and preferences for oatmeall over grits, Americans are pretty predictable in entertainment choices. TV networks and cable channels prove this, too. How much local TV is there that is truly different form one region to another? None.

In radio, TV, magazines and such, there are no extreme differences. The Spice girls sold about as many tunes per capita in Ohio as in Nebraska.

M.A.S.H. and Cosby and All In The Family and Dragnet and Seinfeld all did about the same numbers regionally as nationally.

And an A/C in Duluth will have the same tunes, give or take a few, as the one in Spokan because the tastes for such music are pretty national.

>Unless they are crafted to be so. And whether or not the
> listeners in the other market hear is not the issue. There is a

> performance, involvement, substance and innovation is hard.

Innovation introduces an element of unfamiliaraty to programming. This makes the risk taking hard to justify.

Also remember that successful innovation is emulated so quickly today that within a few months it does not seem innovative any more.

> Now, I understand the need for research. I really do. What I
> question is the need to accept the 'targeted list of songs' as a
> standard. Music research and targeting makes decisions for the
> audience before the audience ever gets exposure.

I think you misunderstand research. Unfamiliar, new songs are not researched. Only songs that have high familiarity are researched, whether by call out or AMT. New songs go on the air everywhere wtih no pedigree, no guarantee. Once they have been on the air a whele (a couple of weks at CHR, a month or so in A/C) they get put on cll out and are traced. If they trend the right way, they stay. If they don't, they are classified with all the other stiffs and go away.
]
>Decisions made by
> research, or consultancy, or corporate board policy, indeed protect
> the numbers, but they do not serve the individual. And it is the
> individual that is the foundation for the numbers.

Right. But, if more individuals would tune out over a given song or style than woud stay with the station, then the song or songs are bad for you. Like too much bacon at breakfast... an occasional slice may not bop up the cholesterol levels, but a half-dozen slices a day will. Keep the negatives under control is what it is about.

>Serve the numbers
> you certainly do get sales, and protect the stock price. But ignore
> the individual...well, no loyalty, no commitment. And the point is,
> that you don't even try. Massage the formula. It works.

It works only when you find there is a substantial unserved group in a market. However, today, there is generally not a lot of this to be found as everybody with a low rated statin is looking and spending losts of money to do so.

I just found a new format in LA, through research. The implementation was done by finding someone who loved the music, understood the demo and who could make an airstaff team of like personalities. First month, with only 19 days on air in the month, doubled previous format share. It took multiple research projects, tons of money and people who knew the target audiences being researchd to interpret. This happens seldom in a career... but when you find one, it is fun. But they are few and far between even if you are will ing to look and to take the risk.
>
> Population is at an all time high. And yet looking at the big
> picture, radio use, when you compare listenership to the population,
> is a very sad picture. Because whole blocks of individuals are not

21 hors a week per person 51 years ago. 21 hours a week today. The more I think, the more proud I am to be in radio as the medium holds up to all the computer, net, video and technology alternatives to spend time on. People still use radio as much as 50 years ago. Pretty amazing.
>
> Only numbers.
>
> If radio were doing it's job,--REALLY doing the job, WORKING for
> it's audience--the numbers of CD and cassette players in cars
> wouldn't be so staggering. And it's not just a matter of
> commercials.

Pardon the analogy, but it is too appropriate: Why does a dog lick its butt? Because it can.

We have VHS machines because we can, and because they are so cheap. How many videos does an average family rent and view a week? We have the machine because we can afford it, we will occasionally use it and, well, because we can.

Same with cassette and CD players... but added to the issue is the one I mentioned before. try getting a car with a plain radio. No CD, no Cassette. It is, if available, a special order. So, most people accept the default and move on and pay the $200 difference at $4 a month over 5 years. This is not a good example, and does not in any form change the fact that PUR, while peaking around 1987, is abut the same as it has always been.

Larry,

Does Jim have a website? Would love to see it if he does. I actually met him years and years ago when he did a remote from McDonald's on Town East Blvd. in Mesquite, TX for KISS-FM (I believe it was in June of 1986).

I srill have air checks from that remote and was listening to them about 3 weeks ago. Man I really miss listening to him, he was my role model back in those days. <g>

I think anyone who listens up and down the dial and is honest with
him/herself would have to agree with this--I certainly do. Of course,
my contention would be that the larger number of stations is what led
to it, by fragmenting audiences and spreading the talent pool thinly.

> And despite a greater pool of programming talent and
>ideas.

I'll have to disagree here. My very recent experience in recruiting
staff indicates to me that the pool of available talent is
considerably smaller than it once was.

> Yes there are some great
>stations out there. But they are fewer in proportion to the total
>number of stations.

That's because there are a hell of a lot more stations. And there is
not a commensurate increase in the available talent to operate them.
(and in that I include management talent). BTW you could make the
same criticism of TV shows, movies, or music.

Rob Andrews wonderred...
>... how the technology was developed, and who came up with the idea in the first place.<

See http://www.rci.rutgers.edu/~dmorton/8track.html
and www.8trackheaven.com/faq.html

The 8-track FAQ explains film loops dated back to the 1920's and that looping wire recorders date back to Western Electric (Bell Labs) in 1933. In his article "A History of Endless Loop Magnetic Recording Technology in the United States," David Morton attributes the development of broadcast cartridges to two men from Toledo, Ohio.

Bernard Cousino, looking for a continuous loop player, substituted 1/4 inch audio tape for 8mm film in a film loop cart, and solved the problem of tape binding in 1952 by inventing "double coated" tape, treated on the back side with colloidal graphite, which served to lubricate and dissipate static.

George Eash is the creator of the "Fidelepac" brand name broadcast cart. Using an external pinch roller, cue track and tape braking mechanism, Eash's design was well suited for radio's instant start requirements, and in the early 60's made inroads in replacing transcription turntables, banks of Magnecorders and studio engineers as a means of playing spots, jingles and IDs.

I worked in a station in the late '70s that still had not installed cart machines in the studio. Since the jocks were also board ops, we had to play the music (from 45 RPM records, no less), and quickly cue up agency spots from 5" reels, on one of those Magnecorders that you needed a road map to thread properly (I can't remember the model number of those, but the threading path was something like down, around, up, under, across the head, down, grab the motor engage lever, around, then to the take up). It's amazing we ever had any spots on the air at all. Then is when I REALLY missed cart machines.

Listened tonight to WMEE. A very "safe" list of rithymic tunes has been added such as Blaque, Christina Aguleria, and TLC. There is nothing like the "Thong Song" or "Forgot About Dre" I would still classify the station very much a Hot AC, not Top 40 mainstream. As a matter of fact, Clear Channel's Mix 98.1 seems to be have an even "hotter" (more R&B) mix at night.

From Alfredo Torrejon...

-->...they mentioned that at one time there was an LPFM service, but it was killed off after heavy petitioning by NPR. Among other reasons, NPR was concerned about the public image of non-commercial FM broadcasters.<--

I think you're referring to the old class D FM service which was a little bit different than the currently proposed LPFM service. The old class Ds were limited to 10 watts, had to be non-commercial and were only licensed in the non-commercial end of the spectrum (88.1 mhz-91.9 mhz). Almost all class D stations were owned and operated by schools and universities, and the interference factor was terrible. FM radios don't receive several signals on the same frequency the way AM radios do. FM radios tend to "capture" the signal that is the tiniest bit stronger but, because signal strength undergoes miniscule changes constantly, listening to a frequency with several class Ds competing for your reception was like listening to someone throwing a switch at random which would automatically pipe in a different station. Coupled with the drift inherent in most FM radios of the era (unless they had AFT circuitry), one could very easily be driven to tuning out completely.

On top of all the class Ds, there were some high power FMs on that end of the dial, too.

1702. Re: MP3 licensing for broadcast

Newsgroup: rec.radio.broadcasting
Date: 2000-04-16 00:00:00 UTC
From: Ed Ellers <ed_ellers@msn.com>
Message-ID: <009901bfa74b$20f24f80$4ad0193f@edellers>
Source record: 19858

Michael Black <BLACK@HWS.EDU> wrote:

"MP3 licensing is a whole 'nother issue. The patent owner, licenses the MP3 coding scheme and charges a royalty on manufacturers and users of hardware that includes the decoding, and software that includes the decoding, and distribution mechanisms. So, Telos pays a royalty for using MP3 in their codecs, which is included in the price you pay for a Zephyr."

Fine so far.

"The MP3 software, which is "freeware" is licensed (if you bother reading it) for personal use ONLY. You can not use it in the manner for broadcast or webstreaming without the proper license. So, if you are decoding MP3's and airing them, you are not legal."

Nullsoft's license for Winamp says in part: " Nullsoft, Inc....grants Licensee a non-exclusive and non-transferable license to reproduce and use for personal *or internal business purposes* the executable code version of the Product..." (emphasis mine). I don't see anything in the agreement that precludes business use.

"Through the year 2000, the owner will not charge any station, but is persuing and setting up a fee for radio stations and internet streaming. More information is at http://www.mp3licensing.com."

Streaming, yes, but there is no mention at all of a license fee demand for simply decoding MP3 files (aside from the license fee that has to be paid by the decoder's authors, fifty cents per unit). Not being a lawyet myself, I'd suggest having the station's attorney(s) look at the license agreement of whatever program is being used.

FYI, I was the one who added the whole broadcast carts section to 8 track heaven......because hell, I still use them to some degree....at work in production because some contest playing elements are easier to fire on cart then the PC....and of course, our news depts still use carts for actuals......

personally, I always liked the format since I started in radio almost 15 years ago as a board op.....shove em in and play....and when I like something, after awhile, I tend to want one for my own.....so thus, as of about a month or so ago, I imported a audicord e-26 stereo record unit from florida dirt cheap.....besides, I have a shitload of music on cart I don't have on vinyl on CD....I carted them before I had a Cd burner, and i'm too lazy to move em to CD....also have 2 gates 60's vintage criterion series mono players.....OK, to me, they are all "toys" though it's nice to know i'm not the only one who likes the manual handling of carts....

BTW, if you REALLY miss the carts, buy a machine...a few have been going in the under $100 range on e-bay....vintage ITC and gates players and recorders...and people are actually bidding on them....

how about 16 inch radio transcriptions??? love the format, because it's vintage....have about 200-300 discs....and a mccurdy CH-12 with a microtrak 16 inch tonearm to play them on.....i have a few 40's vintage commericals that are canadian if anyone is curious on my web site at:

http://members.xoom.com/snarfdude/1940s.html

best regards
SD!

From Steve Ccrowley...

-->The 8-track FAQ explains film loops dated back to the 1920's and that looping wire recorders date back to Western Electric (Bell Labs) in 1933...<--

Hi, Steve! Great info! Remember some of the other systems for recording and playing program material on the air? Transcriptions that ran from the inside out? Reel-to-reel Spotter decks with transparent windows between cuts to allow a photocell to count the cuts? Carousel cart decks (my personal disfavorites) that would hold 24 carts and spin them on a drum past one playback head assembly (but would never stop on the right cart)? How about the gizmo whose name I forgot, but was basically a one foot wide spool of tape with a sliding playback head mechanism so you could have 60 or so spots at your disposal (the whole damned machine belonged in a disposal)? Your post mention Magnecorders...yes, the good old Maggies (later Telex-Magnecorder), with their tape path that required a road map to trace, and they had to be mounted two streets away and remotely controlled to keep the "clunk" of their starting mechanisms from being picked up on mic.

Ahh, the good old days. I actually miss 'em!

>them were built in a rush on a shoe-string budget and it shows.

I would agree with that.

> Beyond that
>they were not maintained because of bottom line cost cutting. We take VERY
>good care of our technical plant and pass as much bandwidth as we are allowed
>by the FCC. Don't blame Clear Channel, Infinity, Disney, etc. for the crappy
>consumer radios that are being purchased and manufactured.

The problems are many fold. First, there was a rush to put on "Daytime
Only" stations where there was no need for them. These were the darlings of
the 60's and 70's.
Next, quality radios weren't made anymore for AM. As much as I don't care
for Leonard Kahn, he did put together an audio piece that was sent down the ABC
sattelite back in the mid 80's comparing the sound of todays radios with one of
(I believe) a 1940 vintage radio. Same station, two different radios. The
audio of the 1940 vintage radio blew away the modern AM radio.
Also, those "darlings" of the '60s and '70s, the daytime ony stations, got
nighttime authority. Now to add more noise to the mix, you have these
stations, some of them with only 250 watts daytime, staying on the air with
flea power. And stations that prior to the Canada/US/Mexico treaty which used
to reduce power, could keep it on full power 24 hours. Talk about garbage at
night!
It's funny you bring up Disney. Some time ago on this newsgroup, wasn't
someone lamenting the fact that the transmitter site at WLS hasn't been kept
up? No, it's not their fault about the crappy consumer radios, but they
haven't been falling over each other in maintaining their transmitter
facilities either, and that's just as important.

>carts for actuals......

Yeah I read up on that and just FYI, the longest tape cart I have ever used is
10.5 minutes... Trust me, you NEVER want to use one of these babies... They
drag like hell

Why Audiopak ever made them that long is beyond me...

>BTW, if you REALLY miss the carts, buy a machine...a few have been
>going in the under $100 range on e-bay....vintage ITC and gates
>players and recorders...and people are actually bidding on them....

One of these days.... Heck I'd like to buy a real broadcast console and 6
playback decks just for my own amusement. I always wanted to work for a
station that used carts for everything and never had the chance. I figure next
best thing would be a net only station that's part live and part auto. Live
stuff would be all tape carts.

Well hey, I can dream, can't I? <g>

But seriously, one of these days I'll get a couple of decks...

My next question is.. which tape cart do you like the most? I always
preffered the ITC's (formerly known as Scotchcarts) because of the "no pressure
pads or moving parts" system they incorporated. The AA-4's from Audiopak...
geee I love having worn pressure pads give while playing one.

Oh, man. The longest I ever used I think was a big, honkin' 36 minute cart.
Our station was automated and used 10.5 carts all the time. Yes, many of
them dragged. We also used lots of 15 1/2 minute carts, and quite a few 30
1/2 minute carts.

From Rob Andrews...

-->and just FYI, the longest tape cart I have ever used is 10.5 minutes... Trust me, you NEVER want to use one of these babies... They drag like hell<--

Actually, the longest carts in general use were 32:00 long. They were used to cart programs, but few radio stations actually used them. In fact, later model cart machines couldn't play them. Earlier cart decks had metal guides that fit against the left side of the cart. Remove the guides and you the cart deck would play the larger carts.

There were actually three sizes of carts. The largest would run 32:00, the middle size could go for 20:00 and the smallest size is the one most people are familiar with.

BTW, if the carts you used dragged, you had some technical problem. Properly operating cart decks and carts didn't drag...not even the 32:00 carts.

FYI We used the 32 min carts constantly at Spanish language WCRW, Chicago. In fact one of those 32's was used three times weekly for 18 years (same cart) and worked very well.

Nope, the music was not "draggy" at all. In fact many PIANO tunes - particularly susceptible to drag, flutter, etc. - sounded very good. The Spotmaster machines received DAILY maintenance - alcohol and q-tip cleaning.

1714. BSI Revisited

Newsgroup: rec.radio.broadcasting
Date: 2000-04-16 00:00:00 UTC
From: Shawn Fink <finkster@en.com>
Message-ID: <38FA681E.8C911C07@en.com>
Source record: 19870

An update on the latest in my BSI troubles...

Lisa of BSI Tech-Support and I have had an ongoing E-mail relationship all week. After chastising me for using legal language (which I won't repeat here so as not to offend anyone's sensitivities) and informing me

that SOP in such cases is to hand me over to the company president, she proceeded to request files pertaining to the innermost workings of my PC, while also failing to satisfactoraly answer any of my complaints.

In fact, she informed me that, "I do not have a big red button to push that says "Fix This"." And all this time,. I thought such buttons were a part of the Microsoft Windows SDK. Well, I am crushed to find out this is not the case ;-) I didn't ask for a big red button to fix my problems, just software that does what its supposed to, or timely tech-support when it doesn't. Besides, I understand that the latest "MS

Big Button" will be purple. :-)

At any rate, I E-mailed the necessary files on 2 occasions (the first ones mysteriously never arrived),and was then given a list of memory resident programs to terminate. Apparently, using virus-checkers with BSI is a no-no: "Anti-virus
programs are WELL known to conflict with our program." Hmmmm, how well known? Where is this documented? It must be in the operating instructions, oh wait, BSI charges extra for a printed copy of said instructions, well, that's why I must not have known about this "wel known" conflict. Of course, based on someone's post last month that BSI

used to inject known viruses in WaveStation, maybe there's a sinister reson that WaveStation and anti-virus programs clash :-)

Well, I did all that I was requested to, and still WaveStation refuses to recognize my latest audio files. Only NOW, has Lisa asked questions related specificaly related to my file problems.

I have a feeling that we are far from seeing the solution...

I've had several great days in radio. Among the best was the day they
wheeled my Ampex MM-1200 8-track out, and another what boxing up thousands
of carts and ITC decks and sending them off to the local Community College!

I do not miss anything that has to do with analog tape!

Digital sounds better (to my ear), and more importantly is more consistent
rather than the variances between tapes and machines, not to mention that
every pass over an analog headstack would erase the tape slightly. I like
with most digital systems preview and recue are easy. You don't have
jocks changing the way things are rotating. Digital works.

On the negative side, digital is more expensive, there are sync issues to
deal with if you are using the digital i/o, and you can't fix the machines
with a hammer, bailing wire, and Doublemint gum.

Fair trade-off I'd say ...

Oh geez, I forgot about that! We used to clean all the heads in the entire station twice a day ... 8am and 8pm! Another reason to like digital.

Remember the smell of that Ampex headcleaner in the can? With the blue label? Found out years later that it was a highly dangerous chemical cleaner, that would be considered hazardous material in most areas. Really cleaned the crud off the head better than the alchol we used - and still use, weekly (when I remember) now.

I can't argue that digital does have advantages, BUT if you are using hard drive based systems, to me the tradeoff of a drive crashing with all the backup material stored only on tape, it's a pain.

Also having to take the hard drive system down to defrag the drive is even more of a pain.

If it were up to me, I'd like to have both carts and hard drives. You at least have fail-safe systems in place for either format.

Now for stations who dub everything to CD's and use CD players, that's another ballgame but undeed less frustrating.

I have no experience with Minidiscs as cart replacements, so I can't speak for those.

Not bad, David.

A Hammarlund BC779 Super Pro, modified and upgraded R-71a, and W-J
8711.

Working A-D Dx Ultra, assorted random wires and a rhombic.

That sounds like a draw. Unless you can produce a RX-340.
Although I may concede to an NRD 301A.

Nice to finally meet someone with the good sense to play in the
big leagues.

I don't miss carts at all! There were many times that the heads on the cart machines were dirty and it didn't sense the seg tone or even worse, the cue tones, thus the cart cycled in the machine and started playing again. Then there was the busy-jock who hit the stop button and removed a caryt before it re-cued, then along comes Jim to play it and it isn't cued up. I have a classic aircheck or Bob Jaye at WMYQ Miami...he starts a cart of Lover Her Madly by the Doors, only to find it is on the very end of the tape.
I'll take music and spots on hard drive any day.

Ah, wasn't that fun? I did some fill-in work at KJOI/Fresno, and they had all the spots in an old automation thing that used large "banks" of carts, and quite often one of the heads would get dirty and whenever the automation went to that bank, you'd hear the spot in the dirty machine playing in the background.

Mark, I worked at WERK in Muncie from 1965 into 1967 and remember that
weird setup at WLBC. They never had any competition until WERK came

along.

As I remember, the station had constant reverb turned up full blast. Arthur Godfrey really sounded strange through the reverb. We used to laugh when that setup got out of sync and jock would be announcing the songs out of order and the engineer didn't know the difference.

This isn't nice, but we dubbed them World's Lousiest Broad Casters for WLBC.

HAH WTAM, their prophet'ed that would explain it... Prophet has it's
quarks, expecally if you run it automated sometimes it just has a habit of
screwing up.. Not as bad as BSI though.. I hear horor stories about their
system and a local station here where I live uses it for live assist and
songs are always firing at random.

Yes, that would happen once in a while. The better board ops would
pay attention and fix it. I also remember the reverb.

Well, those of us who worked there called it either the World's
Lousiest Broadcasting Company, or Wee Little Broadcasting Company,
depending on our mood.

I can't say that I've enjoyed radio programming since I was sixteen. And that was well before 'broadcast holding companies' ever existed. Do you really believe that the quality of radio programming changed drastically on Jan. 1, 1996? Or have you selectively forgotten that radio sucked before that, too?

Maybe if the population of this country woke up one day and decided to become individual 'citizens' rather than just 'consumers' our media programming might change accordingly. What am I saying, I shouldn't expect that from a country where 'TV Guide' is the top selling periodical. Even when people have a very wide choice in media they pick crap. I think you have an incredible amount of faith in the American public. I no longer do.

>

You're right. It is inexcusable. I haven't ever heard an automation system set up as poorly as you claim the one at WMVX is. You should call the program director, or flood his email. Considering how many Hot ACs there are in that market, they do surprisingly well for such sloppy technical work. Maybe the last four Aribitrons are just a fluke.

>
>

>>> It's funny you bring up Disney. Some time ago on this newsgroup, wasn't someone lamenting the fact that the transmitter site at WLS hasn't been kept up? No, it's not their fault about the crappy consumer radios, but they haven't been falling over each other in maintaining their transmitter facilities either, and that's just as important.

>Maintaining in what respect? I know I've neglected my duties in getting out to the AMs to mop the floors and prune the rose bushes lately, too. Could this be because the equipment is much more stable than it used to be and we don't need someone to take readings on site and make adjustments every hour anymore? What else do you think they did with the rest of their time on the clock? Surfed the internet?

They had the strangest selection of music. There was some kind of old 1940's song called "Three Little Fishes" that used to come up a lot. I can remember one of our listeners coming up to me at a remote one time, and I can't remember how WLBC came up, but he said "Do you mean Three Little Fishes?" and laughed out loud.

Of course, previous to WERK going on the air in 1965, had no competition for 40 years in a market of about 100,000 people. What a deal.

We went on the air with that little 250 watt peanut whistle with the outrages directional pattern and daytime only hours (with no pre-sunrise authority), doing a top-40 format and we wupped em. I was in morning drive and it was really weird to sign on at 8:00am in December. I understand that 990 went dark and they tore the array down about a year ago, but someone has a construction permit to rebuild. This time with 3 towers instead of 6.

>1996? Or have you selectively forgotten that radio sucked before that, too?

Ah, but I wasn't trying to imply that radio *didn't* suck before that!

I used to love listening to 97X out of Cincinnati, when I was at school down in Dayton in the 1989-1990. Besides the fact that I enjoy modern-rock/ alt-rock/underground (and this was when "alternative" still was a relatively close approximation of music you wouldn't normally hear on the radio), 97X simply played stuff that was *different*. So did CD-101 in Columbus (think you can to find another commercial radio station around here that plays the Waterboys? Ha!)

I might not have liked each and every song, but hey, it was still nice to have the choice, to be exposed to something very different without having to go down to the local record store and search for stuff. :)

I haven't had the chance to listen to 97X since 1990. I have had the chance to listen to CD-101 since then, and I think they've gone rather mainstream compared to what they used to play (it seems that somewhere along the line they decided that they were modern-rock). But even these days, I think they still take chances that most other stations simply won't take.

Everyone is afraid of taking chances. No one wants to experiment, as it might mean losing money. Sometimes you can come up with a good idea without taking huge risks -- I like both CCC's Mix format, and AMFM's Jammin Oldies, again because they offer me playlists that I won't find on other stations. But both are variations on time-worn existing formats.

I know the economic reality. I just wish we could go back to the days when WMMS, a pioneer of AOR in the 70's, wasn't the parody of itself that it is now, when people were a little more willing to break out of the mold.

>Maybe if the population of this country woke up one day and decided to become

I think the incredible success of WMVX in this market belies your lack of faith. I believe that the public is *looking* for something different. The Mix format gives them something different.

In the six months between the stations flip from its former format and the, um.... winter books? (yeah, that sounds about right) the station shot from down near the bottom to, if I remember correctly, fourth or fifth.

Half may be an overestimate, too. They certainly seem to have gotten a lot better. When they started, it seemed like they DID cut off about half, but even though there seems to have been a vast improvement, there are still a number of songs they cut off consistently...

I e-mailed the station already...

The best of the lot is the R390, which I purchased new when Collins had a
number left over after fulfilling a contract in 1970. It has since been
modified and lives in Puerto Rico, where I have room at a friend's farm for
a number of beverage antennas aimed at Latin America and subequatorial
Africa. The JRC rigs live in California.

Interestingly, I owned, and subsequently surrendered, a short-wave license
(4980 kHz). I almost built it in 1967, but could not afford to do that and
launch two new FMs at the same time.

LOL you're right about that. I've had plenty of cases when that happened. I have some air-check of Sonny Foxx & The Breakfast Club from KHYI-FM which used to be a Top 40 station back in the late 80's to early 90's in Dallas.

On the tape you hear someone telling a joke and then Sonny plays a "rimshot" sound effect. They then start the traffic music bed and about 5 seconds later you hear the rimshot again.

After that you hear laughter followed by one of the jocks stating "It's possessed!"

Sounded like the cart missed the cue tone and replayed :)

I also heard on at least two occasions carts literally slow down mid song with mega wow kicking in. One of those times it played like that for almost a full minute before the jock finally caught it (or someone in the office buzzed him"

Afterwards the jock came on and said something like "woah! something's wrong with that record!"

Record? ;-) Guess he figured the listeners had no idea he was using tape. <g>

Hard drive systems aren't trouble free either. As I pointed out in a previous post, sometimes the drives crash. Sometimes they have to be defragged which requires taking the system down.

I work for a station using such a system and last week we had a major problem. Actually, we had two major problems!

The main production studio's hard drive just up and crashed. We lost numerous audio files, many of them had still not yet been archived. We have no idea why it happend.

The other problem was in the on-air studio; The host computer just crammed and crunched several audio files together. We basically had two audio files playing simultainiously when that happened.

The cause of the problem was ruled as a damaged network connection on a node computer on the network, which had been damaged when new office furniture was installed.

Still we've had other problems. We had a UPS power supply fail one night when I was on duty. It just happened to be the UPS which powered the very same host computer. When these UPS's fail, they crash, come back up, crash again, come back up repeatedly until you get in there and turn it off.

To make it worse, a severe thunderstorm was passing through the area when this happend. So there I am, unable to braodcast anything because of the failing UPS. EAS alerts were never heard because our Optimod was also on that UPS.

I'm on the phone trying to call a tech. He calls me back 5 minutes later and tells me he can't get out and tells me to go ahead and pull the UPS.

To get to it, I have to of course remove the back of the studio furniture. I race down the hall to get a screwdriver. I race back to the studio and pull off the panel. I disconnect the UPS, unplug everything from it, put a 6 way power strip in to return power, and finally get us back on the air.

All the music sounded fine because that was on CD's. But when it was time to play spots from the hard drive, the damage had been done. The repeated rebooting and crashing of the computer due to the failing UPS, damaged something, and all you could hear when the spots were supposed to play, was garbled static.

Prior to that episode, we had a case where a similar situation occured, but not caused by a failing UPS. One night I was in a stop set. I had a spot running. About halfway through, the audio in the right channel dipped and the audio in the left channel increased. At the same time, the spot became garbled and staticy.

Thinking the computer was having problems, I put in another spot. It played fine, so i figured there must have been a problem with the audio file that had gone bad.

Later that night (about midnight) I was at home. I had the radio on in the background. I noticed when we hit the 12:15 AM stop set, something didn't sound right. Of course at this point we're automated, so no one is there.

What I heard, was basically that same garbled, static noise. It got worse as the spot played. By the end of that spot, all I could hear was this spine chilling, schreeching gunk. Scared the hell out of me.

There was a weather spot that was supposed to follow. It too malfunctioned. It played about 5 seconds of the first half of the spot, then skipped to the end, and repeated the end over and over and over, much like a needle stuck in a groove.

OK so I'm sitting there with my jaw dropped to the floor and wondering what the hell was going to happen at the next spot break.

Next break finally starts... It too was horrid, but in a totally different way. In addition to repeating a section of the spot over and over like the

weather cart did, the file was playing in high speed!

OK this isn't going to work. I listened at the top of the hour to make sure that even the legal ID wasn't going to air properly. When my suspicion was confirmed, I called the transmitter and shut it down. There was no way that was going to work.

We were moved to Production A while techs worked on the problem. Some of the spots we needed that morning were unavailable because they had been recorded to the host drive on a node. The Main production studio works differently, because it's the DAW system. What you have to do in there is record the spot then send it. We have no access to playback spots from the host computer directly from Production A.

Cause of problem? I'm told it was a bad IC on the sound card output, but that makes no sense. There's no way that would cause an audio file to skip around and / or play in high speed like that (or is there?) That had to be a problem with the hard drive...

What do you think?

All in all, I think every system both analog and digital, has flaws. You should be prepared for anything!

Isn't that part of the "romance "of radio? Miscued or looping carts...tone arms with nickels taped to the top side...cue burn on every record from the 10 gram 16" Gray viscous damped tone arms on turntables that take 5 revolutions to get up to speed...all in a studio where every surface is caked with 20 years worth of tar from cigarette smoke. Ahhhh radio. 'Cept nobody gets to slip cue records any more on a hard disk.

This reminds me of a prank we pulled when I was working at an East Coast small market station in the late 60's. The morning many was known to have quite a temper. The station always played the National Anthem while signing on just before the 6:00AM news, which meant starting the signout at a certain time so it would time out. I was in the Air Force and working the night shift part-time and the night before pre-cued the sign-on cart so it just played the last three notes of the National Anthem and then into the sign-on message. This left the announcer with about 2 unexpected minutes to kill. I understand he went through the roof!

>

I seem to recall much longer carts - with bigger bodies than the
"standard" size that spots/songs were put on. Seems to me they could be
up to 30 minutes in length.
Our Automation system (WMRN-FM Marion Ohio) required 2 of these
monsters to play back the time of day. One cart had "odd" minutes (It's
25 past 3 on Stereo Marion) the other had even minutes (The Stereo
Marion Time 24 minutes before 12).
A timer would fire each cart every 2 minutes -- this way when the
automation program called for a time check the proper time would play
(most of the time). When they got out of sync, we'd have a
button-pushing marathon to sync them back up. We even had a spare set
in case the carts jammed (they did).
The am station would use the mega-carts to record weekend programs.
Much easier to use than R-R tape, but if you messed up while taping you
were screwed - no going back and redoing a segment!

I'm curious which "recent studies" you're talking about. Radio has
always been all of those things. In "day gone by" they had many fewer
options. There were no portable CD players (there were no CDs). There
were no cassettes or computers or computer games or cable TV or MTV
... the list goes on.

The programming on all those options is no better than radio, it's
just custom programmed super-niche, if you will, by the listener.

Radio still delivers audience to advertisers and this is the best
radio advertising market I've seen in decades. If radio is dying, what
a way to go!

Perceptual studies involving radio markets where I"ve been.

The days gone by were not as far back as you've chosen to believe,
step back only 20 years.

The studies I've spoken about have looked at the way listeners
have used radio, and the results indicated that active participatory
listening is not happening with the frequency that it did only 20
years ago. The phrase 'backrground noise' came up in more than half
of respondents in regard to more than half of the stations in the
market. And that when questioned, each of the respondents said that
they didnot use radio as 'background' noise to the same degree when
radio was, in their own words, "serving my needs." This applied not
only to music radio, but talk and news radio as well. The words
'formula', 'bland', 'uninteresting,' and 'corporate,' were top of
the list of words used to describe radio behind 'boring.'
One question that came out of the ether, I thought, produced the
most telling results:
"If your favorite radio station went away, what would you listen
to,"

More that 3/4ths of the respondents in one study I saw, said,
"something else," as opposed to specifics. No formats, no call
letters. No personalities. Just 'something else.'
When asked if it would upset their lifestyle, the same
proportion of respondents said, 'No.' Why? In similar language the
same proportion expressed the position that there was nothing on the
radio worth investing in. That corporations which own radio stations

change formats to suit themselves, and there is nothing the listener can do to stop it. And if the corporations which own radio stations don't care what they think, then they as listeners will not get involved enough to be disturbed by changes at radio stations.

Does radio deliver advertising revenue? Sure. Does formulaic radio deliver? Yeah it seems to.
And that's my point. It's good for radio, to do what radio is doing. Revenues are up, stock prices are high.

The only one that loses is the listener, who simply grows to accept that they are there to provide grist for the mill. Dollars to the Hungerford figures. And what they are paying for, with a few glaring exceptions, is a token.

Yeah. What a way to go.

From Craig Jackman...

------>Oh geez, I forgot about that! We used to clean all the heads in the entire
station twice a day ... 8am and 8pm! Another reason to like digital.<------

Aww, head cleaning wasn't THAT bad. I worked at a Schulke station that required we clean the reel-to-reel heads with EVERY tape change. That was every two hours! We survived, the station sounded great and you could eat off those Scully heads ;-c)

------>Remember the smell of that Ampex headcleaner in the can? With the blue
label? Found out years later that it was a highly dangerous chemical cleaner, that would be considered hazardous material in most areas. Really cleaned the crud off the head better than the alchol we used - and still use, weekly (when I remember) now.<------

Do you mean the carbon tetrachloride? How many years did we use carbon tet without knowing it was dangerous? Eventually, Ampex (and others) had to stop marketing it.

Now let's see who among us is still mired in analog ways and means. Do the following numbers mean anything in particular?

201; 632; 642; 456

How about these?

10-1/2; 7; 7-1/2; 15; 30; 1-7/8

There's something special about carts-
When we were getting ready to switch from Beautiful Music to Hot CHR in 1983, the jocks hired for the format were brought in and asked to dub music from LPs to cart instead of doing an airshift. We were dubbing 24 hours a day. After a while, you get a little tired. I was dubbing "Hotel California", the last song of my shift to be dubbed- and my knee accidentally hit the turntable cabinet, creating a "thump" in the recording. Another jock was in the room with me, and we decided that since it was getting late, we would re-record it at another time. Well, that didn't get done, and the cart with the thump went to air. There's a whole generation who grew up listening to that song on our station that probably wonder why they don't hear the extra "percussion" in the intro anywhere anymore! The cart played at least 6 years on the station!

By the way-

What was it like when you dramatically switched formats? We went from Beautiful Music to Hot CHR overnight, and I didn't know old people could use such language over the phone! It was the worst cussing out I've ever taken!

Tape formulations, starting with Scotch and ending with Ampex.

>
> How about these?
>
> 10-1/2; 7; 7-1/2; 15; 30; 1-7/8

Large reel size, medium reel tape size (you should have thrown in 5 for
small tape size), followed by the 4 most used tape speeds.

> precludes business use.
>

Hmm, it seems to me, that if you're decoding a file, and then
broadcasting it on an analog radio station, that's pretty
clearly an 'internal business purpose.' That is no mp3
formatted sounds ever leave or come out of the building.

> Streaming, yes, but there is no mention at all of a license fee demand for
> simply decoding MP3 files (aside from the license fee that has to be paid by
> the decoder's authors, fifty cents per unit). Not being a lawyet myself,

Yup, one of the side effects of the dreaded DMCA --
that you now want your laywers to go over all the
shrink wrap agreements on all the software you use,
as a business, to see if how you use them is really
legal. Bleah.

Imagine my surprise.

Only one of the studies was from this place. Four others were
from other stations, in different markets.

Source record: 19892

I've used thos long carts, for elevator music, programs and time checks. One thing I've wondered when I've had nothing else to do...I used to, before I worked in radio, listen to WLBC-FM in Muncie, IN, which at the time was automated Drake-Chenault "Solid Gold". Just how did they automate the temperature? I suppose the live AM guy could have recorded "It's 67 degrees in Muncie" every hour but I seem to remember time and temp together with the same voice. "It's 8:15 in Muncie. 50 degrees."

Carts that weren't cued (I once replaced a current hit with Napoleon XIV's "They're Coming to Take Me Away, Ha-Haaa!") unbeknownst to the jock until he pushed the button, and turntables with coins on the tonearm are a part of radio the newbies will never understand. Anyone remember trying to do voice tracks on carts? We did that at KGRC, Hannibal, MO/Quincy, IL. Just let yourself get distracted while recording and miss a break, soon you're introing Dire Straits and playing Barbara Streisand.

When I got married, my co-workers put carts instead of cans on our car.

If you want to find cart machines, I'd suggest a trip to the Dayton Hamvention. I once saw a whole radio studio from the 70s, including the cart machines with the lever to lock the carts in place, an old Gates board, the the device which put tones on the carts, etc.

Remember when playing a cart and the tape skewed a bit, causing the audio to be muffled? Remember the cure? Sure! A pencil stuck underneath the cart (while it was playing) cured it!

This brings back some (rather fuzzy) memories. I worked at WLBC in 1967. It was one of the strangest stations I ever set foot in. At the time, it was an AM/FM/TV combo. I was hired to work weekends, doing a jock shift on AM as well as some news on AM and TV.

The AM was run by board ops but all the DJ shifts were voicetracked on carts. You had to cut all your breaks for a show on 10 1/2 minute carts), and give them to the board op, who had to play the spots and the tunes and get everything in the right order . I remember if you screwed up on the 15th track you had to go back and do them all over. The idea was, a guy could voicetrack a four hour shift in about an hour and then go work in the newsroom, or do whatever else needed to be done (sound familiar?)

The FM was completely automated. IIRC, the time and temp announcements were on individual carts, which the automation would select as appropriate. For the life of me I can't remember exactly how this worked, but they might have been in carousels, if you remember those. The automation took up two or three full equipment racks, but it worked.

Maybe it's because the station I manage is a micro-job (1 watt FM) in an Orthodox Jewish Nursing Home, but a friend of mine and I have long-dreamed of buying the local "Music of Your Life" outlet, and at 6 AM as all the senior-citizens with insomnia are getting up, making a surprise format switcg and cranking out Korn or NIN :-)

Which may also remind you of Ted Nugent's plan in the late 70's / early 80's to purchase Muzak just so he could shut it down!!!!! (Come to think of it, Nugent at 6 AM on an MOR sation would be just as disturbing I guess!)

Ah, it mut've been nice to have someone HELPING you dub the music! When we switched from soft AC to Modern AC, I was the ONLY one dubbing the new library, since "nobody was supposed to know we were getting blown up." It took me a week and a half of 8-hour a day nonstop dubbing to get this done. (And didn't love it when the cart wasn't recued when you went to use it?)

What???? There's alternatives to Carts?!?!?!? :-)

Don't forget the little thumps that carts were prone to when not bulked properly (when working with a low-budget and a small selection of carts, you learned how to pot down really quickly while the carts re-cued).

As I recall, the three sizes of "NAB Carts" (they get their name in everything, don't they) were "A", "B" & "C", with the standard broadcast carts being the "C" size. The A's and B's (never actually saw a "B" cart) were also used by department stores for their in store announcements and occasionaly by Muzak for in-store purposes.

While we're at it, if anybody out there is TRULY nostalgic, I've got an ITC triple-decker with record and tone box. and loads of assorted length carts that I'd be willing to part with for a pittance. E-mail me your best offer (hmmmm, does E-Bay do broadcast equipment????).

Some of those carts even held the legendary voice of that fabled-announcer, David Mark (hi David) at one time :-)

As for Hard-Drive systems, one need only read my BSI postings to learn of their pitfalls (OK, I suppose Audiovault and others in that price-range are more reliable), and I have heard numerous examples of misfired segments on the local 50K (WTAM) as a result of their Hard Drive system going loopy.

Maybe the best solution is to return to the days of live announcers reading live copy :-)

And while we're lamenting the good old days (OK, truth be told, I'm ONLY 28, but I've grown-up in the biz), is anyone out there still teaching how to edit tape with razors and splicing-tape???? Talk about a pending lost-art. Much as I love my dedicated Akai hard-drive, there's still something romantic about cutting a good interview into little tiny pieces and reassembling it all by hand.

Geez, I'm rambling on like an old-timer already :-)

I don't personally have a beef with all AM programming that is
available in my area. However, in a lot of the Arbitron markets, it seems
that there is one AM station in the top 5--most of the time a news/talk
outlet that carries Rush Limbaugh and/or Dr. Laura Schlessinger. The
remaining four spots seem to nearly always be FM stations. Sometimes, the
2nd highest rated AM barely cracks the top 10. I've heard before that
talk radio is the "#1 format nationwide" but another commonly circulated
statistic these days seems to be that 75% of radio listening is on FM.

> kHz so they could fit more stations on the band.

Then I have to ask again, why aren't Clear Channel, Infinity,
Disney, and the NAB doing anything to get AMAX-compliant receivers, which
will be able to at least deliver audio up to 7.5kHz, on the market? With
most contemporary radios, the high end starts rolling off around 2.5 to
3kHz, and many also roll off the low end. As a result, broadcast stations
end up sounding like TIS "talking roadsign" stations, which are required
to restrict their audio bandwidth to 3kHz.

1754. Cart Machines & Memories

Newsgroup: rec.radio.broadcasting
Date: 2000-04-18 00:00:00 UTC
From: DAVID MARK <verbiage_spewificator@juno.com>
Message-ID: <20000418.012821.-428467.0.verbiage_spewificator@juno.com>
Source record: 19760

First of all, Craig Jackman got all my trivia(l) questions right. Yes, I should have included 5 for the 5 inch reels...or 5-3 for the low torque 5 inch reels. I forgot. Oops!

Muffled audio from some Fidelipac carts was usually caused by bad pressure pads. You had to look at the pads and make sure they were firm and had a small piece of plastic across their face or the cart wouldn't seat properly, causing the muffled sound.

Shawn Fink (Hi, Shawn...say "hi" to your dad for me) mentioned the "little thumps" on carts that weren't properly bulk erased. Those thumps actually had a technical name. They were called spokes, and usually occured if someone erased a cart too quickly (some things just can't be rushed) or switched the bulk eraser off while the cart was within three feet of it. Even when properly erased, some carts had a thump at the very beginning. This happened because the eraser would loosen the tape pack in the cart. To avoid the problem, you had to take a properly erased cart and run it in the play mode for about two seconds before recording on it.

Shawn also mentioned NAB type A, B, and C size carts. The A carts were the ones most of you are familiar with. Well packed custom-wound A carts could hold almost 12:00 of tape. The standard maximum length for carts purchased already wound was, IIRC, 10-1/2 minutes. The B carts would hold about 21 minutes of tape while the monsterous C carts would hold up to 32 minutes of tape. Cart machines had to be slightly modified to play B and C carts. The modification was to remove a tape guide that was situated to the left of the cart in the playback deck. The guide was usually placed to accommodate A carts, but the cart machine's playback surface where the cart was placed would have several pre-drilled holes so the guide could be moved to allow the machine to run B and C carts.

Shawn said he's willing to sell his old ITC 3-banger deck and some carts that once had my voice on them! Hmm. If my voice was on those carts, you can be sure those carts are so old, they probably have graphite stabilizers in them (I believe Fidelipac did away with the graphite stabilizers - they looked like pencil leads - in the mid-70's)!

Shawn also wrote...

---->...and I have heard numerous examples of misfired segments on the local 50K (WTAM) as a result of their Hard Drive system going loopy.<----

I don't think WTAM uses a hard drive system, at least, not to any great extent. They still use carts a great deal. I think another local 50K, WRMR, does use a hard drive system extensively. I don't know what that

other 50K, WKNR, does, but I suspect they also use a lot of carts.

Moving along, Brad Lovett and Mark Howell wrote about working at WLBC in Muncie, IN. I never worked there, but I heard it often when I was the Program Director down the road at WTOO and WOGM in Bellefontaine, Ohio, in the early and mid 70's. Brad asked how automation systems in those days handled time and temperature in the Drake-Chenault Solid Gold format. Both were on large carts (size C) or on reels. The temperature might have aired with the time checks, but would have played from a separate tape deck. As did almost all radio automation systems in those days, events were triggered by a 25hz trigger pulse on the left channel of the reel-to-reel tapes. The tones would trigger the next tape one second before the next audio was needed. This allowed the reels to reach speed without "wow" and "flutter" (when was the last time you heard those terms?). The audio from the first tape would remain live until the tone ended, so it was possible to create some interesting segues if you knew how the system worked. Anyway, if the system played, "It's 8:22 in Muncie. 71 degrees," one tape played the time check and the temp came from a different tape. There were several ways to air current temperatures. The simplest way was to have a local announcer record a temp check every hour. Some systems would have a cart in place with several temperatures that were close to the real temperature. The radio said 71, but the actual temperature might have been 73. Hey, they were close. If the weather changed, the board op would change the carts. Remember, in those days, there were no unattended stations. They might have been automated but, by law, there was always somebody there.

Yes, I was thinking of the old Class D stations. Actually, I was
once affiliated with a station that had signed on as a class D but later
increased power when the license class was "discontinued." Our HAAT
remained at 38 meters. The closest co-channel station was another Class D
that was located about 60 miles away. How closely did co-channel Class Ds
get allocated? Theoretically, I can see how multipath could have caused a
car radio to alternately capture the signal from several of these low
powered transmitters...But were there ever enough Class Ds on the air that
this problem would have occurred under normal reception conditions?
Here's an interesting turn to the story. Due to transmitter
problems, we were once forced to temporarily broadcast using a 10 watt
exciter. On a car radio, the signal was audible up to 15 miles from the
transmitter. Most of the inteference, however was from front end noise
and receiver intermod products rather than from the neighboring co-channel
station (which had increased power to 4,000 watts).

So many people have called and e-mailed asking "What's available in my area?" and I CAN'T do that many searches for free. So, I'm doing the next best thing and publishing this list of availabilities or "soon to be" availabilities.
For more information on any of these frequencies, go to http://hawkfm.tripod.com and look around a bit.

5,000 watts (non-commercial) in northeast Texas with a 328 foot HAAT. (CAN be upgraded to 100 kw.)

6,000 watts (commercial) in northeast Texas with a 328 HAAT.

15,000 watts on the Texas Coast of the Gulf of Mexico, 500 feet HAAT.

50,000 watts (commercial) in southeast Oklahoma, 500 feet HAAT.

25,000 watts (commercial) on the north Florida Gulf Coast, 328 feet HAAT.

6,000 watts (commercial) just outside of Modesto, CA., at 328 feet HAAT.

100 watts (non-commercial) just outside of Dallas, TX., 100 feet HAAT.

100 watts (non-commercial) in Monroe, LA., at 100 feet HAAT.

100 watts (non-commercial) in MacClenny, FL. at 100 feet HAAT.

100 watts (non-commercial) in Modesto, CA., at 100 feet HAAT.

100 watts (non-commercial) in Livingston, TX., at 100 feet HAAT.

100 watts (non-commercial) just east of Gallatin, TN., at 100 feet HAAT.

100 watts (non-commercial) in Kingston Springs, TN., at 100 feet HAAT.

100 watts (non-commercial) in Virginia Beach, VA., at 100 feet HAAT.

I'm 29 and have been in radio since I was 16. The station I started at is the one I work for now, which as many of you in the Dallas area know, is KEOM-FM 88.5 I was a student DJ from 1986-89 and was hired in 1990. This coming September marks my 10th year of employment there.

Not too many people spend 10 years at one station anymore, do they? <g>

And yes, the student DJ's in the program are taught tape splicing!

>Geez, I'm rambling on like an old-timer already :-)

I do it all the time :-) Maybe that's why no one listens to me anymore, LOL!

That's a good point. Even moreso, would you say that if you
were previewing songs on MP3, say from a friend at another station, and
weren't going to broadcast them, woudl that be illegal, since it's not
strictly personal use?

Use the Kodis service on Elliott's web page and look up Chicago and 88.1, 88.3, 88.5, etc.

There are 5 stations on 88.1 within 25 miles of Chicago, 3 on 88.3, 5 on 88.5, 2 on 88.7, and 3 on 88.9 MHz. On 88.3 MHz, WZRD is 100W @ 72ft nondirectional, WXAV is 150W directional [8.3W toward WZRD] @ 150 ft HAAT less than 19 miles away ,and WDGC has 250W very directional @ 131 ft less than 20 miles away. Only 2 of these 18 stations are still Class Ds. Most are running 100 or 150 watts. I suppose some of the stations share time.

We just did that. Our soft-AC station was in a fringe market just outside the urban area, with a stable, older audience. Management converted it to alternative as a complement to our classic rock station, and to freeze out the other rock station in town.

The change over was classic. 6pm New Years Eve (remember the concerns about Y2K?) coming out of "I will always love you" into End of the World sounders and Silverchair. The sign on went on for about 5 minutes. It was beautiful. We got complaints for weeks.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

Source record: 19772

In dredging up old analog memories, Rob Andrews wrote...

---->Century 21 music reels that snapped when you pressed stop after rewinding<----

Not only Century 21's reels...ANY tape would snap if you went directly from rewind or fast forward to stop. In those days, decks didn't have logic switching, so pressing stop while fast winding would really put on the breaks. Standard one mil tape would snap. 1/2 mil tape would stretch. The proper thing to do was to rock from rewind to fast forward to rewind. This would slow the reels down enough so you could press stop without damaging the tape. In the 70's, manufacturers developed logic switching where, if you pressed stop in fast forward or rewind modes, the deck knew to apply its brakes gently.

Just thought I'd offer this info in case some newer broadcasters come across older tape decks and don't want to destroy their tapes.

They are actually back on the air now. They are omni directional with
something less than 100 watts until they get the directional array built
(the old 3X3 array on State Road 3 was torn down last summer).
The format is religious.

Does that agreement actually convey a license to practice the MPEG
patents? If it does not, you're looking at the wrong agreement.

1771. End DGS Hassles Forever!

Newsgroup: rec.radio.broadcasting
Date: 2000-04-18 00:00:00 UTC
From: Scotty <rosencrantz@flashmail.com>
Message-ID: <sfpd58leiun6@corp.supernews.com>
Source record: 19777

I can't be the only one who's noticed that Digital Generation Systems, in the year or so since it gobbled-up it's direct competitor DCI, has had a serious deterioration in the arena of customer service.
I have spent a great deal of time on the phone with my rep at DGS (Tom Falcone) who basically informed me that DGS wasn't much interested in finding a solution to the problems I articulated. The only suggestion he had that addressed the problem would have required our facility to install a DEDICATED ISDN line at our own expense, but for the exclusive use of the DGS "CW" terminal. I don't have that kind of budget to spend on a company who is already charging our advertising clients to send spots. DGS wants to make people pay on both ends! Imagine if FedEx tried to do that! (DGS was very apologetic about all the spots they --oops-- didn't get to us in time for their schedules to start. Sorry doesn't pay the bills.)
Well, I got a brochure from a company in San Francisco that's building a network of participating stations for a FREE web delivery system. I've been using the internet to deliver MP3 spots to freelance clients, and I'm glad to see that someone is putting together an alternative to DGS, as I'm sure their must be many other people fed-up with their declining quality of service.

Here's the link to the website: http://www.spottraffic.com

The more stations they get registered, the better the service will become. And DGS could use some healthy competition for a change.

I listened to the first hour of the Magic box with Jon Grayson on WTN on April 5th. I had knee sergury early on April 6th so didn't turn the radio on until late Friday 7th as the show was going off. Richard Bachschmit was hosting and said he'd be back on Monday night. Richard Bachschmidt occationally substitutes for Jon so I didn't think anything about it. Last night I turned on the radio and heard the intro to the Richard Bachschmidt show at the time Jon Grayson's show comes on. BTW, when Richard substitutes for Jon he uses Jon's intro. Jon is no longer listed as one of the personalities on WTN's web site. In my oppenion Jon had the best talk show in Nashville.

That's the only agreement they show. SInce Nullsoft is shown as an MP3 licensee, I can't conceive of them not conveying whatever rights are necessary to use the product in accordance with their license agreement -- I doubt that they would have been able to license the MP3 patents otherwise.

Now if we were talking about an MP3 decoding program whose author isn't licensed, that would be a different matter in which both the author and business users could be liable, since the author has no patent rights to convey. (This would be similar to the big stink over EAS patent infringement.)

> WRMR, does use a hard drive system extensively. I don't know what that
> other 50K, WKNR, does, but I suspect they also use a lot of carts.

Actually, TAM switched to hard-Drive a few months back. Bil Wills, the Am Drive guy had a hell of a time trying to get it to fire properly the first week (traffic sounders in the middle of Paul Harvey (an improvement if ya ask me), and ads popping up instead in the middle of news breaks. They complained bitterly about it for a while on-air. They probably still use carts for actualities though.

I can't remember who the spot was for, but about 6 months ago, TAM was running an ad that started out with the voice slowed down (might've been Nextel, now that I think of it) and it graudaly got faster as the ad went on. First time I heard it, I thought that the cart had gotten screwed and locked up, and apparently so did Wills (he runs his own board), because they cut the spot and went to the next immediately. Few mornings later, when the entier spot ran, I learned it was intentional. The lesson: All you production people out there, label those carts with a warning if the audio is intentionaly a little funky :-)

As for the ABC's of cart sizes, guess I had my sizes backwards, but I do remember seeing the B & C sizes, the way they loaded the tape inside them was truly bizzare!!!

I also have a pair of really ancient Spotmasters (manual load!) single decks with record electronics in need of some TLC to get them running again, or useful as weights in your personal workout program. If anybody has a home for these Jurassic puppies, let me know, we'll talk price :-)

Much as I miss the feel of working with carts, the day I updated my studio to minidiscs, was the day that marked a HUGE improvement in reliability and sound quality (OK, we also went from carrier-current AM to 1-Watt FM, so that accounts somewhat for the sound quality).

PS (for David) -- Dad says "hi" and he'd like to talk to you after Passover.

Mark Howell, I didn't realize you had ever worked in
our neck of the woods. Thanks for the story. WLBC
still was a little strange in the 70s. Apparently,
they were IBEW-unionized until the late 80s. That must
have been the reason for all the board ops in the 60s.
I didn't hear a lot of the AM but I remember Don
Burden's editorials on the FM, mostly being upset
about the ban on broadcast cigarette advertising.
WERK, when I was in the area, was an interesting
station, with the 6-tower array and the Top 40. I
remember a signoff like "We now pause 10 hours and 15
minutes for station identification. WERK, Muncie. WERK
is apparently back on 990, and the calls live on with
an FM at 104.9, simulcast with the old WBMP, Elwood
(some interesting stories from there, too) serving
Anderson with the calls WURK.

I remember when WMEE Ft. Wayne moved the CHR from AM
to FM, replacing WMEF's BM programming. I said I
wouldn't want to be in a dentist's chair when the
programming shifted at 4pm.It wasn't as abrupt as it
could have been, they went from the last BM song to
the jock and PD announcing the change, to Steely Dan's
"FM". Meanwhile the AM shifted to country, going from
"Who's That Lady, by the Isley's to "Rock and Roll I
Gave You All the Best Years of My Life" by Mac Davis.

Are there any refugees from Vern Kaspar's WILO/WSHW,
Frankfort, Indiana in this group. There must be, we
used to joke that we wanted to have a staff reunion
but the Hoosier Dome was always booked...

I want to hear a station go from rock to classical,
say "10 in a row", play nine rocks, then go to the
first vocal line in the finale of the Beethoven 9th
Symphony.

WHAT AN INSULT TO THE ROCKERS!

> station, with the 6-tower array and the Top 40.

There was a pipeline that ran right through that 6 tower array and I remember when the pipeline company came through and replaced some of the pipe. They couldn't figure out why they were hearing music through their metal detectors. We had to fasten a bunch of ground radials back together after they did their work. They had no idea why those wires were so important to us. That system was surprisingly stable. I remember the consulting engineer saying that he could have designed it with 4 towers, but put the back two in to make it more stable. I heard that the new construction permit calls for 3 towers. The regulations must be a little looser now than in 1965.

Wow! There's a subject that I'd completely cleared out of my conscious (or otherwise) memory. I always ran a board with all ot the pots down on anything that was still recueing, since, even with the two second rule, there was still that "spoke" that would definitely "speak" if the pot was left open.

I recall an ITC single deck that we used on the air at KOMA. It was serial number 1 of that particular series, and ITC would pester us periodically to see if they could get it back for their archives. Storz, being as tight as they were, always said "no."

Keeping those heads clean caused a wee problem for me once. At the late '80s WDGY, the cart machines were mounted above the board in a closet-sized on-air basement studio in St. Paul. In order to clean the capstan and pinch roller, you had to slide the inner chassis of an older ITC single deck out.

One Saturday morning, smoke started billowing out from behind the row of ITCs. Since they were recessed into the wall, I couldn't tell exactly where the smoke was coming from. In no time, the "closet" was filled with smoke, but somehow I managed to segue a few songs together. Shortly thereafter, the smoke stopped, and I eventually found the originating source when the affected cart machine wouldn't, um, fire.

It turned out that the insulation had worn off of one of the wires from the repeated opening and closing of the cart deck for cleaning purposes. The smoke stopped when the fuse in the ITC finally blew.

Others have mentioned the perils of carbon tet. I'd have almost preferred that to the delightful - and long-lasting - aroma resulting from spilling the ENTIRE bottle of rubbing alcohol all over the studio countertop. (How do you explain to the listener who wonders, "what is he *on*?") I wish that I could say that it only happened once....

>Dan Ingram was the Morning Mayor at WNHC AM&FM in New Haven in 1959.

Speaking of great New York City air personalities, another former Dan Ingram colleague in WABC's glory days, Harry Harrison, has been the Big Apple's "morning mayor" over on oldies-format WCBS-FM for 20 years now. Heard Harry during a recent visit to NY and IMHO he's sounding even better now, than when he was doing mornings on WABC.

(As for Dan Ingram, he is semi-retired from radio and spends most of his professional time on voiceover work, but still does Saturday and Sunday afternoon shows on WCBS-FM as well, to keep his hand in. And he still sounds great. I wish Rick Sklar's SuperRadio network idea had gotten off the ground in the '80s so we all could have heard these guys wherever we were, instead of having to go to NYC to check them out.)

I agree with Sid Schweiger, that this one may well die with a Presidential veto. Soon afterward, LPFM itself will pass away, not with a bang but with a whimper.

Why? All you need to do is go to the FCC's own site and head for their database and calculation area for determining which, if any, LPFM allocations are viable in your area. You find something interesting in most markets...maybe one or two 10 watt, no-coverage transmitters can be set up in most heavily populated areas. 100 watters will be few and far between, except in less populated outer-ring suburbs and rural and small town areas.
These stations will be hard pressed to develop enough of a listenership and revenue base to survive and maintain their programming commitments. They cannot sell advertising, and to try to develop a base of underwriters and members to back them in the way full-service public stations do, is an impossible task. The only groups that are likely to be able to build and sustain these stations are the same educational and religious bodies that used to build the old class-D low powered FMs that Uncle Sam licensed in the early days of the FM band.

If anyone's expecting LPFM to be a real alternative to the conglomerates that control large market commercial radio these days...they should adjust their expectations downward a few thousand notches. This was a small sop to those who are concerned about concentration and lack of local service or creativity in programming. A meaningful change, like rolling back the number of stations any one company can own in a single market and/or all markets, or restoring the old rules that once mandated a minimum of local origination and public service programming, isn't going to come just yet.
It WILL come when a combination of tougher economic times and growing listener disenchantment catches many of the over-leveraged radio conglomerates in a financial squeeze and forces large scale divestitures. When that day comes, early in the next recession, many of these stations will be spun off and fall back into the hands of local owners simply because the big boys will be too leveraged to keep operating all of them, keep servicing their debt, and stay in business and out of bankruptcy court. We got a preview of that when Sinclair hit the wall and had to spin off all its radio holdings early last year (although Entercom and Emmis came to their rescue in this case). We're a few years away from the more general national shakeout right now. But it's coming. And when it does the conglomerates won't be in a position to save each other the way they bailed Sinclair out. That's when you will see radio become live, local and locally owned once again.

LPFM doesn't matter. Few of us will ever hear such a station, and fewer still will form any sort of regular audience for it. Local radio will make a comeback, but economics will have a lot more to do with it than any regulatory body.

The full House has passed HR 3439, which would severely curtail the LPFM service the FCC has proposed. The Senate has yet to vote on it, but most pundits think it will pass there too. It still faces a likely Presidential veto.

Actually, Sid, since the House had a 2/3 vote, the presidential veto will be
overruled if they have the same 2/3 majority.

From Shawn Fink...

----> Maybe it's because the station I manage is a micro-job (1 watt FM) in an
> Orthodox Jewish Nursing Home, but a friend of mine and I have
> long-dreamed of buying the local "Music of Your Life" outlet, and at 6
> AM as all the senior-citizens with insomnia are getting up, making a
> surprise format switcg and cranking out Korn or NIN :-)<----

The Kenston School District in Bainbridge and Auburn Townships in Ohio owns an FM which puts out a hell of a signal. Its 1kw and HAAT of about 250 feet give it coverage of much of Cleveland's east side. The station is used for the district's broadcast arts (isn't that an oxymoron?) program, but it's actually operated by a group of area citizens. The "older folks" run it mornings and evenings, it's automated from a hard drive overnights, and students run it from noon until 6pm. For five or so years, the adults played a Big Band format while the students played Alternative Rock. Each weekday at noon, the ground would tremble with the vibrations set in motion by thousands of radios being switched off or on :-) A couple of years ago, the powers that be declared the students will also play the big band format. Unfortunately, nobody bothered teaching them who the artists were or how to pronounce their names, leading to some on-air faux paus that, depending on your mood, either made you laugh or made your rectum pucker.

On the same topic, Doug McDonald wrote...

---->I want to hear a station go from rock to classical,
say "10 in a row", play nine rocks, then go to the
first vocal line in the finale of the Beethoven 9th
Symphony.<----

In 1970 or 1971, Cleveland's WGAR underwent a major format change, switching from its old line MOR format (prune tunes) to what was called Adult Contemporary. For a week prior to the changeover, the station went all request, playing only songs requested by listeners. The local Classical station, WCLV, took advantage of a golden opportunity to rib WGAR while flexing its own muscle a bit. For the entire week, WCLV urged its listeners to call WGAR and request Stravinsky's "Rites of Spring." At the end of the week, WGAR had several thousand requests for Rites of Spring and ended up playing it (buried in a less-than-desirable time slot, of course)!

Source record: 19797

From John Pratt...

---->I always ran a board with all ot the pots down on anything
that was still recueing, since, even with the two second rule, there was
still
that "spoke" that would definitely "speak" if the pot was left open.<----

I always ran boards with unused pots down because, in those days of tubes and transistors, every and any piece of equipment feeding the board added some hiss to the final product, and there was also tape hiss from carts. Potting down carts eliminated the tape hiss as the cart rolled back to its beginning as well as eliminating the loud spoke as it recued (or eliminating an instant replay when the cart didn't recue).

It's a habit I have to this very day, even though it isn't necessary to eliminate noise from open CD players.

Speaking of eliminating noise, one of my all-time pet peeves that I would almost smack board ops' hands for doing was starting turntables with the pots up. At stations where I was PD, Station Manager, or GM, I always made sure the engineer removed any remote start capabilities from the board keys. Starting turntables with open pots would, on noisy records, accentuate the noise as the record started and rolled up to speed (even with the "super fast" start-up speeds of the Sparta/QRK turntable clones in the early 70's). Even with good vinyl, if the record was cued too close, it would wow. Someone mentioned slip-cueing. I allowed slip-cueing (though I rarely did it myself) IF the board op had the pot down. If you want to know why, set up a turntable and slip cue a record with the pot up while actually listening, or watch the VU meter. Finally, several people told me they never heard the "thump" when a turntable was started with the pot up. That's because they never listened on a good home receiver. They usually listened on a car radio or to a cheap little transistor, but on a good receiver, you definitely could hear the "thump" of a starting turntable. The argument posed to me was that few people listened on good receivers. My answer was that the only good technical operation is a transparent technical operation...one the listener is totally unaware of hearing, and that included any listeners who were fortunate enough to own good receivers.

Right or wrong, that's how I felt. And still feel, even though I'm no longer on the air and I rarely run boards for my own productions, anymore (bless ISDN and my Telos Zephyr).

I've noticed a few of you mention keeping the pots down while carts recue, to prevent spokes from going on air as the carts recue.

You guys must be using boards that don't close channel when the secondary tone on the cart comes up, right?

>

Me, I always thought that the problem was that instead of trying
to squeeze in these stations on the FM band, they should have instead
gone for an entirely new broadcast band, specifically for small
broadcasters. Putting low power FM stations on the FM broadcast
band is just a disaster from all kinds of perspectives, imho.

How, I'd do it, is to set aside one of the TV channels that'll become
available becuase of the HDTV business. And, then divide that up into
600, 10khz AM radio channels. Then, rule that new radios would have
to support this band. I'd set an antenna height limit around 36
feet, that is the height of one of those Radio Shack antenna masts,
and a power limit of around 40 watts or so.

I'd make a simple test, where basically, you had to show that you
had some clue how to turn on a transmitter. You should probably
know what a 'frequency counter' does, and maybe know what
intermod is and some basic stuff like this.

If you pass the test, they basically just assign channels on a
first come first serve basis. But, if you don't use it for
a year, you lose it. Maybe have a license fee of around $100
a year or something, and assign call letters, sort of like ham
radio. I'd go for no restrictions on content, and no
restrictions on advertising.

With a 10khz AM signal, rather than a wideband FM signal,
the power density would be higher, the low power would
sound pretty good across a small city -- that is just
judging by what 40 watts does on ham radio. The audio
wouldn't be great, but at low power, your audio isn't

going to be that good anyway, so I think, just plain
AM, would probably be fine. I'd make some rule where
if you caught someone breaking the rules, by running more
power, you could get their license pulled, and take
over the channel yourself.

Probably, it would probably be a huge hassle, from the
FCC perspective of managing the thing, and I think
it would be mostly dreadfull to listen to. But, still
I think some people might have some fun putting up
little radio stations, and really, it wouldn't be the
end of the world or anything.

why did collins ever make a 31 minute cart is beyond me as well....but
I have one....as you probaly know, there's a pic on the 8 track heaven
site...used as a emergency backup cart.....circa early 1970's...based
on the radio station jingles and music on the thing....my old gates
can easily play the things that large....had to replace the sponge
pads, taken from a audiopak shell and a little epoxy.....but played
fine considering the age.

>>BTW, if you REALLY miss the carts, buy a machine...a few have been

>station that used carts for everything and never had the chance. I figure next
>best thing would be a net only station that's part live and part auto. Live
>stuff would be all tape carts.

indeed....I started with carts actually.....in the mid 80's.....what's
a record??? except for syndicated shows like dick clark's RRR, we
never played vinyl to air...and boy, those could be fun as they were
pressed so cheaply, and united stations would cram up to 31 mins per
side, counting all the US nationals....made for low levels and higher
then normal background noise...oh well....only played once....

>Well hey, I can dream, can't I? <g>
>
>But seriously, one of these days I'll get a couple of decks...

well...I have two gates and a audicord E26 going into a set of radio shack mixers.....works well for now....must get a console one of these days...though they are still quite pricey...

>My next question is.. which tape cart do you like the most? I always
>preffered the ITC's (formerly known as Scotchcarts) because of the "no pressure
>pads or moving parts" system they incorporated. The AA-4's from Audiopak...
>geee I love having worn pressure pads give while playing one.

up here in canada, some engineers out west came up with their own make, called ARISTOCARTS. used throughout the 80's, and quite durable, i have quite a few of these the station i work for trashed because they recarted everything on audiopak's because of a alignment problem..which is a bit weird, as I haven't had that much of a problem on my decks. I also have audiopaks which I find quite rugged. I only got a few scotchcarts when I bought my audicord from florida, as i have heard about them, but never actually had one....I can see why they would be preferred....no pressure pad....tape moves instead of a middle wheel. I also heard they were rather pricey. Most of the stations I know up here in recent memory use audiopaks.

my station always recommended a head clean every tape
change....whether or not we did is another story....I do it quite
often for my own reels...depending on the tape condition of the tape
being played back.

>------>Remember the smell of that Ampex headcleaner in the can? With the

WTAM uses Prophet I'd assume like the rest of the Clear Channel Family in
Ohio.. Prophet's know to make mistakes.. Expecally if things are not in
the log in the right order.. IE Traffic schedules Commericals into the
prophet log where the sounder for traffic goes, or what not.. Things can
start firing at the wrong time and place...

time for me to comment on some things.....

"To avoid the problem (spokes), you had to take a properly
erased cart and run it in the play mode for about two seconds before
recording on it."

interesting....in my 15 years in the biz, I have been doing this
automatically....mainly to check to see for sure it was erased before
recording.....now I see yet another benefit.....

>Speaking of eliminating noise, one of my all-time pet peeves that I would
>almost smack board ops' hands for doing was starting turntables with the
>pots up. At stations where I was PD, Station Manager, or GM, I always
>made sure the engineer removed any remote start capabilities from the
>board keys.

I know the exact sound you mean...especially from technics SP-10's or
15's....it's very distinct, and depending on what you are doing, you
can easily hear it. I few local shows at my station were produced that
way...and I have to say I had to do that in some cases, because I
didn't have enough hands.....especially for commerical
production..when you want to do the whole thing to reel and have a bed
on vinyl, and a effect off the top....but I tried to avoid it. I
happen to come into 3 BBC transcription discs from 1972...3 hours of a
13 part beatles special a friend gave me.....I listened to it on a
pair of headphones, and was a bit surprised by the sound of the
turntable "thump" of a open pot on the disc....you'd think the BBC
would avoid something like that.

now...back to carts....

i've done libraries numerous times, had jammed carts when I try to
play them on air, and all the typical problems like machines eating
the things, but the most unusual situation for me, was when I was a
overnight jock. teeing up over the intro, all of a sudden I started
seeing tape coming out of the ITC tripledecker......spilling on the
floor. I can guess that the splice came loose just after the cart was
started, and out came the tape evenly onto the floor....instead of
stopping the song on the air, I decided the help the tape out....and
well, I got one last good on air play out of the cart before it
crapped out.....beats dead air anyday.

I'm not quite so sure. Given the minimal resources for enforcement,
these stations might be a lot more commercial than the rules envision,
and bring down the rural mom&pop daytimers. Maybe they'd both fail.

> The only groups that are likely to be able to build and

And I suspect they may be the majority of LPFM operators, through their
local affiliated organizations. But many of them are now operating vast
fleets of "translators". Despite the rules, will we be able to tell
their LPFMs from their translators?

We will know the answer to this when the first filing window closes.

The MAJOR problem with Cathryn's proposal is that it doesn't give instant gratification. IMO, TV stations will do their very best to NEVER give up their second channels. This will drag on for years in any case. Most of us would be in our wheelchairs [or worse] if we waited to take over empty TV channels. And other interests would probably bid far more money. Politicans would want to balance the Federal budget **this** year with big lump-sum bids, not $100 a year per station forever.

Rob, when I started back in 1978 the Gates "yard board" and the ITC three stack that we had in the AM studio wouldn't have recognized a secondary tone for all the money in the world. We were just lucky it worked 50% of the time.

While, we're on the subject, let's see the number of hands of the people whose real reason for missing carts is that the studio/newsroom is now short a couple of projectiles through which professional broadcasters vented the occasional occupational stress!

Only problem is that, because of today's lackluster programming, radio listenership continues to fall each year. By the time this comes full-circle, it will be too late. The 800+ station borgs will have killed radio as a primary medium. Cheap signals will be available, but no listeners.

I think Cathryn is on to something, if you put in a few adjustments. I propose, and
will be proposing to Heather Wilson, New Mexico's congresswoman who is largely behind the new LPFM legislation, that congress mandate the FCC and the IRAC to allot a segment of what is clearly largely wasted spectrum between 225
and 406 mHz. to a new LP service. Mabye 25 to 50 kHz. channel spacing, less power than the current LP100, mabye 10 watts ERP at 30 meters HAAT. Different assignment standards, using the capture effect of FM, just pack more and
more stations in urban areas. Everybody's range would be reduced, but everybody
could get on the air. This LPFM plan as now proposed is ridiculous. Trying to
place these little signals in the current FM band is folly, and with any reasonable
allotment standard, you cannot put a significant number of them in any urban area. I am a full power broadcaster who feels strongly that anyone who wants
to broadcast should have a radio voice. It will be good for freedom in this country.

From Rob Andrews...

---->I've noticed a few of you mention keeping the pots down while carts recue, to
prevent spokes from going on air as the carts recue.

You guys must be using boards that don't close channel when the secondary tone
on the cart comes up, right?<----

Some of us old farts go back to a time before carts had secondary and tertiary cue tones ;-) I forget which was which, but one of them (the tertiary, I think, though I could be wrong) could actually be heard on the air if you had a good speaker and a good set of ears. When I was at the old 1260 in Cleveland, that tone was used as the EOM warning while the other was used to autofire the next cart. Some of the folks who carted the music would tape the EOM warning tone several times, and the resulting high-frequency sound, which I was able to hear perfectly, drove me nuts! I could hear it at home, too, even though most people couldn't.

Source record: 19813

On a limited basis WFAA-TV still uses audio carts.....for voice over credits at the end of programs and local announcer spot tags ('starts Friday at a theatre near you'). We 'upgraded' to the BE Phase Trak 90 machines probably about a year before the 360 Systems Digicart hit the market. Except for the above uses everything else now airs from the Digi's.

As handy as Digicarts are, I was a little put off when they swapped the original bernoulli drives for the zips. Sure I've converted all our machines to zips but it wasn't cheap!

Clunkiest cart machines I ever used were the 60's vintage RCA's.....at my first radio job we had 3 in the control room and you were lucky to get one to load, play and stop properly. Spotmasters and Tapecasters were dream machines compared to the RCA junk!

One small problem: who will be able to HEAR the signals? Most police scanners
do not even recieve this chunk of frequency spectrum.

Of course, the NAB would probably support this initiative, since nobody would
be able to hear these LPFM broadcasters.

[continued from previous reply]

I can tell you from experience that groups =more than= twenty years ago included respondents who, back then, told us that radio was no longer serving their needs, that it was boring, that it had become mere background noise, that they no longer could name a "favorite" station, that radio stations were being programmed for "other people, not me", etc.

Research can be poorly done or can be poorly interpreted. Anyone who looks at a snapshot in time and draws conclusions without putting things into perspective is asking for trouble (or is using the research to support his own preconceived notions).

I am not suggesting, by the way, that research is not of value nor that station owners should think that everything is perfect when there are complaints and negative opinions which turn up in valid research and elsewhere. I would suggest, however, that the station which does not put things into perspective will throw the proverbial baby out with the bath water. I always hope that those stations are competing with my own. <smile>

I would respectfully suggest, Peter, that you may not be looking at the "big picture". I have probably been doing research in radio for longer than you have been =in= radio. The negative descriptions which you cite are nothing new.

Also, the only way to determine from a perceptual study that "Listener loyalty is at an all time low" is to conduct the study longitudinally -- that is, continuing over time. To ask someone in 2000 (or whenever your studies were done) whether he or she is less loyal to or less interested in radio today vs five, ten, or even twenty years ago is of limited utility unless one can look at the same question having been asked of a similar group twenty years earlier.

To begin, I started in radio when I was 6. That would be 44 years.
So I question your assertion.

But to address your point, you're right, there is nothing new in
these complaints.

>
> Research can be poorly done or can be poorly interpreted. Anyone
> who looks at a snapshot in time and draws conclusions without
> putting things into perspective is asking for trouble (or is using

> the research to support his own preconceived notions).

Absolutely. And of the stations I've been involved with, supporting preconceived notions was the bulk of the reason for doing research. Those stations did remarkably well for incredibly short periods of time, and then vanished. The long term successes were the result of fierce arguments in house that finally forced a long and objective look at what the research was really indicating and relaxing the grip on long held practices that were, in effect strangling the stations, especially in light of the growing number of quality signals, and programmers. However, recent acquisitions by the BIG FIVE and subsequent shifts in corporate culture in the wake of consolidation have resurrected the very practices that threatened to strangle individual stations in the first place. In house phrases like, "record profits," " all time highs for advertising revenues," and "stock prices are up again today," have replaced phrases like, "we resolved that complaint on line X," "community involvement," and "this ought to be fun," as an example, though there were hundreds more.

My point is not that research is not valid, and that the formula doesn't work, but to look at the big picture, how much of the current TSL at radio is a result of listener resignation to the offerings that have been decided for them and how much is due to genuine interest. The research I have been referring to specifically addressed the listeners' perceptions of radio and the general feeling that radio was doing what was good for radio, and that listener needs are addressed by no more than 'lip service,' especially in the era of consolidation, where strategies include using two or more stations in the group to protect a dominant demographically desireable station.

I"ve been involved in three stations that went on the air with promos that hawked the 'we're trying to build a better radio station, and we want YOUR comments' line. The language of the callers was coached, and preselected to fit the predetermined direction of the station. The calls piling up on the auto answering machine were never heard, only erased twice daily. Nice gimmick. But the listeners, suspicious anyway, clued into to many of the tricks of marketing and manipulation of public opinion, weren't buying it. They were resigned to accepting the station as offered, as a stopgap measure until something better came along. Or met their own needs with their tape and cd players. Stations believing that they were in a virtual monopoly or dominant position simply did what they did. And used research to support it. And when someone finally went head to head with them, beat them to paste. Again, nothing new. This has been going on with stations since the beginning.

My concern, is that listeners are becoming more marketing savvy of late, and that they are seeing radio for the corporate entity that it is today. And while there is still a strong revenue base to

support radio, the essential elements of contact are eroding to the point that when a viable alternative finally arrives, radio will suddenly have to face issues that will determine its very survival.

Take a lesson from the car industry. All the research showed that Americans like big cars. Luxuriosly appointed. Lots of steel and lots of flash. Not a lot of quality. General Motors built its dynasty on just such thinking. Ford, on price. Chrysler, on engineering and styling. All the while American car buyers were complaining about quality. Reliability. And the fact that American cars were about shot after 50,000 miles.
And then the Japanese entered the car business in this country. And corporate decisions didn't change. General Motors did what was best for General Motors. Detroit served Detroit. And laughed at the Japanese cars. And the people who bought them.

What happened? Americans noticed that Japanese cars were running longer. Smaller, more efficient, and sales rose. Detroit paid lipservice to public interests and continued on as it had. And when the gas crisis hit, a sea change took place, literally overnight, and Detroit was faced with a sobering reality: that it had misjudged the market, and in its arrogance, run off it's customers. And that the research had been asking the wrong questions.

Chrysler almost disappeared. Ford stumbled, GM crashed.

What was ironic, was that the Japanese auto industry was using techniques to build its business that were the brain child of an American, who created this program and presented it first for General Motors. W.Edwards Deming's program was finally adopted by Chrysler, and Ford. Chrysler went on a program of innovation, and quality control. Ford went on a program of quality control. GM just watched. And while GM fortunes faded, and Ford held its own, Chrysler, with its new thinking, blossomed. And the auto industry has seen some of the most innovative designs and manufacture in decades.

Chrysler is still making bold choices. And though GM has finally wised up, and made a big splash with Saturn, and Ford is strong again, it's Chrysler that's making all the noise.

But typical of the industry, all three are falling into complacency again. GM is trying to reign in Saturn, instead of learning from its gentle tutelage, and Ford is turning out one aeroblob after another. Even Chrysler is becoming more conservative, though it's innovations are still trend setting.
The industry is becoming ripe again for another innovator. The public is currently resigned to the choices that are decided for it, but in the era of mass customization, it is only a matter of time before the industry changes its way of doing business, or fades to someone who does.

So it's becoming with radio. Radio is doing what's good for radio. And in its arrogance, is showing the same kind of thinly disguised contempt for its listeners that GM did. It's doing well now, and doesn't see anything on the horizon that will affect that. But like GM in the 70s and 80s, the assault doesnt' come directly, it comes in concert with circumstance. And as long as radio thinks it's position is secure, it will not see the sea change coming. Or recognize it when it's here.

I"ve put the bulk of my life into radio. And it pains me to see the industry taking the same arrogant stand that some of the stations I've helped build take, just before they fell from the pinnacle of market success to obscurity.

Radio is doing what's good for radio. Using research to determine what that is. While dismissing innovation and experimentation. David cited the record of P & G--50% of its new products fail, because despite the hugely developed and experienced research department, reading the market is a crap shoot. What radio needs is innovation and experimentation.
But you see, as David pointed out, the costs are too great. The risks can't be justified. So radio doesn't innovate, doesn't experiment, and does what's good for radio.

Before there is a fall, before there is a sea change, before there is something new to take its listeners away, radio needs to rekindle the loyalty, rekindle the spark, and begin the creative process again, the innovation, that will push radio from the realm of defense and protectionism, into offense and active growth.

The complaints are nothing new, James. But the arrogance is.
And it is the arrogance, the belief that the future is ensured, that will be the torpedo. Because when the impetus comes for listeners to abandon radio, they'll show exactly as much loyalty to radio, as radio has shown to them.

Thanks. Yeah, me, I'm a video game programmer, and a bit of a ham radio
geek -- and kind of a lapsed EE. Still, I think anybody whose
played around, even with ham radio, I think knows that
if the LPFM folk win, their format just isn't going to be that
practical. And, simply because you have a weak signal, near
in frequency to big powerful signals. LPFM has relatively low
power, into a very wide band signal. And, you have listeners
with non-directional antennas and crumby receivers. You got
maybe two or thee spots for the entire SF bay area? This dog
don't hunt, imo.

But, with a band, that is with narrow band FM, or AM, and
only filled with other low power stations, even just that
10 watts ERP is going to sound a lot better. My only reason
for thinking AM, was a vague recollection that under low
S/N sitiuations that AM was better than FM, though this
could be wrong -- and just a personal superstition that
main problem of low power broadcasting is going to be that
listeners can't hear the station because of poor
antennas, more than that the frequency response of the

audio. I agree that AM would be kind of a mess
if you were listening from a location between two stations
on the same channel. With FM, you probably could
squeeze them in closer together and let the signals
fight each other. So, that is a valid point.

Maybe they'd just mandate that new radios would
cover the new band. I assume people would go to Radio
Shack and buy a radio. With a lo-tech system
like AM or NBFM radios will be cheap. What I figure
is that, say, if 50 stations in my neighborhood
were broadcasting on this band, odds are, that
you'd know somebody with one of these stations.
That is, if your church broadcasts, you'd get
a radio to hear your preacher. If your high school
had a station, maybe you'd want to listen to your
buddies goofing off on the mike.

Yes, there's a 'critical mass' issue here. And,
yes it'd take some time for the radios to get
out in the market. But, I think in the end,
the potential is much greater, since the number
of stations could be much larger, and if the
format was engineered to work well at low power
in the first place, the stations would sound
better, and more people would really listen.

It is interesting to note that the 'initial rush' of Senate cosponsors has stalled, with only a relative handful getting added over the past couple of weeks. However, it's more than halfway to a simple majority.

Then, there's the 20 or so cosponsors of HR 3439 that did NOT vote on the bill. If everyone who voted on it now votes on it then, and you throw in the 'reserves,' then you're talking override with some votes to spare.

The Senate will be where this battle is won or lost. There are several other active fronts, of course, in this war.

Well, it's already been done, not in reality, but in the pilot
episode of "WKRP In Cincinnati"-- remember when Johnny drags the needle
across the record of the Hallelujah Tabernacle Choir singing "You're
Having My Baby" and officially changes the format of 'KRP
from "Soothing Sounds for Senior Citizens" to rock and roll?

> Which may also remind you of Ted Nugent's plan in the late 70's /
early
> 80's to purchase Muzak just so he could shut it down!

Interesting, because the first rock song Johnny played in the WKRP
pilot was originally "Queen of the Forest" by Ted Nugent! Wonder if it
was meant as a deliberate reference to Nugent's "plan."

Johnny Fever: What do you think of Ted Nugent?
Bailey: Nugent? I think his music is loud and repetitive and his
stage manner is pretentious, rude and obnoxious.
Johnny: Fair enough. [He throws away a Ted Nugent record.]

The FAA was proposing to make GPS and its WAAS and other augmentation systems replace to earth-based radio aids to navigation. These presently occupy the few MHz starting right above the FM band at 108 MHz. Unfortunately the FAA is getting cold feet in terms of a 100% space-based system, so they may not give up the 108 MHz region as fast, or ever.

If I had my 'druthers, any extension of the FM band above 108 MHz would be partly used to undo some of the mistakes of 80-90 and the too-close spaced grandfatherings that took place in the 1960s.

The "other half" would be the "toy broadcasting service" as suggested by Don. It would have to be based on un-modifiable type-accepted transmitters, and essentially no other rules, in order to avoid being an administrative and enforcement nightmare. No rules = no enforcement ;-)

My first radio jobs - WRIN, Rensselaer, IN and later WVTL, Monticello, IN - each station had only ONE cart machine in the WHOLE place. Play 5 carts and recue em all while the music played. Double Spot and talk between each one!

Record new ad copy added today in audition while the station ran in program. Oy what a juggler I became!

>tone
>on the cart comes up, right?

No, I never used that function on a live board.

Actually, I was always in the habit of keeping EVERYTHING that wasn't actually on the air potted down. That way, "surprises" didn't air inadvertently. If the stop tones weren't 100 percent reliable, neither were the secondaries.

And the guy behind the mic wasn't 100 percent dependable, either. The "pots down" rule kept me from sounding like a complete idiot (well, at least DURING the songs <g>.)

A couple of years ago, I heard one of the jocks on the Stardust format talk almost completely through a song while on the phone with a caller. You only heard the jock's side of the conversation which concerned one of the artists played and what CD the song was on, etc. Bet he was red-faced when he realized his faux pas.

Perhaps the "on the air" bulb had just burned out...

With NBFM and a modulation index of roughly 1, FM and AM have about the same noise performance. FM has the real advantage of not depending on AGC to take care of as much signal strength flutter with airplanes or when mobile.

NBFM has hardly any capture effect. As mentioned above, NBFM and AM would work about the same and have the same audio response. There were experimental VHF AM broadcast stations before the first FM stations, but **WIDEBAND** FM with its FM-improvement was lower noise and won out. NBFM has very little of that "FM" S/N improvement. I'd guess that with today's chip technology NBFM receivers might be cheaper / simpler than AM.

According to the march 28th addition of the Tennessean, Dick Broadcasting has put 103.3 WKDf aka Music city 103 and WGFX 104.5 aka 104 the core classic hits from the 70's on the market. The article said that Dick broadcasting was selling all of their holdings in Knoxville TN and Birmingham AL. They are going to keep 2 stations in NC. With AMFM possibly selling their 5 stations in Nashville I wonder who will buy WKDF and WGFX? I'm sure if Dickie Brothers owners of 92.1 WQQK 97.1 WRQQ and 106.7 WNPL buy them, they will probably do a better job than DBC did with them no matter what format they put on them.

DAVID MARK wrote:

>I would
>almost smack board ops' hands for starting turntables with the
>pots up.

The first commercial station that I worked for had an old Gates board and Gates turntables. The remote starts for the turntables were wired so that they'd start when you turned the rotary pot up out of the cue position. The board keys were always "on."

I always liked that arrangement. You'd never hear the Rumblemaster 5000XR turntable "wow" at startup, plus you could start the turntable and pot it up to the proper level all with just one move of one hand, thereby freeing the other hand to pot up the mic for all of us "pots down" types (or to kill the flying ants that would invade annually. Actually, the *turntable* killed one of them once when the ant decided to land on "Lay Down Sally." Not a pretty sight... or sound.)

The same arrangement could be made with a slider pot, but I always found it too easy to overshoot the startup level. Besides, the rotary pots helped keep the wrists pumped! And think of how strong our neck muscles were back in the days of trying to read label credits while the record was playing. Anyone sorry that we missed the 78 RPM era?

I was never much of a fan of slip-cueing, since that spinning felt was like spinning sandpaper to the underside of the LP.

I dug through some 30-year-plus old airchecks recently. 'Twas quite a surprise to hear the thumpa-thump of records being plopped down and cued on the neighboring turntables. It was *really* obvious. The turntables just weren't well-isolated from each other back in those early FM stereo days. I hadn't heard that distinctive kind of sound in decades.

>

The dynamic range would be less with NBFM as the bandwidth is varied
with variations in amplitude. As I remember from an earlier life as an
engineer, the rate of frequency swing is determined by the frequency
response. In other words, a real high pitched sound would modulate the
signal at a faster rate, not increase the bandwidth.

Of course with all of the compression that today's stations are putting
on their signals, dynamic range is pretty much a thing of the past
anyway.

>I have no experience with Minidiscs as cart replacements, so I can't speak
for
>those.

>Rob Andrews

If mini discs had come out first... we wouldn't even know about CD's.
Minidiscs are wonderful and very flexible. You can re-record as much as you
want and you can add to and delete from a disc. Almost all machines let you
dub digitally too.

As for carts....GOD I HATE THOSE THINGS! As a production director, carts are
the biggest waste of time on earth and then they sound like crap anyway.
They served a purpose in their time... it was better than playing 45's and
mini-reels for commercials.

The best system is a hard drive system with automatic backup and redundant
servers like the Scots system. And their voice tracking system is so far
ahead of the rest it isn't even funny. I didn't like our Scots system at
first... til I learned to use it correctly.

Those that like carts are probably the same ones that like phone lines for
network and ballgame feeds. Or the ones that like to hear the static on AM
during a storm.

very flexible and near CD quality...and far harder to notice the loss
then CD....I use mine for field recording SFX to use on spots
occasionally...but mainly i'm a foley wannabe who doesn't do too
bad....let's see i've fallin down off a chair for a few spots, played
with tape measures....scraped ice....sounds surprisingly good.

>

that's a matter of opinion...and how you use them....personally, i'd
rather have a cart then cue up the wrong track on a minidisc....of
course, if the tape is shot to crap, yeah....MD wins out, but let's be
practical....some stations won't invest in MD's. The one I work as a
production assistant won't....still have a lot of carts....so they use
them for ongoing contest elements on occasion, but everything else is
off the computer. I like them myself because of nostalgia....but then
again, I have worked with every major professional broadcast format,
personally or professionally, of the last 60 years, so they all have
their good points and bad points...and I don''t have time to transfer
one to another.

>The best system is a hard drive system with automatic backup and redundant
>servers like the Scots system. And their voice tracking system is so far
>ahead of the rest it isn't even funny. I didn't like our Scots system at
>first... til I learned to use it correctly.

scott is nice...one of the best out there...I work on it myself....but
one of the main disadvantages is that it is event driven. great if you
are producing a 32 sec spot on something that doesn't time shrink well
(creamware's Triple DAT is great for shrinkage, and without a doubt
THE best multitrack software for radio production) but jocks have to
watch their time checks in voicetracking hours...it's not hard to be
that off when a board op is turning the thing on and off for a live
remote. been there, done that....

>Those that like carts are probably the same ones that like phone lines for
>network and ballgame feeds. Or the ones that like to hear the static on AM
>during a storm.

nah......time the FM signal is compressed to crap anyways, most listeners won't nice that much of a difference.....especially on AM...if of course it's carted right..with new tape.....at least until you yanks settle on some digital standard.

Uh...what's this I hear about production directors in the US actually having to write spots???? UGH!!! that's scary.....

Time to make some more enemies...

Personally, I think we should petition the FCC for a return to (at most) a
"one to a market" type situation, a reinstatement of the "3 year" rule
and...
I'd like to see the NAB reaction to this idea. (Anyone still selling bomb
shelters? I may need one... I've seen some "NAB members" who'd do just
exactly this sort of thing. The last one I worked with actually plans to
apply for every LPFM frequency in his market - by bankrolling the expenses
of his employees filing - as a means of making sure that "no one else"
manages to obtain a license... Sounds ethical and "politically correct"
enough to hold FIVE full-power licenses in that market, huh?)

You've GOT to be kidding! A feature this advanced in the smaller markets
of days gone by! I've worked in stations (they didn't stay this way for
long) where, ALL cart machines were paralelled across ONE input...

I used to complain to management at WKRG-FM in Mobile, Alabama, about this
very fact. The PD couldn't hear them, non of the jocks could hear them,
management couldn't hear them... And they would all sit and wonder how I
could tell them when the song had EXACTLY 30 seconds of audio left! (They
had a system: start flashing the "stop" button on the ITC's - the tertiary
tone - evry 10 seconds from 60 seconds befor the end of audio until 30.
Then, they'd flash it rapidly from 30 to 20 and, finally, at 10 seconds -
just as the audio fades down enough to make it REALLY noticeable - HOLD THAT
BUTTON DOWN!)
Common sense and too many loud monitors at work!

I remember one time I was on the air at a station where they had one of those large tall wire rotating cart racks right behind the jock. The trick was to reach back and try to grab a cart while talking. I reached for a cart that was way up on the rack and managed to tip the whole thing over with the mike open. I didn't think those carts would ever stop falling.

Some stations prefer the reliability and redundancy of CD players. When the computer goes down, you usually don't have a backup. With CD players, you can have an extra player (about $1400) available easily. Some purists object to the slight and supposed coloring of audio that may come when computer systems use some form of compression.

>Their Music
> typically comes on "HitDiscs" From TM Cenutry which distrubtes the RR
> Backpages hits each week.

Larger markets get new releases from record companies. And ususally faster than the HitDisk product. And, there are a number of companies like TM doing weekly "breakers" CDs for stations. RadioPlay from Radio Express is one of them, and there are others.

>Now days all the music is typically stored in
> computers, but as I stated, some still use CD's... usually would have 2
> or 3 CD Players in studio and go between those players.

And, probably a backup machine in engineering. Most stations I've seen these days that do use CDs have 3 machines to avoid the mad race to the studios at 1 AM by the engineer to fix the "other"machine in a 2-player operation. Hard to do segues with only one!

Sorry to burst your bubble Gregg, but that ain't necessarily true. I HATE POTS phone feed remotes! Digital Codec however works wonders. EQ'd lines are OK too, as is microwave.

The static on the AM band during storms is annoying to me, because it wipes out the programming to the point that I can't hear it.

I Like carts, yes... But I also like hard drive audio systems as well. I just have more of a passion to carts, that's all.

It varies from station to station. A select few still put all their music on carts. Other choices include CD's or music on hard drive.

Stations that use CD's can use everything from single CD players where the jocks load all the songs, to computer controlled CD Jukeboxes such as On Air Digital's "UDS-II".

I work for KEOM-FM ijn Mesquite, TX and we use the UDS-II. It consists of two 360 disc Jukeboxes, with two laser heads per box.

The computer is loaded with the day's schedule and it tells the machines which discs to cue. This kind of technology is just beginning to gain popularity for home-base automation for consumer use. I'm running such a system in my own apartment, using three Pioneer 300 disc changers.

hard-drive based systems are gaining more popularity in radio, and they do save a lot of studio space. Alternativly, stations could put music on Minidiscs.

A couple of stations I worked at had a felt-covered aluminum platter
that fit over the Turntable. That way when you "slip-cued", the
turntable would spin under the platter and the record didn't get
scraped. Of course, it took a bit longer to start -- and you needed a
fairly high torque motor to keep the turntable spinning with all the
extra weight.
I actually favored the quick-start turntables. Can't remember the
brand names, but once you used them a couple of times they started
reliably. I can't remember if I started them with the pot open, but
since I worked mostly AM, I doubt if the on-air sound of the turntable
starting was very distinct.

Weren't the tones on a separate track from the audio? I remember
complaining about hearing tones at WMRN in Marion, OH. Our chief
re-aligned the heads and it was gone. (He might have also had a notch
filter that dampened them)

Good point. The cue tones are on a second (or third, for stereo-recorded carts) track, but for stereo, they're really close together, and if the head gets misaligned over time, it could lead to some problems...

> (it seems that somewhere along the line they decided that they were
> modern-rock).

I don't think that this type of change is a reflection on any explicit
decision on the part of the station to change its format or any such
thing. Why I don't think so is primarily for two reasons.

1. Within the alternative and/or modern-rock genres, the 1990s
produced vastly different styles of music than the 70s and 80s
did. Not a lot of grunge bands from the 80s. Not a lot of new
wave or european dance bands from the 90s. And there are styles
like punk that were different in the 70s and 80s than they are
today. That is, if you call Green Day or Blink-182 punk, which is
a stretch for some people. :)

2. It's not like the station isn't playing playing 80s alternative
music either. I listen to them on a regular basis PRECISELY
BECAUSE they play a decent mix of classic alternative songs and
modern rock. So sad there are few that do.

Of course, I don't work for WWCD so I can't speak for them.

Darren

P.S. You can also listen to WOXY on the Internet at <URL:http://
www.woxy.com/>, incase. Good station if you're into an eclectic
mix.

I too was always taught to keep everything potted down that wasn't currently on air. I forgot once...the one time I accidentally keyed my mike with the telephone cord! Our phone was on a cabinet directly above our board. I wheeled back in the chair to grab some carts and bam! It happened. I was working 7-12mid on the top station in our market, and I was in college. I was talking to my boyfriend on the phone (a station no-no). I finally answered another line to have a kind listener inform me that I had been on the air over the last song! I was horrified, and tried to reconstruct the conversation in my mind. I had talked about my algebra class (I'm not a math Einstein) , and how I hadn't scored above a 47 all semester, and how my professor sucked! The entire listening audience (I had a 61 share- it was a small but measured market), learned that I was a moron! After that, I double checked everything on the board, particularly the mike!

1847. Stupid cart tricks

Newsgroup: rec.radio.broadcasting
Date: 2000-04-20 00:00:00 UTC
From: Max Cacas <MCacas@freedomforum.org>
Message-ID: <9BA8EA456304D311BD800008C7918566BCD5AE@mailsrv.FREEDOMFORUM.ORG>
Source record: 19849

Reading all the stories about carts (and I'm in the majority here who don't miss them)
made me remember two of my favorite cart stories...

- At one radio station, it was possible, with the old Spotmaster cart machines (big gray base,
silver front, with a big VU meter for the record machines, and a big pot on the playback machines, and also a thick aluminum base deck on which the carts rested), it was possible to record secondary and tertiary tones *after* the fact without compromising the audio already dubbed onto the tape. So...a couple of wise-acres at this station took the morning man's carts and dumped in a whole bunch of secondary and tertiary tones on his carts...fortunately, we didn't have any mechanical relays slaved to these tones, so it didn't start anything and compromise the air signal...but when he got off the air, he was one mighty irritated guy, seeing all these lights going off all morning long, and not being able to do much about it!

- My first job out of college was working for a small, automated station in Pennsylvania that ran Drake's old "Contempo 300" A/C format. As described by someone else, this station had the "deep" Drake voice who did song intros, station IDS, and other "formatics" do the time, minute by minute, on two of those big plate-sized carts. And god-forbid the power went out for a substantial amount of time...someone would have to sit there, and get the time carts re-cued, by holding the play button down on the ITC machines that they ran upon. Also, thanks to carts, I got to "break" music format on this station not once, but twice on my last day. Coming out of my final, farewell newscast, I had dubbed Steam's "Na na hey hey kiss him goodbye" onto a cart labeled with a promo. Then, that evening, as I drove out of town on my way back to D.C. and my next job, at the appointed time, that same cart played one of my favorite songs of the time, "Layla" by Eric Clapton and the boys coming out of a stopset.
They tell me those two songs made it back on the air a couple of more times over the next few days before someone either figured out what happened, or the "promo" carts reached their "pull" date and they were taken out of circulation...

Hey, gang...you can't have quality fun like that with a hard drive...or can you? <g>

Cheers,
- Max

(And other interesting comments deleted)

So, I guess the concensus on this is that basically, it
wouldn't make a huge difference either way, AM or NBFM, but
that NBFM would have a slight edge on some secondary issues?
That is specifically that with AM, the AGC gets confused while
your listening from a car.

LA Times almost always has a radio column in the Thursday
"Calendar" section. I think LA Daily News has an occasional
(much less frequent) radio column in its "LA Life" section.

So, I'd say, LA Times.

Also, check out the "Rave" entertainment section in the
Daily Breeze (Torrance paper). That also has a weekly radio
column (written by a Mr. Wagner or Waggoner, I think) that
is interesting.

Actually, all cart recorders with secondary and tertiary cue tone capabilities could add the tones after the cart was recorded. All you had to do was tap the tone switches while the cart played.

What most people didn't know about those old Spotmasters (the ones with the "clutch" on the right side of the deck that would bring the pinch roller up to the cart), however, was that it was possible to record on them and not lay down a stop cue tone without having to open the head cover to disconnect the stop cue head. All you had to do was hit the start switch (in the record mode) very quickly and the deck would roll and record without recording the stop cue. Kind of a fast, cheap, down and dirty editing system.

1852. Re: Turntable Daze (was Cart Machines & Memories)

Newsgroup: rec.radio.broadcasting
Date: 2000-04-21 00:00:00 UTC
From: DAVID MARK <verbiage_spewificator@juno.com>
Message-ID: <20000421.114450.-443079.1.verbiage_spewificator@juno.com>
Source record: 19708

From Paul Van House

----> A couple of stations I worked at had a felt-covered aluminum
platter
that fit over the Turntable. That way when you "slip-cued", the
turntable would spin under the platter and the record didn't get
scraped. Of course, it took a bit longer to start -- and you needed a
fairly high torque motor to keep the turntable spinning with all the
extra weight.<----

That basically defeated the purpose of slip-cueing, didn't it? The idea behind slip-cueing was to get a tight start on the turntable. Of course, after using a turntable a few times, one got a feel for how long it took to reach speed and didn't really need to slip-cue.

----> I actually favored the quick-start turntables. Can't remember
the
brand names, but once you used them a couple of times they started
reliably. I can't remember if I started them with the pot open, but
since I worked mostly AM, I doubt if the on-air sound of the turntable
starting was very distinct.<----

Brand names like QRK, Sparta, then the others, like Gates/Harris started making them. As for the comment that on AM the turntable startup noise wasn't distinct...as I said in an earlier post, it wasn't distinct on car radios and crappy little transistor portables, but everyone listening on home stereo systems (yes, people listened to AM radio on home stereo receivers) heard the noise, and one listener hearing a technical operation is one too many, especially a technical noise that was so easily avoidable (IMHO).

Nope - I hate to disagree with the ego of "a sound investment" (a bit much repeated on this group a hundred times already) but these were two different BRAND NAMES.

Tapecaster was a cheaper brand than Spotmaster - but close to the same design. I'm certain that Spotmaster was manufactured in Bloomington, IL - and that Tapecaster came from Washington State. I used Spotmasters but only saw Tapecasters around various stations - never used them.

Don't all recording decks allow you to defeat the primary tone? I know
that with Omegas (I know this is fast-forwarding a bit), you could just
press the Record button twice, the red light would blink, and it wouldn't
record the tone. You could do some really crude editing this way, if
in a pinch...

Eric

That's what I was thinking...It sounded like a Tapecaster.
Ray Dennis mentioned the big steel swiveling cart racks... I used to be able to spin in my chair, grab a cart, slam it in the Spotmaster, cock the lever and hit the play button and never miss a word.
Now I have DAD Pro playing everything and when someone walks into the control room to talk, I manage to screw something up. Either Alzheimer's is settin' in or the 70's were way too good...

My other message does not seem to have made it through...

Tapecasters, originally made in Rockville by Paul Something-or-other, were separate from Spotmasters. Different manufacturer entirely. Even the colors were different, and they were slightly cheaper. I used to buy one or two every trip to Miami and lug them in my baggage to Ecuador in the 60's... must have had 50 of the critters. Black case, anodized faceplate with the big pot on the front.

Like Spotmasters, Tapecasters used the Viking deck with the engage lever that pulled the pinch roller close to the capstan, held off until start by a goofy little wire spring on the solenoid contactor plate.

During the 1994 Northridge quake, KKHJ (now KHJ) was in the middle of a break when the quake hit... so the mike was open. You could hear the 4 giant wire racks shaking, hitting each other and finally falling down. The on-air guy, V&#65533;ctor Camacho, was too shaken to soy much, although on one particularly hard jolt, he could be heard saying, "Oh, Shit." Then one of the cart racks toppled.

> Personally, I think we should petition the FCC for a return to (at most) a
>"one to a market" type situation, a reinstatement of the "3 year" rule
>and...

You've hit the heart of the matter. LPFM was meant to be a sop to the large and growing number of people who were convinced that the creation of oligopolies in radio, had drowned out both quality local programming and local voices and perspectives.
Of course, even if the service does see the light of day, it will be so technically crippled that it's hard to see how more than a handful of stations in college towns far from large markets will be at all viable.

>The last one I worked with actually plans to
>apply for every LPFM frequency in his market - by bankrolling the expenses
>of his employees filing - as a means of making sure that "no one else"
>manages to obtain a license...

If he's ever caught he's in such bigtime violation of the rules he'd get his full service licenses yanked. But that's not likely to happen simply because there's so little enforcement of the proposed LPFM rules, and so many loopholes, we'll see stunts like that---and we'll also see local organizations serving as fronts for further proliferation of what amounts to translators for national religious station networks.
And the real problem of media concentration and poor local service, which is driving listeners away from radio in droves if Arbitron is right, will remain unaddressed. At least until the next recession shakes the industry and forces heavily leveraged conglomerates to divest...

you must've loved the thump of the older cart machines when you
started them...I still hear a click often when news readers fire a
cart for a actual.....

easily avoidable is a matter of opinion and depending on the
situation. I cannot see a jock hit the start switch and pot up the pot
to a acceptable level in a 1/2 sec. all the boards I have ever worked
on always had the pot live and the start switches totally separate
from the pot....the ward beck's had a on off, but that was only for
the channel, not for starting the machines. it's not impossible, i've
done it for carting noisey vinyl, or to elminate the start wow off a
quick starting music reel, but it can be tricky, and it's just easier
to keep the pot up.

> ---->Wasn't that the Tapecaster?<----
>
> Spotmaster was the brand, Tapecaster was a particular model.

Wrong. Tapecaster was a separate brand. The started in Rockville, MD, and
then moved somewhere like Tennessee. The owner was Paul Something-or-other,
and I watched many a unit going through final assembly. Spotmasters were
mostly gray, if I recall (there was even a big aluminum brushed front panel
rack mount version) and Tapecasters were black with an anodized front plate
under the big pot. Like the early Spotmasters, the Tapecasters used the
Viking decks with the lever... so the mechanical part was essentially the
same on both.

I used to buy two on each trip to Miami from a local distributor and stick
them in my bags for the trip back to Ecuador... along with pinch rollers,
the little springs that kept the solenoid contactor plate form fully
engaging the pinch roller, discreet devises (otherwise known as transistors)
and other such stuff. I must have had 50 of the critters, including a couple
that were always in the shop being fixed or ready for replacement of ones
that got whacked.

I need two Vacuum Capacitors...one of about 200 - 250 PF,
10 KV or higher, the other of 500 PF, 10 KV or higher.
This could be a fixed or variable capacitor.
Please e-mail me if you have one available.
Thanks a lot, Don Davis

From Eric...

---->Don't all recording decks allow you to defeat the primary tone? I know
that with Omegas (I know this is fast-forwarding a bit), you could just
press the Record button twice, the red light would blink, and it wouldn't
record the tone. You could do some really crude editing this way, if
in a pinch...<----

Right, but the Spotmaster was not designed to do that. It was a benefit
of the cheap switches they used. The recommended way to defeat the stop
cue was to flip open the head cover and unplug the wire that went to the
cue head.

>in a pinch...<----

in a nutshell...NOPE!!! the older ITC's I have seen never had the 1khz
cue defeat....though one deck I saw had been modified to have a defeat
on the front panel. my own audicord E26 doesn't have a cue defeat on
the front panel, you have to slide out the recording module, and
inside there's a defeat switch. some ITC's were also this way. we had
a couple omegas in our newsroom and that's how they would put 'man on
the street" montage actuals together....crude, but works.

the only other decks I have come across with the front cue defeat is
the fidelipac CTR 10's in fact, the machines I worked with you had to
be careful you didn't hit the record button twice, as that would
trigger the defeat.

KKHJ was always in Spanish.

The expletive was said just as I quoted it. Interestingly, no logging tape or device was running. A few days later, a homeless person came to the station with a tape he had been making of our music (doesn't everyone tape at 4:30 AM?) which had the quake "broadcast" on it as well as the first half-hour of quake coverage. He had been living under a bridge in Santa Ana and sold me the tape for $20!

Source record: 19726

I had incorrectly asserted, in response to Peter Maus' thoughts on declining listener loyalty, that

>> "I have probably been doing research in radio for longer than you have been =in= radio."

without realizing that Peter is obviously an old fart like me, <s> as he notes:

> "To begin, I started in radio when I was 6. That would be 44 years."

Bzzzt. I'm wrong. I'm also impressed at that timespan. I didn't even =tour= my first station until age 7. (I was 7, that is; the station itself was much older.)

> "But to address your point, you're right, there is nothing new in these complaints."

Thank you. That was in fact my point. The sense of "my radio station" is common to young, new listeners. Some listeners take that forward through time, whether with the same station or with one or more others. Some lose it over time, whether with changes in stations or, more commonly, with changes in themselves.

Excellent! My compliments to the chef, er to the owner and/or
manager who had the foresight to do things that way.

> "[For others,] supporting preconceived notions was the bulk of
the reason for doing research."

Yes, it's a pity that research is so poorly used by so many. Then
again, so is marketing, too often, wouldn't you agree? Smart
marketing can establish a brand. Dumb marketing may never get
past the level of, "Hey, it's the spring book. What are we going
to give away?"

coming. Or recognize it when it's here."

I cannot disagree with anything in that paragraph =except= that
you are tarring everyone with the same brush. I would
respectfully suggest that you are correctly describing some but
not all.

I do not know whether you are unhappily employed or are
disappointingly unemployed. But if in fact you are looking ahead
for your next position in radio, now or at any point in the
future, my suggestion would be to "hire your employer" carefully,
if you can. There are of course broadcasters who fit every
negative description you have offered.

I still use one every week. The Sunday morning community affairs show I do weekly has a news segment in the middle which runs about 8 to 10 minutes. When I was in college (2 years ago), I found a box of these 10.5 minute carts. I got a few "unstuck" and permanently borrowed it for the show. Several of the station's 6.5 and 7.5 minute carts have unraveled, but not this one. They're Fideleipacs with a grey shell. Interestingly enough, its Pat Parson's newscast which goes on those carts.

Come down to Bridgewater! Its an interesting situation. The station had passed through a couple formats and was finally bought out last March. In May, it became a simoulcast of WMTR, Morristown and everyone was let go -- except me. My Sunday morning show stayed from the trailer in Bridgewater with whatever equipment was still functional (none digital). All other programming was simoulcast from Morristown. All of our IDs, actualities, interviews, news, etc. is on carts for that hour. As an added bonus, a couple weeks ago, we had an AC spike in our lines. It fried the remote unit which turns the station on and off, and also killed one of our cart decks. Now we're down to 2 cart decks, 2 mikes, and 2 CD players to do the show. Its a sight to see.

BTW, thanks for all these old-time cart stories. I'm only 23, but this is interesting. When WMTR bought out the Bridgewater station, I was hired as a board-op up there. Until this past December (and I only started there in July), we had two enormous "carousel" cart machines which I'm told were used for overnight automation before Audiovault. They looked like pieces of history. Actually, the whole studio looked like a piece of history -- including the board with the big, round knobs. They just finished renovating our studio. I wonder how many people it took to haul those units away.

Frank Forte

I don't remember the brand name of the single cart
record/play deck at WCSM AM/FM, Celina, OH, but you
really could do crude but very tight-sounding edits.
We'd do the airchecks we'd send out that way. To do a
bunch of reel to reel dubs, we'd run a large reel, and
anchor something to the start button, and then, chop
chop.
I remember a portable cart machine that the
salespeople would take with them to play spec's for
clients. A long time since I've seen one of them!

Spanish language TV freaks in Phoenix, and people running broadcasting information pages, take note: KDRX in Phoenix (Telemundo) has moved down from Channel 64 to Channel 48. They are still low power, but they seemed to move their tower or change their pattern, because I used to have to move my antenna to a different position to watch their station,as opposed to the other channels, and now I get their signal using the same aerial setup as I use for other channels. Just wanted to let you know.

1884. Radio Caroline's 36th birthday was a great success on the internet

Newsgroup: rec.radio.broadcasting
Date: 2000-04-25 00:00:00 UTC
From: Mike Terry <michael.terry1@virgin.net>
Message-ID: <8e51pe$4vm$1@uranium.btinternet.com>
Source record: 19740

I first listened in 1964 - there is a big future for Radio Caroline 36 years later!!

Mike Terry

Hi there, dear Caroline fans,
Thank you all very much for you response on the Caroline celebration-broadcast on the Internet last Easter-weekend. We are very impressed by the number of people (over 1200!!) that listened to Radio Caroline on the Internet. We think this is a tremendous result, you made us all very happy!!. Although the Internet-service was only ment for the Easter-weekend we now are seriously considering to continue this service, due to the success and the many positive reactions we received. So, there is a posibillity that you can listen to your favourite radio-station on the Internet next weekend. Watch our website for more information on this matter.

We would also like to express our gratitude to those of you that have become a member of the support group during the weekend. Welcome to the club!! Thanks to your contribution we may be able to extend our broadcasting hours and keep the dream alive.

Please notice that you can also listen to Radio Caroline on the Internet throughout the week. From monday morning till friday evening we broadcast some programs that were previously transmitted on the satellite. There is over 7 hours of programs there...so enjoy listening. More programs will be added in the near future.

If you like our broadcasts, and would like to support us, why not join the Caroline Support Group! You can enlist on our website (www.radio-caroline.nl), which is in Dutch only!, or on the official Caroline Website (www.radiocaroline.co.uk), which is in English Your contribution may make it possible to increase our broadcasting-hours and perhaps become a 7x24 hours radio station again.

Once again, thanks for listening, thanks for your E-mails, thanks for signing our guestbook, thanks for your support!!!.

One of our jingles says:
Radio Caroline is back, go tell a friend.

Please DO !!!

With kind regards,
Adrian Hondema
Webmaster 'Radio Caroline Support Group Netherlands' website.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through
Friday. This is because Pacifica will not allow us to broadcast the
Pacifica Network News over Realaudio.

1886. Re: Mexican ISDN lines

Newsgroup: rec.radio.broadcasting
Date: 2000-04-25 00:00:00 UTC
From: Robert Combs - Savannah <robert.combs@cumulusb.com>
Message-ID: <8e5p01$7o$1@news3.infoave.net>
Source record: 19742

Hopefully this is not too late, but be careful with the lines in Mexico. The phone company there has a tendency to cut the line off after 30 minutes of use. A talk network I used to work for did a show there and in the middle of an interview, the line went dead. It took us 20 minutes to get connected again. It took 10 minutes to find an English speaking operator to find out what happened in the first place.

Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

Hello Again,

And a very happy Easter season to all of you out there! We are proud
to announce that show #160 is now out there and ready to be heard. It is
a mix of listener requests, -- The Roy Hall version of
whole lot of shakin' goin on, and featuring a new group out of Australia
called the "Flatfoot Shakers" And they sound pretty great!
Here is the playlist to show #160. And of course the story of Annie is
also told in 5 songs! also by request here on the Rock-it.

1. Sugartime-- Johnny Cash 1955
2. My Little Baby's (Boppin tonight)-- Flatfoot shakers 2000
3. Ling Ting Tong -- The 5 Keys 1955
4. Come to Paradise -- The Fascinators 1959
5. La La (Version #2) -- Fats Domino 1958
6. Annie been working the Midnight Shift -- Buddy Holly 1957
7. Annie met Henry -- The Cadets 1955
8. Work with me Annie -- Hank Ballard & Midnighters 1955
9. Annie Had a baby -- Hank Ballard & Midnighters 1955
10. Annie's Answer -- The El Dorados 1956
11. Whole lot of Shakin' goin on -- Roy Hall 1955
12. Rock a beatin boogie -- Bill Haley & Comets 1955
13. Let's make like a rock and roll -- Don Woody 1957
14. 30 days -- Chuck Berry 1955
15. Giddy up and Ding Dong -- The Continentals 1956
16. My Sweet Baby -- Jack Baymoore & the Bandits 1999
17. Baby let me bang your box -- The Toppers 1954
18. Wear my ring around your neck -- Elvis Presley 1958
19. I'm sorry I'm not sorry -- Carl Perkins 1957
20. Love's Prayer -- The Spinners 1958

To listen to show #160 just go to our archives website at:
http://www.palmsradio.com/rockittext.htm and then click to
show #160.
~~~~~~

We have also updated our playlist page it was about 3 shows behind. But it
was updated and if you are wondering what songs are playing
on which Rock-it shows and who the artist was you can click to:
http://www.palmsradio.com/playlistmain.html
and click to the show you would like to check out.
~~~~~~

And if you want to listen to oh about 8000 other radio stations that
are broadcasting over the internet -- don't forget our radio links page

that lists several online radio directories that list stations
from around the world you can tune in on with just your PC!
the radio links page of Rock-it Radio is:
http://www.palmsradio.com/radiolinks.html
~~~~~~

Don't forget we love to receive those requests and dedications and will do
our best to fill them on the next rock-it show!
Just e mail your request at: Rockitradio@earthlink.net
~~~~~~

CONTEST! CONTEST! CONTEST! CONTEST! CONTEST! CONTEST! CONTEST! CONTEST

Ok this week's contest just be the first Rock-it Radio listener club
member to e mail us at Rockitradio@earthlink.net and tell us what
was the song title of the B Side to Jerry Lee Lewis' first Sun Record
release (Sun 259)-- The A Side was Crazy Arms -- But what song was on the
B Side?
The winner will receive a copy of the New Rockabilly CD "Drinkin' Cryin
and Moanin" By the San Francisco Area band The Haywoods.
~~~~~~

Well that's about it for this show -- hope you enjoy it and Happy Easter
everyone!

Bennie Dingo
Rock-it Radio

1889. WCSM/Was: Stupid Carts

Newsgroup: rec.radio.broadcasting
Date: 2000-04-26 00:00:00 UTC
From: brad lovett <bluvit@yahoo.com>
Message-ID: <20000426202551.8395.qmail@web119.yahoomail.com>
Source record: 19745

Paul,

When did you apply at WCSM? Always a strange little operation, but I will say in the 70s we did have some good people working there. Even if management let some strange things go on, at least you could cut a decent aircheck. WCSM alumni that I'm aware of would include Paul Ellis, WLQT, Dayton (WOWO at one time); Spark Simon, I think WZOQ, Lima; Mike Langevin, RadioResearch.com and group programmer,Ray Arthur, who went into management at some small stations (Ray, are you lurking?), Steve McCrae, great jock, Jack Messmer, who now edits the Radio Business Report, and I probably left out several. I think the sound got less professional later, especially when they were playing lots of metal on an obstensibly full service A/C format. (When I did music there, I thought "Hurts So Good" by Mellencamp was pushing the envelope!). WCSM-FM is possibly the only FM that still broadcasts in mono.Plus if you still want to hear the "You II" jingle package, its there.

The station is still there, and the FM gets in real well here in Lima, but is somewhat weak on the AM side. I wonder if they will ever just give up AM and just go FM?

Fred

1891. Request For Liners

Newsgroup: rec.radio.broadcasting
Date: 2000-04-26 00:00:00 UTC
From: Fred Vobbe <fredv@nrcdxas.org>
Message-ID: <3.0.3.32.20000426192153.006b225c@nrcdxas.org>
Source record: 19747

The National Radio Club Convention will be held over Labor Day 2000. The club is a medium wave DX club with over 800 members. The club is made up of radio DXers from all over the U.S. If you are on the radio, I can guarantee that at least one member has heard you, and some record airchecks. Many of the members of the DX Audio Service are blind. The DX Audio Service, (which has over 100 members), is the talking book magazine of the club.

At this years convention, we will have a pair of "hands on stations". The AM carrier current, and 100 mW FM station will have state of art processors and equipment so many of our members can tweak the knobs and see and hear how things work. Ever tried to explain why some stations sound loud, or soft, or over processed? The AM uses an Inovonics 235 processor, and there are 6 different receivers and Belar AMM-3A to sample the signal. The FM uses an Orban 8100 with Colbalt card. For a program source I will be using an automation system using an oldies format. The system also has a Gentner VRC2000 to demonstrate how remote controls work, and to show blind members how they can access equipment with this technology.

Since there are no jocks, I am looking for some liners to go between the songs. If you, or a close friend work at a radio or television station, I would like to get a welcome message from you for our attending members. Here is a sample of what I'm looking for, and feel free to modify the script in anyway necessary.

"Hi this is Dan Ingram from WABC in New York. Radio has been a good part of my life, and I'm sure it's been a good part of yours. I would like to welcome the membership of the National Radio Club to this year's convention, and remember, when you're in New York, it's 77 WABC!"

or

"Greetings DX'ers. This is John Brown from WAAA. I would like to welcome the membership of the National Radio Club, and the DX Audio Service, to your annual convention. No matter if you listen to AM or FM, you're listening to the magic of radio, and when you're driving through Abitron Michigan, park it on 100.1 from 3 to 6PM on WAAA."

or

"This is Pete Street from Newstalk 1020. When you are in Demographic Illinois, tune me in for your news and information each morning Newstalk 1020 is the voice of the Cubs, and we're your news source for northern Illinois. Be sure to listen for Newstalk 1020 WAAA, but in the meantime, have a great National Radio Club convention!"

You guys get the idea. Anything would be welcomed, and the more voices the better. I would be grateful if anyone knows major market talent that can cut a few too, however I will be sending out request letters in May. Again, feel free to modify the scripts in anyway you desire. If you are voice-over talent, you are welcomed as well, since many of our members will recognize your voice.

Note.... please do this with voice only as they will trail over the end of a song and talk up the beginning of another. If you want to do one with your stations jingle at the end, I can use it to go into songs opening with vocal, but still give me one with V.O. Due date for all material is July 15, 2000.

If you want to find out more about the National Radio Club, the club's web page is at http://www.nrcdxas.org. If you want to hear an aircheck of what we did last year, (all automated with liners from our members), go to http://www.nrcdxas.org/ra and then go down to the bottom of the page where it says "WNRC-1610 Airchecks (99 NRC Convention)" and download an RA file.

Any help is appreciated! A web page about liners will be developed in several days.

Fred (ex radio guy) Vobbe,
Publisher, DX Audio Service

Add WTOP-FM Warrenton/Washington. Add WCSP(FM) Washington (C-Span
radio). Also WAMU-FM (sometimes) when they play old mono records.

Can't remember exactly, but sometime around 1980. I was working at
WMRN Marion (oh) at the time. I can't remember exactly what I didn't
like about the place, but the guy who interviewed me was pretty strange.
About the same time I interviewed at a station in Grand Haven(?)
Michigan that was built inside a closed-down funeral home. It was an
am-fm combo. As I recall, the am was live and the fm was live-assist.
the am jock would actually have to run stop sets for the fm while still
running the am. Both were run through the same board -- am through the
program channel, fm through the audition channel. I ran away from that
place!
I ended up landing in Corpus Christi, Tx at KIKN (am) as production
director without ever going for an interview or seeing the facilities.
Turned out to be a good move, but if I had to work at the transmitter
studios (Sinton, Tx) I probably would have driven back to Ohio -- they
were pretty bad! The main studios were quite nice. I was there for
KIKN's last two appearances in the Arbitron top 10. The station ended up
being bought by an FM'er in town and I was made news director.

There's also that oldies FM in the Hamptons, and WBUR up here (Boston)
is all-talk, so they don't put on the stereo pilot. Then, of course,
there's Jukebox Radio in NY (WJUX 99.7 Monticello, translated to and
from Fort Lee, NJ, via a sketchy boomerang signal...

1897. WCSM/Carts/Strange Ops

Newsgroup: rec.radio.broadcasting
Date: 2000-04-27 00:00:00 UTC
From: brad lovett <bluvit@yahoo.com>
Message-ID: <20000427211650.11372.qmail@web123.yahoomail.com>
Source record: 19655

Paul, as far as I know WCSM is essentially the same.
Fred Vobbe, you mentioned WCSM's AM signal, when I was
there the AM's 500 watts got out real well in a
north-northeasterly direction and covered all but the
inner parts of Lima. They were strong in the Ottawa
and Findlay areas, and recievable up to Bowling Green.
To the Northwest they mix with WIOU, Kokomo, IN all up
and down I-69. Its a four-tower directional, within
the last year they've run separate programming on AM
finally. But the land for the four tower would make
good flood plain.

Speaking of strange operations, I worked at WMVR AM/FM
in Sidney, OH and they ran an A/C hodgepodge on AM and
slushy beautiful music on FM with big carts (speaking
of how this thread started) with no insertion system,
basically you ran your AM show and when a spot had an
asterik, you switched over and ran the spot on FM too,
taking the BM off the air in mid-song, and returning
with no ID, liner or anything in the middle of that or
another song. Mutual News, local news and legal IDs
were simulcast. Any other strange ops like this in
your memory banks?

I have a Select-A-Tenna in MINT condition. I don't really need it. What I need is an FM transmitter in the Ramsey FM-10A category so I can broadcast to a walkman in my back yard.

I would also condsider $40 plus I would split the cost of shipping (about $3 per person).

This thing is amazing with AM but only works with radios that use a ferrite bar.

Hey guys/gals..need your help..I am working with a guy who is using an ISDN line and a Telos Zephyr to connect with a network....local calls go through fine on the ISDN line, using the 10-10-222 or 10-10-288 prefix with the long distance causes the call to go through fine (but VERYYY expensive!), but just dialing straight out long distance will not work....we had our line installed by Bell Atlantic, and use Quest for long distance....I was told that someone else using Bell Atlantic also has to use the 10-10 codes to get through. Anyone have experience with this? By the way, the 10-10 prefix for Quest doesn't work either...beginning to think that Quest can't handle the 64/48 or 56/48 data we are sending....

The problem is that the call will not connect at all unless I use the 1010222 or 1010288 prefix...

In the Louisville market, the last time I heard mono (no pilot) from an FM station was several years ago when WLRS flipped from album rock to a "Mix" format. They ran a countdown -- generated by a voice synthesizer program on a Macintosh -- all weekend, and this was done with the pilot off. As soon as the countdown got to zero, they flipped the pilot back on, played (IIRC) "The Ride of the Valkyries," then kicked off the new format.

I heard WDQN just this morning, on tropo.

WWTN locally is also mono, with their news-talk format. On the other hand, the news-talk station on 101.5 and the all-sports station on 96.5 in Jackson, TN are both stereo.

Quite a few NPR stations switch to mono when airing spoken-word programming. Then again, others don't.

CBC Radio One really stands out during skip openings; most of their transmitters are also mono. I'm told one or two of the bigger ones are now stereo even though most programming is spoken-word.

Birthday Break, KOGO Signal Problems in North North County?!?, Sully and Scooter Moving, Treading the Other Radio News Sites, Howard Stern Moving?, Drew Carey on Millionaire Show, Monthly Rockline Guest List, Memo to San Diego Radio: Get Dr. Demento's Show On!

This column is brought to you by...

The Southern California Radio/TV Forum!

http://www.InsideTheWeb.com/mbs.cgi/mb1889

The Premier Forum For Discussing Southern California Radio Topics Now Under New Management!

Birthday Break

This past week, I celebrated my umpteenth birthday, as well as redesigning the layout of my webpage subject cluster at davesfunstuff.com. After all that work, which took about a month to perform, I decided to take some time off from the Radio reporting scene and just kick back away from the computer for a while.

KOGO Signal Problems in North North County?!?

The North County Times' Jay Posner, who writes the weekly TV/Radio sports column on Fridays, and John Fox, who covers the San Diego radio scene on radiodigest.com, both reported on the problems of KOGO 600's AM signal as you drive up the I-15 freeway. By the time you get to Riverside, the signal disappears, but there's more to the story.

"The signal fades rapidly up the I-15 corridor. And while you can hear the games, it's a chore to stay with them," says Posner, the article's author.

In the report, people were writing him saying they were getting humming noises on KOGO's signal along the coast and nothing on their portables in the most northern inland parts of the county.

I know there is an AM 590 in San Bernadino, KSZZ, so my guess the reason KOGO's signal doesn't reach there too well is because the signal is nulled to the north to protect 590 adjacently from KOGO's interference.

Jack Evans, Clear Channel's director of operations for the San Diego cluster of stations, suggests that the listeners might try moving their radios away from sources of interference and that "KOGO is still loud and proud."

There are differences between the new home of the Padres, and the former home at KFMB from 1979-99.

Fox adds in his article that KFMB's transmitter is located at the west end of Santee near the Mast Blvd exit. It has three freestanding towers that are split by the 52 freeway. It transmits at 5,000 watts day non-directional and 50,000 at night with a pattern strong to the west and northwest. KOGO has two towers just south of the 94 freeway in Encanto putting out 5,000 watts day and night with a pattern fairly similar to KFMB at night plus a little extra, small lobe of coverage in the direction of El Cajon, Santee and Lakeside. Being non-directional, KFMB should have an advantage in places like Escondido, Ramona and Julian during the day.

Fox confirms that KOGO's signal in inland North County is weak and suffers more interference from power lines and distant same-frequency stations, similar to what you get on 1130 and 1360 at night. In Orange County, KOGO is superior in the day.

At night, KOGO's signal up I-15 suffers from distant same-frequency station interference as does KFMB, but KFMB is at 50kW (5kW day) while KOGO is at 5kW. Driving northwards, KOGO disappears in Lake Elsinore due to KSZZ 590 nearby while KFMB at 760 holds up there until past the Lake. The I-5 corridor has 760 fading in Anaheim at day, but booms in Los Angeles at night when they turn up the transmitter (740 KBRT, a daytimer, operates at 10kW and has to be protected alternately from KFMB). KOGO's signal is alright along the coast through Santa Barbara, and at night, AM DXers report of KOGO's nighttime signal coming in Eureka or San Jose.

Bob Gonsett with CGC in Fallbrook, adds that "For daytime conditions, the pattern is determined by a specific signal strength contour. However at night, coverage is determined by something called the 'interference-free' contour, and that can only be calculated with a knowledge of all the interfering signals affecting that particular installation."

Fox writes that engineers are working on KOGO's transmission deficiencies as well as finding a possible Riverside county home for the Padres such as KXFG 92.9 in Temecula, which aired minor-league baseball games. For North County fans, the Padres should consider KSPA 1450 or KCEO 1000 as a secondary affilliate.

A Discussion about KOGO's signal in alt.radio.broadcasting shed some more light on the subject:

From: Doug Smith
Organization: Ham Radio W9WI

David Tanny wrote:
> I know there is an AM 590 in San Bernadino, so my guess the reason KOGO's
> signal doesn't reach there too well is because the signal is nulled to the

> north to protect 590 up there.

KOGO's pattern has a very deep null just west of due north. (about
355deg.) It's generally pulled in a bit (but still relatively potent)
from straight north to about 120deg., and also from about 200-270deg..
The main lobes of the pattern are at roughly 150 and roughly 305deg..

...the null does indeed seem to be in the direction of San Bernardino.

From: Allen Sherrill

>In the report, people were writing him saying they were getting
humming noises
>on KOGO's signal along the coast.
>
>Anyone wish to shed some light on this?

If there's hum on the signal and it's not actually being
transmitted by KOGO, probably one of the stations cochannel to
KOGO (or KOGO itself) is off frequency by a few hundred Hz.
That would create a beat note which would sound like hum in
radios.

From Peter:

KOGO's facility on 600 preceeds KSZZ's facility on 590.

KOGO is a Class III-A, while KSZZ is a Class III-B.

Class III-Bs aren't protected to the same degree as are Class III-As, they're
protected to the same degree Class IVs.

The upshot of this is KOGO undoubtedly established its DA-1 pattern very early
in the game, and with co-channel Class III-As in mind.

This allowed the San Berdoo station (590) to be dropped-in many years later,
probably after 1947.

From: Doug Smith
Organization: Ham Radio W9WI

According to the 1966 Yearbook, 590 (then KFXM) went on the air in
1929. However, according to Jeff Miller's site, it was on 1210KHz in
1931. The stations on that frequency were moved to 1240 in the big
shuffle of 1941. Presumably, it moved to 590 at some point not too far
before the current 1240 station in San Bernardino went on the air, in
August of 1947. (though it's possible it went through some other
frequency before landing on 590)

I wonder if KOGO was co-owned with a LA station when it went
directional? Maybe the null was necessary to avoid duopoly problems?

From: peterh5322@aol.communicate (Peter)

When I checked for occupants on 590, KFXM wasn't one of them in the great 1941 "cage kick". And stations on 590 didn't get changed (none below 680 got changed).

Most stations which did not have an assignment by December 1941 didn't get one until 1947, so my guess is KFXM didn't move to 590 until 1947, which is consistent with the current station on 1240 was assigned.

From:
Kevin Douglass
Engineering Manager
Clear Channel Communications

KOGO doesn't have a signal "problem" in Temecula. What it has is a properly operating directional antenna system. As pointed out by an earlier poster, the pattern has a null up that way which protects co-channel KGEZ in Kalispell Montana (600). Since the array is a simple two tower, there is a reciprocal null off the
opposite side of the pattern which protects KROD in El Paso, Texas. This doesn't
sound right until you know that the towers are aligned NE/SW. This results in a
minor lobe NE and two major lobes WNW &SSE. When this system was installed in 1947
no one had any idea that there would be such tremendous growth in the areas inland
from the coast. Oops...

By the way, the design is pre WWII and was finally built on the third site purchased. We are fortunate to have much of the correspondence related to this project. It makes for fascinating reading.

From: "Kent K9EZ"

I believe that quite a few stations are running into the "ooops" syndrome. In other words...their antenna patterns were built for earlier times....now the metro areas have grown outside of the pattern designed. I have seen a few stations move further out to cover the expanded metro area.

Sully and Scooter Moving

Starting Monday, KSDO 1130 http://www.ksdo.com has a new lineup. The only lineup change I caught was the Big Biz Show with Sully & Scooter moving from the 3-6pm slot (they're off Friday) and into the 9am-NOON slot.

Treading the Other Radio News Sites

Here's a brief look at what the other radio news websites are reporting. Due to my time off, you'll have to catch the Los Angeles websites very soon as they're updated Sunday and Monday:

Tomm Looney http://www.radiodigest.com/losangeles/ - Who woulda thunk the FM-potty talk station would be all over the Elian Gonzalez story while the AM talkers ran canned, pre-taped programs? Surely not Tomm Looney, who noticed Saturday that KLSX was way ahead of KFI and KABC as INS agents returned Elian to his father. Also: Revisiting Kelly Lange and KRLA; are KABC staffers circulating their resumes?

Don Barret http://www.laradio.com/ - New Country Husband-Wife Team for KZLA Mornings, Charlie Van Dyke has reupped for two years as the imaging voice at KRTH, and many other stories and chatter daily!

Gary Lycan http://www.ocregister.com/entertainment/radio.shtml - "Rhapsody in Black," the popular rhythm and blues show heard for years on KPCC/89.3 FM, has found a new home - KPFK/90.7 FM. It will be on 8-10 p.m. Wednesdays starting May 3. Jim Duncan and Wendi (Westbrook) did their final morning show last Friday on country KZLA/93.9 FM. The new morning team is married - Gene Gates and Julie Jacobson -- and they start 5-10 a.m. Monday. KGXL/1650 AM, which recently flipped from adult standards to jazz, will change formats again - probably Korean, and in June, when the sale goes through. Chagal Communications is buying it for $30 million from Mt. Wilson FM Broadcasters, headed by Saul Levine, who operates KJAZ/1260 AM and KMZT/105.1 FM (K-Mozart). "I do regret selling it but what it allows me to do is subsidize the FM so I can keep classical music on in this market," Levine said. Chagal's Jack Siegal recently sold KFOX/93.5 FM, which aired the Korea Times Network. So it's possible he will move it over 1650 AM. KNX/1070 AM marked its 32nd anniversary this month as an all-news station.

John Fox Fox Trots: The San Diego Radio Scene http://www.radiodigest.com/sandiego/2000/sd_042700_fox_1.phtml - A recent tour of San Diego's North County took John Fox to the sites of several old radio haunts, none of which is anything like he remembers. Isn't that always the way? He reminisces about the days gone past, with fishbowl studios in the old indoor Escondido Village Mall at the Farrell's Ice Cream Parlour end of things. Also: San Diego radio news and notes.

Randy Dotinga http://www.nctimes.com/preview/radio.html

The Planet's future may be worlds apart Arbitrons, KPBS-FM Streaming, World Music Radio Airs Commercials.

Ken Leighton http://www.sdreader.com/ed/calendar/blurt/ - Sets 102 Guest Blasting MP3 and Napster, Blink 182 on 91X vs. KROQ's alternative music coverage.

Howard Stern Moving?

http://www.radiodigest.com

Radio Digest reports that Howard Stern, now employed with CBS/Infinity, might be making changes in the way his show is received worldwide.

Once his contract expires with CBS, Stern wants to make changes in order to allow more people to be able to listen to him on the Internet so that he

can really become the King of All Media once again.

Currently, the local station KIOZ 105.3, which streams its signal on the Internet, has to shut off its signal like the other streaming Stern affilliates do when his show comes on, but that's Infinity's policy to tell the stations they're not allowed to stream Stern, and Howard might not be happy about that. Infinity, which owns L.A. talker KLSX and seven other stations there, does not allow their stations to stream on the Internet at all, so I can't listen to Radio-a-Go Go on KRLA 1110 at all.

Reports state that Stern wants to have his show available on the Internet with sole ownership of the show. He would still likely keep a relationship with CBS/Infinity though. He'd partner up with AOL and CBS/Infinity and do his show on the Internet, with full, live video streaming. It'll be the same show, just not on any particular radio station. It'll be a 'Net show. You'll have to log on to the Howard Stern show via the Internet, if Howard has his way.

Howard has talked also about doubling up with XM Satellite Radio so commuters will have access in their cars, making Howard the King of Satellite Radio as well as the Internet!

Drew Carey on Millionaire Show

Drew Carey wants Ohio libraries to be a millionaire.

The star of ABC's "The Drew Carey Show" has chosen Ohio libraries to benefit from his celebrity appearance on "Who Wants to Be a Millionaire?" Carey will appear May 2 and 3 during the game show's "Celebrity Week," which will feature celebrities playing for their favorite charities and causes.

Carey launched his comic career in 1986 at the Cleveland Comedy Club. His popular sitcom is based in Cleveland.

Monthly Rockline Guest List

Welcome to the monthly Rockline guest list! Rockline is broadcast live every Monday and Wednesday night. The guest list is taken primarily from what they announce on the show. Listeners in the U.S. and Canada can talk to them by calling 1-800-344-ROCK (1-800-344-7625). Questions can also be e-mailed to rockline@aol.com.

All shows start at 11:30pm ET / 8:30pm PT and run 90 minutes unless otherwise stated. Previously recorded shows are marked with an asterisk (*)

Monday:

May 1 - Stone Temple Pilots
May 8 - Creed

Wednesday:

May 3 - Deep Purple
May 10 - ...
May 17 - Peter Frampton
May 24 - ...
May 31 - Don Henley

Also coming soon (we hope!): Jimmy Buffett, Kid Rock, Metallica, Oasis, Rage Against the Machine, Smashing Pumpkins

*** Guest list subject to change without notice

http://drchuck.net/rockline - Visit the Rockline web site to see:

+ The most up-to-date guest list
+ Rockline WWWBoard... discuss the show and trade tapes!
+ Rockline Archive... the entire Rockline guest history (ok, most of it)
+ Rockline Station Roster... listen on your radio or on the web!
+ Rockline FAQ
+ The nifty Rockline button, link your web page to Rockline!

*** If none of your local stations carry Rockline (either on Mondays or Wednesdays), call some of them up and ask for it!

...don't try to lay no boogie-woogie on the king of rock 'n roll...

Memo to San Diego Radio: Get Dr. Demento's Show On!

So when are these corporate radio bozos in San Diego ever going to get it right?

San Diego's intelligent radio audience has access to the overrated Dave, Shelley and Chainsaw so-called laugh riot full of potty humor on KGB, but shut out when it comes to intelligent humor and mind-expanding music found only on the Dr. Demento Show.

Upcoming Topics on The Dr. Demento Show

April 30 (00-18) Dr. Demento's Dairy (songs about cows)
May 7 (00-19) May Madness Contest winners

Yup. San Diego's funny music writers were left out in the cold as Dr. Demento's affilliates ran a Demented Song Contest recently (through April 1st) and San Diego's funny music fans, among other cities, couldn't compete because no local station carries Dr. Demento. It leaves me to wonder whether San Diego is still part of the United States or is San Diego in a country of its own devoid of musical and humor culture. I seceeded from San Diego mentally around 1981 or so and live in some other part of the U.S. in

the San Diego city area.

Even I wrote some songs, but with no San Diego outlet for funny music, who would listen?

Is the silent majority maintaining the status quo of settling for dumbed-down corporate-carved genres, cookie-cutter formats, and predictable playlists? Judging from the Aribitrons, the San Diegans responding to the diaries just don't know any better about the kind of radio they are missing out on.

The radio revolution is not being televised in San Diego!

Meanwhile, visit my Dr. Demento page, the new Funny Albums/Lyrics Page where you can buy some funny music out recently, listen to my DFSX Comedy Radio playing the best hits of all time, heck even listen and download Dr. Demento shows, at my portal at http://www.davesfunstuff.com.

Don't let San Diego corporate radio dictate how you should spend your music listening time!

This post is sponsored by Pokï¿½mon. Gotta collect 'em all!
Listen to DFSX Comedy Radio: Paste http://166.90.143.141:8572/ into WINAMP Open dialog!
Al-Team #80 (alt.music.weird-al) http://www.davesfunstuff.com/ for South Park, Radio/TV, Dr. Demento, Today in History, Funny Stuff, "Weird Al" Yankovic, Icons, Eight is Enough, TV Guide Parody, Celebrity Birthdays, etc.
If Susan Lucci can win an Emmy, anything is possible!

I think WDBL-FM in Springfield TN broadcasted in mono until the early or
mid 80's. They also had reverb. Another station in Louisburgh TN
boradcast in mono but still had stereo. Their AM broadcasted one channel
and the FM broadcasted the other channel.
At 10:47 PM 4/27/00 -0400, you wrote:

1010222 is MCI and 1010288 is AT&T. Call Bell Atlantic and tell them
you want MCI or AT&T to "PIC" your ISDN lines. In my experience, MCI
is the best for being able to deliver data calls anywhere in the U.S.
AT&T seems to be good too. Your suspicions about Quest are probably
correct.

Message-ID: <006801bfad65$5798d840$067571c1@default>
Source record: 19671

Hi

This is the first time I have used a news group so any suggestions in how to use and what to look for would be appreciated. I have worked in the UK radio business since 1969, even worked on the pirate ships for a while. My latest exploit is to set up a production company (imaging, commercial, promos etc). In the past I have used anumber of Audio Editors includings Pro Tools, Sound Station, Sabre and dabbled with Sadie and Soundscape. I have the choice of using Pro Tools or Soundscape as the production audio editor, do you have any experience or suggestions. Which of those two systems do you think would be best for ease of use, speed, sound, backing up, restoring old sessions etc etc.

All the best and thanks

Dave Owen.

Interesting. WDBL-FM is solidly stereo today, but they're still a
rather interesting station. In the mornings, they're a typical
small-town full-service station. (which around here means country music
between the farm reports and trading post) Sometime during the day,
they switch to a simulcast of co-owned WYYB Kingston Springs with a
format I'd describe as folk music though it's really wider than that.
Then, at night they go urban. And they're completely off the air for a
few hours overnight. (how many FM stations still actually sign off?!)

It sounds like they shut off the AM station sometime in the last few
weeks, I haven't heard it for awhile. It was just simulcasting the FM.

Not sure if they still do this, but WBUR-FM in Boston has been known to switch into mono when they do news or talk programs (they're NPR), which is often.

Years ago, my station (WMWM, Salem,MA, Salem State College) used to have occasional phone line troubles and one of the "speakers" (phone lines) would go dead so we'd be stereo but only on one channel. Then we'd switch to mono until it got fixed, so we'd be on "both speakers"
at least (but in mono...)

WBUR is full-time talk/NPR now, for the last few years. I think might
do a couple music shows on the weekends, and that's the only time they
turn on the pilot.

Definitely. NOT QWEST (previously LCI). Sprint, MCI, AT&T are the leaders. I
have AT&T.

Pro Tools has more systems out there than anyone else, with the most 3rd
party development and support as well. People I know who've used both
like Pro Tools for what it can do now and in the future and Soundscape as
it seems to be a bit more stable.

Since you've used both, just get the one you like best since you are going
to have to use it every day.

Not any more. It's pretty shabby. WERT-1220, and WFIN-1330 make it in
here better.

I suspect that the ground system has seen better days.

The station that surprises me is WJYM-730 in Bowling Green. You can hear
them real good at night when they are on their prsa.

I am new in this biz and am so amazed and impressed by the knowlege that you all have about radio biz.

It might sounds silly but II am just wondering how could you know all those stations broadcast in mono. Have you live in ALL of those areas and know those stations?

I wonder how many years it take to know all those. I enjoy reading this group. It seems everybody is so supportitive. Thanks.

Ok. Who's brilliant idea was this? While listening to one channel of
stereo works to a point, it really doesn't work all that well. Just try it.

Reminds me of a story. I went to my dentist's office back in the early
90's, and they had a variant on that idea set up (though they didn't realize
it.) Took only a couple of minutes before i realized that something was
seriously wrong with the music coming from the ceiling speakers. They had
put one channel into the speaker in the waiting room and the other into a
speaker in the inner office where the receptionist was. I mentioned this to
the receptionist (whom I'd known for years by then) and asked if I could
take a look at the setup. So she led me over to where the receiver was, and
after a quick perusal I switched the selector over to mono, Not only did it
sound better, but it eliminated that pesky bit of static that was showing up
as well. I asked for a small discount on my cleaning, but she declined. :)

1927. A Different Kind Of Oldies Show - Update - 4/29/00

Newsgroup: rec.radio.broadcasting
Date: 2000-04-29 00:00:00 UTC
From: Regnad Kcin <evetsgib@iasrod.gro>
Message-ID: <8eeh2f02gkh@enews1.newsguy.com>
Source record: 19683

I've been way behind on a lot of things, including getting this weeks show up to WBCQ. We'll feed it either live by phone or we'll sent up an MP3 version by the net. For those who either e-mailed or wrote, I'll be getting to your mail this weekend.

We've redesigned our website. The new index frame makes it easy to navigate into any of our pages without having to back up through previously viewed pages. All outside links now start in a new browser window allowing you to return to us immediately when you're finished viewing our friends pages.

On May 20th, compaq.net is moving from uunet to MSN. We have not yet received a software package, other than the usual promotion. Special pricing for those who have already paid the previous provider for the service and domain info is what we're waiting for. As soon as we're able to make the switch over, we'll move the website and install a redirecting webpage on the old host. Please watch for postings on the usual newsgroups for our new domain name, if any.

Our a STEREO MP3 stream live365.com, (open http://166.90.143.149:9056 in your MP3 audio player), is still under test. Usually the presentation of the latest program on Saturday nights require a 56kbs modem connection or better. During the week, we'll change that to the standard 33.6kbs connection. We may also test other connection speeds from time to time, and we may present reruns of old shows or even advance plays of upcoming shows. I am still considering lowering the MONO audio feed to a 28.8k connection, we just seem to have run into a software bug in trying to convert the format and uploading it to live365.com so I may not pursue that any longer. What I DO need is feedback on both streams. If you have connection problems and would like us to lower the MONO feed to 28.8K please let me know it. If you would like the stereo feed to be 56K all the time, also let me know.

1928. KVIL cart machine story!

Newsgroup: rec.radio.broadcasting
Date: 2000-04-29 00:00:00 UTC
From: se <steve5@airmail.net>
Message-ID: <390AD5DF.1177@airmail.net>
Source record: 19684

okay, here's a good cart story for you.
Years ago at KVIL in Dallas, Ron Chapman would create a promo every Christmas season that would begin running just after the Christmas special ended at 12 noon Christmas day. It was the "KVIL stereo test kit". Intended for those who received a new stereo for Christmas, it featured Ron's voice giving a basic "left/right" test using his voice so you knew you had the left and right speaker attached correctly. By instruction, it was always followed by a "very stereo" song...like some of the old Beatles tunes or whatever that had voices completely in one side, music in the other or whatever. It was very cool sounding on the air and was a staple on KVIL Christmas Days for years.
Well, return to Christmas Day 1978. At 12:20 p.m. it runs for the first time that year and as I'm standing in the control room listening on the monitors I notice on the promo when Ron says "this is your LEFT speaker" it is actually coming out of the RIGHT control room monitor and the VU meter is jumping on the RIGHT meter also!...naturally the right is then on the left!!!...As I am looking at this with a puzzled look, the studio hotline begins to ring. A reminder of Ron's attention to detail in those days - the promo wasn't even over when he phoned in to hotline me! As I answer he's not amused over the fact that the thing is BACKWARDS on the air! We were promoting this all week before
Christmas and we are supposed to be THE authority on LEFT/RIGHT balance for the "stereo test kit" and we were DEAD WRONG!...Ron asks if it was wrong on the VU meters which I said yes it was...so he gets the number for the engineer from the studio roledex from me and says he'll have someone come up....So here it is noon Christmas day and an engineer has to leave their family to come up to the station and check all 6 cart slots to be sure ALL are correctly plugged in to the correct LEFT or RIGHT...as it turned out 4 of the 6 were NOT, thus the problem! This required re-soldering the output plugs of the 4 cart slots which took him about an hour - in plenty of time for the second airing of the "stereo test kit" promo (which was on the schedule every hour for the entire rest of the day)....
Now, at 1:20 p.m. the promo runs again. This time it is perfect and the LEFT comes out of the LEFT, the RIGHT comes out of the RIGHT...
Promo ends, song begins, and the HOTLINE rings again...this time I'm laughing as I answer because just as the promo ends it dawns on me (and apparently Ron too)...he's on the line laughing as well because we both realize that last hour, the listener is probably checking their new stereo (since we've been promoting the fact that they would be able to) and upon hearing the promo realizes "damn, i've got it wrong!" and then most assuredly switches the wires on the back of their stereo!....to which now, one hour later they want to re-check it to be sure they did it right and now THEY'RE WRONG AGAIN!....It was a truly hilarious moment

as Ron and I realized this at the same time. As I recall, after the laughing subsided, Ron said "boy, we're really fucking with them NOW!"
A great CART machine story and absolutley true!

1929. Distributary Delivers Huge Files..

Newsgroup: rec.radio.broadcasting
Date: 2000-04-29 00:00:00 UTC
From: "@home" <djold1@home.com>
Message-ID: <wRAO4.61712$lg.285216@news1.rdc1.tx.home.com>
Source record: 19685

Electric Works Corp, now entering its 20th year, announces Distributary. Designed to move huge audio and multimedia files in the background without clogging email, Distributary make one-to-many file distribution simple and easy without the use of expensive routing hardware. It uses a simple Explorer type interface.

Files packages are compressed and encrypted before sending. A file package may be sent to one or more sites or groups of sites. Each file may have extended properties like a long name and a long memo which are especially useful in automated stations. Distributary SR server will deliver files to the exact directory at the remote site including production room and/or on air automation.

In broadcasting, Distributary makes it easy to move files to & from Talent, Weather & News sources, and between central production and group stations.

Check our web pages at www.distributary.com

Our operations page is at www.distributary.com/sendit.html

See a special Radio web page (slow loading) at
www.distributary.com/radio.html

Distributary just received a fine review and a four-star rating from ZD Net. Click the URL below
http://hotfiles.zdnet.com/cgi-bin/texis/swlib/hotfiles/info.html?fcode=0017L
J

Electric Works Corp and its predecessor The Management which started in 1980, is well known in the industry for its Super Log traffic systems, Digital DJ(tm) and AXS(tm) digital audio systems and we welcome our 2000+ previous customers to consider Distributary.

Thanks,

Pete Charlton

Hello Out There!

"Crazy" Jay here! This week on the "Crazy" Jay Show my guest are Lurlene The Trailer Court Queen, Mandi Martin (Pinball Champ), also Billy Dare and Todd Johnson of Billy Dare and the pumps, and Heywood Banks. Plus I have a special co-host who brings some music from his own collection. And Glenn "The High Tech Hobo" Robinson plays some songs about camponoligy?

>as well. I asked for a small discount on my cleaning, but she declined. :)

I've got one better. A few months ago I took my son to a local pizza place. The way they had the speakers wired all I could hear was the L-R*! All lead vocals were gone! The good news is so was the DJ! I volunteered to take a look to see if I could correcet the problem. After seeing the snake pit of wires I declined.
A local Subway also has only one channel coming out of the speakers. I mentioned it to the kid on duty but he didn't comprehend what I was talking about.

* L-R = left channel mixed with the right channel with opposite polarity.

That reminds me of a "going away" present cart I left in the studio before leaving a station. I had edited "Honky Tonk Women" so that a small part of the first verse was replaced by the equivalent part from the second verse. In effect what Mick sang sounded like something that normally wouldn't be airable! A month later they were still playing it! E-mail me if you would like to hear the edit.

KFI Radio in Los Angeles reported on their 3 pm news that Mark Denis, 59, long-time "Voice of KFI" and traffic reporter, passed away this morning (Saturday) at his home in Oange County.. Mark had returned just weeks ago from open-heart surgery and co-workers at KFI say Mark had commented several times this week of not feeling well. Mark's radio career began in the early 60's in Southern California at such stations as KYMS, KFXM. KMEN and KGB. Mark was originally hired as Program Director at KFI in 1969 and worked at KEZY throughout the 70's before returning to KFI in the mid-80's,

Hmmm...maybe! The Twin Cities once had KEVE/1440 and its sister FM, KADM/92.5, simulcast from Golden Valley, MN in the early-to-mid '60s. They were known as "Adam and Eve." Fortunately, the FM used the more conventional approach to multiplex stereo.

Today, the stations are KDIZ and KQRS respectively.

Was there ever an Abel and Cain combo anywhere? :)

I think the limits are addressed in Section 15 (if I remember correctly) of the FCC's rules and
regs. They allow for no more than 250MVolts at 3 Meters from the antenna. Basicaly the power of
a Mr. Microphone ("Hey good-lookin' we'll be back to pick you up later", loved those Ronco ads!),
a CD player x-mitter for your car, or those little boxes that real-estate agents use to broadcast
to your car radio as you drive by. Movie theaters also use these to broadcast "closed-circuit"
descriptions of the action on the screen for the blind.

I know the answer is out there somewhere...

Please help me win a bar bet. What was the very first commercially available major-label CD released in the USA? I'm saying it was "Born In The USA" by Bruce Springsteen. My friend says it's U2's "The Joshua Tree". Are we both wrong or what?
I'm looking for the first commercially available CD pressed back in 1985 or whenever the great changeover happened, not some limited-edition

high-end audio lab prototype thing. Any information would be thunderously appreciated. Thanks in advance.

Two classical stations (WCRB and WGBH, I think) in Boston did stereo broadcasts of the Boston symphony for some time. I remember reading that some FM stations (perhaps these) paired up in order to do Quad broadcasts for awhile, as well.

Since at least Saturday afternoon (4/29), a tape loop containing snippets of various historic speeches and events has been playing on KPAM 860 AM in Portland, OR. The station was formerly running a Contemporary Christian music format which was simulcast on KZTU 660 AM of Junction City. The Christian music format is still playing on 660 as I write this. Anyone know if KPAM was sold or what the new format will be?

When the first (professional) cd-player was released in Holland, i got a Boston cd with it, along with a test cd. Both were US-pressings. That was in february 1984... the cd-player was from Technics, a frontloading upright placed "digital disc player". Cost around 8000 Dutch guilders then (some 3500 us$)... Philips and Sony (the cd-inventors) released a consumerplayer that same year, but a little later...

Hope it helps...

Good luck!

1950. Re: first commercially available CD?

Newsgroup: rec.radio.broadcasting
Date: 2000-04-30 00:00:00 UTC
From: Shawn Fink <finkster@en.com>
Message-ID: <390D00D4.238C9370@en.com>
Source record: 19613

Actually, "52nd Street" was probably the first "pop" commercial CD release. I also remember hearing that Donald Fagen's "The Nightfly" was the first album to be recorded digitally. In fact, I've read some columns by Roger Nichols who produced and engineered that album about the troubles they experienced trying to sync-up their 2 24 track 3M digital recorders and then switching to Sonys and trying to get them to Sync.

As for Beethoven's 9th, I can't verify that it was the first release, BUT, it does play a role in the development of the CD. According to a brief history of the medium which I read somewhere a while back, the R&D guys at Sony came to Sony chief Akio Morita and asked how long their new digital playback medium should be. Morita was a Beethoven freak, and especially fond of his 9th symphony. Morita told his engineers that a standard master-symphonic performance of the 9th lasted 74 minutes, and he'd love to be able to hear his favorite symphony without having the tape flip or the record change in the middle. Hence we were stuck with 74 minute CD's.

WJXQ in Jackson, Michigan did that the first time I traveled through that area, some 20 years ago. While I was listening (mono car radio) they played Led Zepplin's "Whole Lotta Love". Talk about a psychadelic experience!

How would you know the power without first investigating the fcc rules about that and getting info on transmitters, antenna, loss in the cable between the transmitter and the antenna, etc. You are on the internet. Why not go to a search engine (like google.com) and put in low-power fm transmitter - and see what you get.

You may have to spend several hundred - maybe a thousand dollars. I did that on am when I was a kid in the 50's early 60's. Later I owned 4 stations that covered the northern third of the state of Indiana. I wish you the best!

Wasn't there a loophole for 'Mr. Microphone' type of
gadgets, like around 100mw or so? I remember building
the Radio AM radio transmitter as a kid back in the 60's,
and I think that was 100mw and they had some kind of
antenna limit you had to follow.

Subject: Rock-it Radio show #161 Is out there -- The Sounds of Los Angeles

Hello Everyone,

Our star DJ at Rock-it Radio Lane Quigley over at Studio B. Has
produced quite a great show this week with -- A tribute to the Music of
Los Angeles in this special Oldies Program. Here is the playlist
and intro. here.

This Memory Lane show has host Lane Quigley paying tribute to his hometown
of Los Angeles, California. with 29 great songs recorded in and around
L.A.

Take a listen to these forgotten and obscure gems from the fifties and
early sixties.

Memory Lane Show Sounds of Los Angeles Playlist-- Rock-it Radio
show #161...

1. Jelly Bean -- Don & Dewey 1957
2. Rockin' Man- Richard Berry 1955
3. Little Girl -- Ritchie Valens 1959
4. Boss -- The Ramblers 1962
5. Over and Over -- Thurston Harris 1958
6. Happy Jack -- The Rivingtons 1962
7. Stumble and Fall -- Darlene Love 1964
8. Yama Yama Pretty Mama -- Big Sandy 1998
9. Floo-EE-OO-Wee -- The Calvanes 1955
10. My Babe -- Righteous Brothers 1963
11. Too Much Tequila -- The Champs 1960
12. I'm a Fool -- The Teen Queens 1956
13. Stranded in the Jungle -- The Cadets 1956
14. Somethin' Else -- Eddie Cochran 1959
15. Real Pretty Mama -- The Meadowlarks 1953
16. Let me Know, Let me Know -- Oscar Mc Lollie 1958
17. Got a Girl -- The Four Preps 1960
18. Sparkle and Shine -- The Four Coquettes 1961
19. Dance by the Light of the Moon -- The Olympics 1960
20. Misirlou Twist -- Dick Dale & the Del Tones 1962
21. I wanna Know why -- The Cliques 1956
22. Flapjacks (Part 2) -- Googie Rene 1963

23. Hey Senorita -- The Penguins 1954
24. Teenage Doll -- Ricky Nelson 1957
25. A breath of Air -- The Squires 1956
26. Short Walk -- Sonny Knight 1956
27. Strange Love -- The Native Boys 1956
28. Adorable -- The Colts 1956
29. That's All -- The Midnighters 1965

To tune into Rock-it Radio programming you must have the Real Player
--- If you don't have one -- you can download one for free at

~~~~~~

Another Contestant Winner

Congratulations to our latest Winner of our CD giveaway ---
Jorge Ruiz of Las Palmas - Canary Islands Spain was the first
person to write back and tell us that the Flip side of Jerry Lee Lewis'
first release of "Crazy Arms" was "End of the Road".
We have sent Jorge a copy of the Haywoods latest and Hottest CD
"Drinkin, Cryin & Moanin".
We will be featuring that Song -- End of the Road in an upcoming Rock-it
show. And also another Contest at that time.
~~~~~~

Keep a Look Out

Rock-it Radio's Melissa Arenz has just returned from assignment and a heck
of an assignment it was !!! -- Viva Las Vegas 2000 -- With plenty of
pictures and stories to tell and will be a special feature on the Rock-it
Radio website at: http://www.rockitradio.net
Keep an eye out for a new place to click to called:
"boppin' about with Missy"
we should have more information on this latest feature in the next
Rock-it newsletter.
~~~~~~
Don't forget when you can please use CD Now or Amazon.com off of
our website at http://www.rockitradio.net
You can very easily save $ from your typical retail outlet for music,
videos and books and you help keep Rock-it Radio rockin' on the internet
and paying for webspace to bring you these shows.
~~~~~~
And remember requests, and dedications are always gladly looked for and
filled on the Rock-it -- Just e mail us at our studio here at
Rockitradio@earthlink.net

all the rockin' best until next time,

Bennie Dingo
Rock-it Radio

All you are doing is using the dial around access codes for AT&T and I
believe either Sprint or MCI. 1010-288 is AT&T. Why not just go with AT&T,
Sprint, or MCI as your carrier of choice and dump the dial arounds?

I believe digital recording was around even before then - at our
college radio station there was a copy of the soundtrack LP to the
first Star Trek movie, it was on Atlantic, and in place of where they
usually put STEREO on the label, it said DIGITAL. This was issued in
1979.

There was a great digital demonstration CD on Elektra called THE
DIGITAL DOMAIN, probably put out around 83 or so, tons of effects,
some music, speech, synthesized speech and pianos, all recorded or
created digitally - wish I could find a copy now....

Assuming the "radio source" is an FM station...

You need a directional antenna. The process of "triangulation" consists of determining the direction from your receiver to the transmitter, then moving your receiver and repeating the process. You can then draw lines on a map from the two receiver locations at the bearing you measured, and see where the lines intersect.

A large Yagi antenna is the "off-the-shelf" answer. You'd also need a FM radio with a signal-strength meter so you could tell when the antenna was pointed at the station. Most better tuners have this - most less-expensive sets don't.

Hams (and, I suspect, the FCC) will frequently use a Doppler-based direction finding system. This involves a number of small vertical antennas arranged in a circle, and connected to a circuit that connects each antenna to the receiver in sequence and measures the receiver's response. It then lights a LED indicating which antenna is in the direction of the station. Designs have been published in the "QST" ham radio magazine; (http://www.arrl.org) one would think they would work fine in the FM broadcast band with proper scaling of antenna and cable lengths to accomodate the lower frequency.

I'm chief engineer of Talk Productions in Dallas. Just wanted to let everyone know we have a fully equipped talk show studio/control room available for rent. We currently use it on weekends only. Also, if you occasionally have a talent in town that needs to do a show from Dallas, let me know and we'll be glad to help. I might need the same favor sometime...

PR&E Radiomixer 12 channel board
Telos 1x6 with Assistant Producer software
Denon DN961FA CD players
(2) Tascam DA-40 DATs
SAW recording station
(2) Telos Zephyrs
(2) 360 Systems Instant Replays
Computer cart playback system
Eventide DSP 4000 Harmonizer
Eventide 8 second delay
25 and 35 Hz tone generators
T1 Internet access in both rooms
Radio Systems Master Clock system

Thanks,

Steve Walker

> available major-label CD released in the USA?

There was no one recording. CD was available in Japan for
some time before it was in the US, and so recordings by Denon and
by the Polygram group from Europe were available in substantial
numbers (like maybe 100?) all at once, simultaneously
with release of the first CD players here.

I have no idea how many of these were pop recordings, I don't bother
with junk.

I know that along with my player I bought a Mussorgsky-Ravel Pcitures
at an Exhibition on London, a Beethoven 5th Symphony on Columbia/Sony
and a Brahms chamber work on Denon with the title in English on the
jewel box spine and the CD label, but 100.00% of the rest of the stuff
in Japanese only.

Message-ID: <mS/12mHbs-0008xlS@mail.airmail.net>
Source record: 19626

For a short time in the late 50's, ABC-TV ran a Wednesday Night version of the Lawrence Welk show(probably where they got the idea to triple run "20/20" and "Millionaire.")

I distinctly remember an announcement in the show saying you could hear the program in stereo by tuning a radio to an ABC network radio station (for one channel) and using the audio from the TV for the other channel.

Which begs the question, why do I remember this?

Hi,

Anyone know what's up with Barry Scott's Lost 45s show? The Lost 45s web site (www.lost45s.com) has been down for over a week. The link from DiscJockey.com has also been removed. Barry's new CD is due out this Friday, May 5, 2000. If anyone knows Barry or is familiar with what is up, please post the info. Thanks.

Tom

>Interesting. WDBL-FM is solidly stereo today, but they're still a
>rather interesting station. In the mornings, they're a typical
>small-town full-service station. (which around here means country music
>between the farm reports and trading post) Sometime during the day,
>they switch to a simulcast of co-owned WYYB Kingston Springs with a
>format I'd describe as folk music though it's really wider than that.

The industry term is "Americana." The term generally refers to non-pop country (in other words, they don't play Shania or Faith) and roots rock (anything that sounds like 50s or non-punk 60s music), along with some blues and folk that fit in. Not a powerhouse format yet by any means, but gaining favor with adults who are disenfranchised by country and active rock and don't want to hear "Stairway to Heaven" for the umpteenth time on classic rock.

And like many other public radio stations, WBEZ in Chicago turns the stereo light off during most of its news-talk programming (unless "Morning Edition" or "All Things Considered" has a story produced in stereo). It's on for "This American Life" and the night-weekend music programming (and a few years ago, "Wha'd Ya Know?" started being produced in stereo).

If you are a female with Voice-Over experience, and can deliver a sincere, conversational, natural-sounding read for a character of a female between 18 and 30 years old from the Southeastern U.S. (Southwest Virginia, particularly) then I need to hear from you yesterday.
I have three radio commercials to produce, each with a different voice. Your character part would is :40 seconds, and I will need to be on the phone with you while your V.O. is recorded. Each voice-over pays $50. You must have access to professional quality microphone / recording setup. Prefer audio delivered via MP3 format, or ISDN. If you do not have either of these available, then I'll require priority mail shipment(your cost--$3.80) on 1/4 reel, DAT, or CDR.
If the client is pleased with the campaign, then you may be asked to do future versions of the spots as well, and we will keep your contact information on file for use in other projects, even if we don't use you for this project.

If you are interested, please e-mail me IMMEDIATELY at: scottymatthews@writeme.com. Please do NOT attach audio files to your e-mail. Please DO include your contact information, and if possible, a link to an on-line demo. Those without online demos may audition by phone.

I will accept responses to this audition call until Wednesday 5/3 at Noon.

Thanks,

Scotty

I recall my first Japanese CD player sometime like late 83 or in 1984, and
getting a bunch of Japanese CDs for the Beautiful Music format syndication I
was doing by artists like Caravelli, Franck Purcell and Paul Muriat.

| > of phase, so what you heard in mono was L-R!
|
| WJXQ in Jackson, Michigan did that the first time I traveled through
| that area, some 20 years ago. While I was listening (mono car radio)
| they played Led Zepplin's "Whole Lotta Love". Talk about a psychadelic
| experience!

Another tape I have: KSFT(then FM, now AM) simulcasting KKJO (then AM, now FM) from St. Joseph, Missouri, during a severe thunderstorm on July 4, 1980. The FM clearly was picking the signal off the AM air monitor *after* Optimod (or Optimod-like) preemphasis. Static from the AM signal was also relayed on the FM!

It is truly the most annoying processing I ever have heard on an FM station and that is saying something indeed.

Wouldn't doubt that ground system needs some work, or
a bulldozer to the whole array. It's 500w-d, four
tower with 145 watts psra and a couple of watts night.
You'd think if they can rebuild WERK's pattern with
three towers instead of six they could take WCSM's and
do it with two towers. Sharp nulls west, one minor SW
lobe, pretty much nulled straight south (protects
WIOU-1350, Kokomo,IN; WLBC-1340, Muncie; the OLD
WSAI-1360, Cinn.

WJYM does get out well (anyone remember the old WMGS
on 730 in Bowling Green...my dad used to listen to
their country format before the switch to Jimmy
Swaggart in 1977 or so.) Thir pattern resembles a
bowling pin and is audible as far south as the north
suburbs of Cinn. (Wonder how they do in Toledo and
Northwards, since so much of their signal goes south).

Another Ohio station that gets out real well is
WFRO-900, Fremont. They reach Ft. Wayne (even on their
night power!), and daytimes reach as far south as
Piqua, Ohio. That's from Lake Erie!

Eric Aiese <aiese@fas.harvard.edu> writes:

>Two classical stations (WCRB and WGBH, I think) in Boston did stereo
>broadcasts of the Boston symphony for some time. I remember reading
>that some FM stations (perhaps these) paired up in order to do Quad
>broadcasts for awhile, as well.

Both stations still do BSO broadcasts. WCRB's, on Saturday evenings, are
webcast as well.

The quad broadcasts you mention were done by WGBH and WCRB in the late
seventies; they were the brainchild of Richard L. Kaye (a ghost, by the
way).

From 1954 until FM stereo was approved in 1961, WCRB used to do BSO
concerts (and other programming) in stereo by broadcasting one channel on
AM 1330 and the other on FM 102.5.

Remember, that it took them several YEARS to record "The Nightfly". Fagen is a noted perfectionist (his last solo CD, "Kamakiriad" was 12 solid years in the making). So it's possible that digital recording was around in the late 70's, and that "Nightfly" was still the first album to be recorded entirely digital.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

>created digitally - wish I could find a copy now....

You mean Elektra 9 60303-2? Yes, it has an '83 date on it. Remember the "Lions Are Growing" bit? I wonder what they were smoking at the time...

My favorite part of the CD was the track that was just the quiet outdoors, which lulled you into a dreamlike state, until the sudden passing of a jet brought you instantly back into the real world. Man, the speakers that I would have blown in an earlier time!!

I still remember being just completely awed by the dynamic range and the low noise floor. I'll have to pop it in the player for a retro visit.

The "Produced under license from Warner Special Products" credit on the back of the CD always struck me as unusual, since it was normally the special products divisions licensing things from the parent labels.

When WAYL-FM/ Minneapolis switched to classic hits KLXK in the late eighties, one of the CD players was hooked up out of phase. On top of that, they were playing The Mamas & Papas' "Creeque Alley" from MCA's "16 Of Their Greatest Hits" CD, which was mastered out of phase on that track.

It took a day or two to figure it all out.

Don't know about the radio/TV gimmick but recall when stereo was first talked about you could use two AM radios, one tuned slightly higher and one lower than the center and get a stereo effect. This was ballyhooed on the 'mighty 690' in Tijuana==Ted

After Chris and Ty, try the Miami Voice Works for the best voices in South Florida. Men, Women, union and non-union. Wide range of styles and types. You contact the artist direct. RealAudio files available for all artists. All have access to ISDN or can deliver via the net as WAV, MP3 or virtually any other format you desire. Need hard media? Delivery overnight by DAT, Reel, Minidisc or CDR.

how about nationals coming in on 16 inch transcription disc????
depending on what it was, you could get 10 or more (up to 15 mins per
side) nats coming in on 16 inch....this was 1940's vintage....

I also saw a few 12 inch discs pressed....not the LP microgroove
stuff, but large 78 size grooves, but the disc was 12" and ran at 33.

here's a shameless plug, but quite appropriate....drop by this web
page on my site at:

http://members.xoom.com/snarfdude/1940s.html

you'll find some 40's vintage canadian national stuff.....including a
PSA with some deep voiced guy that sounds a hell of a lot like Lorne
Greene......hell, it's probably is him....he WAS the voice of doom for
the CBC during WWII. real audio streams and mp3 downloads.

nice scans of the labels too.....

regards

SD!

Updated Jan 4, 2000

Subject: Southern California Radio and TV Page

You can visit my Southern California Radio and TV Page at...
http://www.geocities.com/TelevisionCity/Station/2700/indexrad.htm

or

http://www.davesfunstuff.com/radio

Now with links to related news sites, as well as links to 13 messageboards!
I'm also accepting news bits to post in my Radio/TV news section.

NEW! Radio Station Logos section!

Also included: a list of HDTV stations, plus a list of stations
broadcasting in Spanish for all of Southern California and Northern Baja.

Radio programs in the station listings.

Links to all the local area radio and TV stations that I know of, and noted
which ones are in Real Audio

DX catches in the So. Cal area plus all the DX stations in North Americal.

Digital TV Channel assignments to the local area stations.

Frequency lists of the TV and cable sounds for those with scanners and
pocket VHF radios.

Expanded local AM and FM radio talk show listings. Formerly restricted to
morning drive shows, but this comes in handy since shows keep getting shuffled
around and times switch. Always accepting updates to the program guide.

The addition of four pages from the FCC database, reeditied into the local
AM, local FM, local TV and nighttime AM DX-ing radio stations. I wrote a
QBASIC program to compile the huge tables, but I changed no fact from the
databases, as they contain errors, especially with the Mexican stations and
owners. I should be updating this soon.
I still have my own four pages of AM, FM, TV and DX pages I composed with
formats and updated and corrected calls that I came across.

Some recent radio news of note on the front page.

good luck

Let me see if I remember this correctly. (This was a big deal to me at the time.) The first four Beatles CD (Please Please Me, With the Beatles, Hard Days Night, Beatles for Sale) were released in February 1987. {Don't get me started on the stereo vs. mono on those, by the way....} The next three (Help!, Rubber Soul, Revolver) came out in May. They held off Sgt. Pepper until June 1 1987, that being the 20th Anniversary of the original release. (ObRadio: I think I still have Scott Muni's Ticket to Ride special from June of 87 all about SPLHCB. Recorded in dbx noise reduction even.) I believe Magical Mystery Tour, White Album and Yellow Submarine came out in August, and I would guess Abbey Road and Let it Be would have been in November.

I started managing the CD department of a local record store in late 1983, when I was between radio jobs. (We had one of those early, expensive single-beam CD players. Cost around $1500.) At that time, there were probably 120 CD titles available. Mostly Telarc or RCA classical material; only a couple of dozen pop titles. Imported titles were more numerous, with DG, Phillips, and Denon among the most common labels represented. But the cool pop titles -- e.g. Abbey Road, as a Japanese import -- were difficult, and expensive, to come by on a regular basis.

There were so few titles, and relatively few customers, back then that I was able to put together a little four-page catalog and mail it out every month, as new titles arrived, to a customer mailing list we kept. By late 1984, the mailing list had become an unmanageable 1200 names.

Of the titles we carried when I started running the department, Quarterflash stands out in my memory. That seemed to be a disc every new CD player buyer wanted to own (that is, if they couldn't get their hands on a copy Abbey Road). Something about that honkin' sax, I guess.

I also recall, when I was spinning records around 1979-1980 (yes, they were indeed vinyl in those days), that Ry Cooder's "Bop Til You Drop" was labeled as the first all-digital pop/rock recording ever. It would make sense, then, to think it was among the first crop of CD titles that was released when the new technology was officially introduced in 1982. (Btw, the DMP label was the first to introduce jazz recordings on CD in 1982.) However, according to one website (http://www.colba.net/~synthifi/cdchrono.htm), Billy Joel's 52nd Street was the first CD ever manufactured. It carried the CBS moniker for distribution in the US, but was made in Japan by Sony in 1982.

The first CDs manufactured in the US didn't begin hitting store shelves until 1984. (The first plant was built in Terre Haute, IN, in '84.) I don't think there was any one particular US-made title that was first. It may or may not have have been Born In The USA, but it certainly wasn't Joshua Tree. A US-made version of Wing's Greatest Hits was also released around the same time, IIRC, and McCartney had a larger following than The Boss back in those days.

Also, Sony didn't acquite CBS Records until 1988. The purchase wasn't all that surprising. CBS and Sony had had a joint-venture going in Japan since the mid-1960's, and their relationship was very good. (Columbia was considered a separate label in Japan, and had its own joint-venture with Denon until the CBS/Sony merger.)

>WJYM does get out well (anyone remember the old WMGS
>on 730 in Bowling Green...my dad used to listen to
>their country format before the switch to Jimmy

I worked there in the early 70's after Max Good got in financial problems. I was doing afternoons at WMGS, then evenings at WTUU, both a country format. Talk about concentrating on getting your air name right. I was Fred Vobbe on WTUU, and Fred Richards on WMGS. <grin> WMGS was built in an old train depot, which was moved 1/4 miles from Lime City OH. RCA four channel production board for air, (did the production after signoff), RCA-RT27 cart machines, Gates BC-1T transmitter. It was an interesting station during that time. In fact, I think I still have the jingles somewhere in my piles of tapes.

>suburbs of Cinn. (Wonder how they do in Toledo and
>Northwards, since so much of their signal goes south).

It's OK into the southern area of Toledo, but by the time you get to the Michigan line it's in the noise. In fact, I recall when CHIR was on 730, that they would cover WMGS where I lived in Toledo if Bowling Green was not off when Leamington came on.

Fred

On the radio? Morning Show? PM Drive? VO?
The National Radio Club could use your help.

Yeah, WFRO really does get out well. In fact from my position in New Haven (10 mi E of Ft wayne), they come in with about the same signal strength as 890 WLS.

Another station that does well is 940 Lima.

Source record: 19558

Fred and group,

What/where was WTUU? What is it now, if anything? In late 1975, fresh w/ my handy-dandy diploma from International Broadcasting School, I heard about openings at the old WAWR in B.G. (they became WRQN, not sure if that's what they still are). At that time they were not a Toledo move-in. They suggested I check out WMGS, and though WMGS was looking for first phones (which I didn't have at the time) the person I talked to there thought they might be able to use me. Nothing came of either place.

Jimmy Swaggart took over in '78 or so, and programmed WJYM exactly like his southern outlets, including the "Dixie Gospel Caravan". Toledo doesn't quite impress me as southern Gospel territory (though it does fine in Southern Ohio). Eventually, a few changes were made.

I'll try to get something voice-wise to you for the NRC convention. Could you get me some info on it..I understand it's Labor Day weekend in Lima? 73

=====
Brad Lovett.

Fifty bucks for a voice over? This is about as far from a union gig as you can get. I don't see William Daniels sweating this one...

>What/where was WTUU?

WTUU was WTTO in Toledo, on 1520. One of those crazy stations with (2) transmitter sites. At the time I was there, they were located on the 4th floor of the Commodore Perry Motor Inn in downtown Toledo.

WTTO became WTUU (W-15-2). After it could not overtake WTOD in the ratings, it switched to the ill-fated NBC News And Information Service and changed calls to WANR (We're All News Radio). After that failed, the station was briefly oldies, then established a religious format under the ownership of Gore Broadcasting and a call of WGOR. Later it was sold and became WVOI (Voice of inspiration), and now it's WDMN. The day site is at Jackman and Smith roads north of Toledo, and the night transmitter (which is oddly not used) is at I-75 & Buck Road, just off the US Turnpike in Perrysburg TWP.

I have a lot of memories of those days from rock to country to news to religion... then I exited for WEAQ in Eau Claire WI. <grin>

>International Broadcasting School, I heard about
>openings at the old WAWR in B.G. (they became WRQN,
>not sure if that's what they still are).

Still are. I remember WAWR too, from visiting and watching Bob Ladd do his show on the station.

>"Dixie Gospel Caravan". Toledo doesn't quite impress
>me as southern Gospel territory (though it does fine
>in Southern Ohio). Eventually, a few changes were
>made.

Toledo no, but as you go south of BG, it gets quite "south". They have a lot of listeners down here.

>I'll try to get something voice-wise to you for the
>NRC convention. Could you get me some info on it..I
>understand it's Labor Day weekend in Lima? 73

The site for all the information is http://www.nrcdxas.org/convention. Any of you V.O. guys that are out of work now have time to record us a few "welcome messages". How about it?

2006. Help with schematic ?

Newsgroup: rec.radio.broadcasting
Date: 2000-05-03 00:00:00 UTC
From: phil <phil@invest.fsbusiness.co.uk>
Message-ID: <HE4PDHABqBE5Ewtj@invest.fsbusiness.co.uk>
Source record: 19562

Just acquired an old Micro Controls, Inc. 900Mhz STL system, the tx being DOA.

I've not managed to find the Burleson, Texas company on the web and wonder if they're still in business.

The tx model number is: PRS-10C and I could really do with a service manual.

If anyone on the ng can help in any way I would very much appreciate it.

Glad to cover any costs.

Thanks.

Source record: 19564

WVOI gets out pretty well. I can get it in the South
Dayton suburbs, day and night. I've also heard the
1520 in Knox, IN from here. Amazing how closely they
packed the 1520s in Toledo, Bryan, Kent and Canton.

As for WJYM and Southern Gospel, there's a lot of
South to parts of Northwest and West Central Ohio, but
also lots of German Catholic (I went to one of the
nation's only public Catholic school--there are
several districts like that in The NW quadrant of OH).

>I distinctly remember an announcement in the show saying you could hear the
>>> program in stereo by tuning a radio to an ABC network radio station (for
>>one
>>> channel) and using the audio from the TV for the other channel.

An even stranger event happened in Boston about 1968 or '69. WGBH signed on their UHF counterpart WGBX, gining them two TV channels. For their first "stereocast" you needed two TV's, placed side by side, one tuned to each station. Not only did you have stereo audio, but you had actors and dancers moving back and forth between the two TV screens! I believe they also ran stereo audio on WGBH-FM for the simulcast. It was quite an event.

The two TV concept obviously never caught on, but the FM simulcast was quite common until the advent of stereo TV.

God, I do feel ancient....

I remember this company...repaired one of their units a long time ago.
But I don't know where to find them or their ancestors.

You might try checking with a couple of the long-time broadcast
equipment dealers such as BSW, BGS, Bradley or Geisler...maybe they
still have a file on the company and perhaps can point you to a source
for the manual.

Hello Gene.

Actually I really remember the old RCA 630 chassis fairly well.. I could probably draw a reasonably accurate schematic of it even today. Everyone copied it, and it was very good for keeping you pizza warm! :>)

Actually, I lived briefly in Cocoa Beach Florida in the later 1950's. I believe the local station (Channel 8?) from Orlando, signed on about 5 PM and signed off after the 11:00 PM news. Maybe that's what you were watching. It weather conditions were really favorable, sometimes we could pick up Jacksonville on that old RCA 630.

Now I really feel old...

i was doing breakfast, some years ago and was suffering from static shocks when i touched earthed metal. the show was littered with oohh and ahhs everytime i fired a cart off. also the discharge fired off the cart prematurely as well, which didnt sound too good !!
at about 8.45am the engineer arrived and i complained about the shocks and premature firing i was having...he laughed it off (as they do) so i said ok i'll prove it. I got him to shuffled around on the carpet for about 5 minutes (to get him good and charged up !)
I loaded the news in cart and asked him to touch the cart rack at exactly8:59:50" (the back time for the news in cart)
He did it....the cart fired on time the news fader went up, i killed the mic fader just before the worse burse of swear words i have ever heard from the engineer as he danced round the studio suffering from electric shock and bruised ego !!!
cheers all

But the original comment concerned dual-site *** AM *** stations.

Separate sites for FM backup transmitters are pretty common here in the
DC area, given the large number of stations under common ownership.
AFAIK, none of the DC-area TVs has a separate backup site.

2027. Audiovault $$$?

Newsgroup: rec.radio.broadcasting
Date: 2000-05-05 00:00:00 UTC
From: Eric Aiese <aiese@fas.harvard.edu>
Message-ID: <8ev0t6dbf1@news.fas.harvard.edu>
Source record: 19583

I was just curious here, what does it cost these days for
a straightforward Audiovault/Scott system just for cart-replacement?
I'd need a single server for 3-4 studios.

I also heard that BE was going to start selling the software
separately. Any word on this?

Thanks,
Eric

Or likewise when it was a guitar or other instrument that was out of phase. The Guess Who's "Shakin' All Over" LP had this problem. Scepter Records went to the trouble of re-recording the group in stereo, but due to the "missing guitar," the original Canadian recordings sound better. Oddly, Scepter didn't have the group re-cut the title track in stereo.

Anybody remember the "One Voice Many" LP on Columbia by the group Michaelangelo? It came out in '71, and the group's leader, Angel, was featured on the electric autoharp. Guess which instrument was mixed out of phase?

One of the tracks from that LP, "Son (We've Kept The Room Just The Way You Left It)" gained a fair amount of FM play. But on our AM carrier current campus station, it was only about "half" there.

Columbia managed to do a mono, in-phase mix for promo copies of the "It's Crying Outside" / "West" single, while the stock copies were released in stereo. Another single, the instrumental "300 Watt Music Box," was sent to radio in stereo.

CA was in NJ <cainnj@mailandnews.com> wrote:

"And this was the way that Ch2 was the only NY station left on the air after the WTC bombing."

Yep -- news reports at the time say that CBS 2 went out of its way to broadcast emergency instructions to people in the building, some of whom may have had battery-powered TVs in their offices.

"I think WNBC (4) went out by way of WLIW/21 out of Garden City Long Island for a while, and WWOR had satellite to help."

IIRC, WNBC threw up a C-band satellite feed as well on a spare transponder and phoned around to the cable operators to tell them what happened. Eastern Microwave's feed of WWOR was scrambled, and -- since the local cable systems would have been taking WWOR off air, not by satellite -- that wouldn't have been useful on such short notice unless Eastern switched it into fixed key (which they may well have done).

I have heard (from a not necessarily reliable source) that the CBS equipment on the ESB was a mistake - that an employee was supposed to cancel an automatically-renewed lease & forgot to do so.

I ran a grep on the FCC Engineering Database (old format, as of 31 Dec. 1999) for "TWO SITE" in the comments field. The results are posted on my web page. (URL in the signature) I count 47 in the U.S..

The link on KGHT-880 shows a common reason for someone to go two-site.

Somebody wrote in here several months back that mistakes had been made in
properly phasing the stereo transmissions. A rimshot wannabee-big city station
decided it would be a good idea to transmit their legal ID in stereo, but out of
phase so it couldn't be heard. Ha ha ha. Yuk yuk! The FCC, however, did
not laugh about it.

Hi Doug,

I'm not sure I get it, the reason for the location of the night time site is obvious. It is not so clear why they had to put the 50 kW daytime monster right in Little Rock? If they located it at the night site, it would be no further from the city proper than are say Chicago's 50 kW stations. Or did the day site come first, perhaps licensed to Little Rock, and then they were able to add some night service by changing the COL to Meridan. The night coverage looks like zip, and surely they can't be heard in Little Rock, I have to wonder why they even bothered with a night site at all.

Ah that FCC, what a tough and scary outfit _they_ are. By the way, an ID
(or anything else) transmitted in stereo but out of phase would be heard
almost just fine on any FM stereo radio. In fact, in would almost take a
trained ear to even tell that it was out of phase. It would sound pretty
bad on a mono FM radio or one switched to the mono mode, but, even then,
you'd still probably be able to understand the words.

The Mamas & Papas albums in the 60's were pressed out of phase. Only
the mono 45-rpm singles sounded right in mono.

I presume you mean two-site AM stations, rather than backup sites for FM
and TV. I found a very few-two site AMs without any mention in the
"Comments", but I can't turn them up to point them out at this instant.
I never found "Comments" for TV, did you?

And then there's the infamous case reported about WRHC. Formerly two
site DA-2 on 1550, got a two site DA-2 CP for 1560. Operate(d)(s) ND on
1560 without the benefit of even program test authority. Has that
stopped yet?

Not neccesarily...if the station is a rimshot, it may be weak enough in much of the area it is trying to serve to cause many car radios to blend to mono. From experience, I can tell you that the result can be a legal ID that is barely audible...

Several years back, a station in Denison, TX was running out of phase audio for several weeks -- and they were weak enough that my car radio switched to mono on this station. During this time, not only were the legal IDs barely audible, but since they were out of phase on *everything*, many of the songs they played were pretty much turned into instrumentals.

Needless to say...that station is no longer around. The have since gained a COL change and power boost, and are now a Spanish language rimshot serving Dallas-Fort Worth.

There is audio processing available that automatically corrects for out-of-phase audio by switching it into in-phase. It also corrects for the loss of a channel (after a delay to make sure it's not just part of the music) by summing the remaining channel to mono.

One local AM Stereo station uses this kind of processing. Such goof-ups don't occur that often, but when they do, the aforementioned features do a good job of correcting it.

The TV station I work for used to use a stereo synthesizer which also
included this feature.

It would occasionally "false" - believing a source was out of phase when
it wasn't - and *causing* the problem it was designed to cure.
Thankfully, we no longer use synthesized stereo.

Not sure, but the local cable company (Sammons/Morris County NJ at the time)
was running the EMI feed late that night, including the old syndie shows
they had on.

>music) by summing the remaining channel to mono.

The Howe Phase Chaser is a decent little item, however they were sold to
someone else than disappeared off the planet.

The only problem I have had with them is like any audio processor or
electronic device, you are subject to the designers view of how quick you
want it to react. Sometimes it can let something go as much as 5 seconds
before flipping the phase. I use the heck out of this for restoring old
audio recordings. It's amazing what it will fix without having to get the
"greenie" out and diddle with the playback head. <grin>

2050. Infomercial found art

Newsgroup: rec.radio.broadcasting
Date: 2000-05-07 00:00:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <39155A90.DC6@mindspring.com>
Source record: 19506

It's fairly entertaining, if you can find an AM frequency with
multiple audible stations early one Sunday morning, to listen
to vitamin informercials fade in and out over each other. A
religious station in the mix doesn't hurt the effect.

: That would sorta hard to do when the recording was made with the
: orchestra in phase and the singer out of phase.

I seem to remember the "Phase Chaser" that would do exacly what
was asked for by Kevin. If it found that the signal had more L-R
component than L+R it would flip the phase of a channel.

If the orchestra was recorded with some mono content and was out
of phase with singer I can see it flipping back and forth as the
singer started and stopped. :-)

KLUV 98.7 FM in Dallas has two transmitter sites. Its original Chalk Hill site from when it signed on as KLIF FM (later KNUS) built by the McLendons, and its primary site at the antenna farm at Cedar Hill in South Dallas which it went to in the mid 1970's. It is one of the only stations in Dallas Fort Worth with TWO sites and when they take their transmitter down at Cedar Hill for maintenance, they simply power up Chalk Hill and never go off the air.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through
Friday. This is because Pacifica will not allow us to broadcast the
Pacifica Network News over Realaudio.

2064. New idea for oldies trivia contests

Newsgroup: rec.radio.broadcasting
Date: 2000-05-08 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <8f824i$u38$1@slb7.atl.mindspring.net>
Source record: 19520

How about this as a call in contest: Name a major oldie hit, and
then ask for the Xth caller to name another hit that was in the
top 10 the same time the named hit was also in the top 10.
Refer to Billboard's lists or other well known and recognized
source.

The point is to see if people can think of concurrent hits,
to place the hits (oldies) in context to each other. What
"environment" the oldies played in when they were hits.

2065. Re: Dual transmitter sites

Newsgroup: rec.radio.broadcasting
Date: 2000-05-09 00:00:00 UTC
From: R J Carpenter <rcarpen@erols.com>
Message-ID: <3917FDB5.22D1@erols.com>
Source record: 19521

The original message on this subject concerned AM stations with separate day and night sites, **NOT** FM or TV stations with backup / auxialiary facilities at another site. In the DC/Balto area:

Two-site AM -
WWLG 1360 Baltimore is licensed for separate day and night sites. They are callen the "STA Queen" of Baltimore, and I'd guess they may have lost one of their sites. They are trying to move to 1370 21 kW, possibly day-only.

FM stations with backup at a second site -
WCSP 90.1 DC, WETA 90.9 DC, WPGC-FM 95.5 Morningside, MD (DC), WMZQ 98.7 DC, WJMO 99.5 DC, WBIG 100.3 DC, WAYZ 101.5 Waynesboro, PA, WGMS 103.5 DC, WJZW 105.9 Woodbridge, VA (DC), WJFK 106.7 Manassas, VA (DC)
These backup sites are scattered all over the area. In some cases the backup site of some stations is the main site of others.

Thats true. Also, if you lost one channel, it would take the other channel and fill the dead channel with the audio till the channel came back. I always thought it was a great idea and a useful piece of equipment. Why it did not stay is beyond me.

You answered your own questions. We had one at the station for
about a week. You could hear it working. Which was the problem for
an audiophile engineer. If teh signal had more L-R than the phase
chaser appreciated, it would play havoc with the mono compatibility.
A good idea, but poorly executed.

2068. re: Dual Transmitter Sites/KLUV-FM

Newsgroup: rec.radio.broadcasting
Date: 2000-05-09 00:00:00 UTC
From: wallyw26@airmail.net
Message-ID: <mS/12pAnR-0008EbS@mail.airmail.net>
Source record: 19524

Steve5 was correct in saying that KLUV-FM had two transmitter sites. The Chalk Hill Site was taken out of service last summer when Infinity moved several of their FM's to a new tower constructed at
Cedar Hill. I don't know if they have a separate backup at Cedar Hill.

And at the risk of beating this dead horse into the ground again, KLUV-AM also has two transmitter sites, for night and for day.

WFAA-TV has two sites also, both at Cedar Hill. The original is the 1950's Candelabra (or what's left of it after the plane clipped the tower a decade ago) and the new tower, which is shared with KDFW-TV and also hosts both station's HDTV facilities. The original site is now somewhat reduced in height and serves as a backup for both Channels 8 and 4.

2069. Adventure in the Yukon

Newsgroup: rec.radio.broadcasting
Date: 2000-05-09 00:00:00 UTC
From: Rob Hopkins <rhopkins@polarcom.com>
Message-ID: <shgfrapf6e511@corp.supernews.com>
Source record: 19525

Gold rush of 1898 almost over. 22 Hours of daylight. All the grizzled bear you can eat.

Remote Rural broadcaster located in talented, laid back community has short and long term position(s) available. Seeking people really keen to get on air, share experiences and have wide and eclectic tastes in music and culture.

Age, Race, Gender not important, just the willingness to have fun with radio

Anyone heading North this summer for an adventure?

See Ya!

2070. Scandinavian Weekend Radio, Finland's FIRST private shortwave station!

Newsgroup: rec.radio.broadcasting
Date: 2000-05-09 00:00:00 UTC
From: Ville-Veikko Haikarainen <v-v.haikarainen@swradio.net>
Message-ID: <8f9hsitme1@mordred.cc.jyu.fi>
Source record: 19526

As the power behind the scenes of the Scandinavian Weekend Radio (SWR), is the Scandinavian Shortwave Radio Association. The purpose of SSRA is to promote and to support the non-commercial radio broadcasting in Finland. The operation of the radio station is independent of the Oy Finnish Broadcasting Company Ab, of home and foreign radio chains, other radio stations and advertisers.

The fixed studios and transmitter equipment are placed on Virrat, western Finland. SWR can be heard on the 25 meters frequency band shortwaves, on frequency 11690 or 11720 kHz. We will be on the air at the first Saturday of every month at 0:00 - 23:59 local time (+2 UTC). If our license is granted in time, the first transmission is held 1st of July 2000.

Our reception area will cover the Nordic countries and the area around the Baltic Sea. Because of the INTERNATIONAL character of our station, also English and Swedish are used in addition to the Finnish as the languages of our radio programmes. The reception area of the station also brings a possibility to make Finnish music known to our foreign listeners. For this reason more than half of the music played will be domestic.

Our purpose is to function as the radio enthusiasts' report channel, to support, and to promote the radio hobby. We report in the news events of the radio world and information such as for example the activity of the sun, which greatly affect in distant radio reception.

More information about SWR can be found in our website:
http://www.swradio.net or by e-mail: info@swradio.net

Bob, your post sure brings back memories of my stint at CFLA-TV/8, Goose Bay, Labrador back in the '60's. I really gained valuable experience there which still pays off presently. Small stations in the boonies, as we used to call them, really provide great experience. Well, as you are probably aware by now, I am not applying for a job. I certainly am interested in your radio station and I'd appreciate information on CFWH-TV. According to the listing in the Broadcasting/Cable Yearbook, it's facilities sound comparable to CFLA's.

Message-ID: <3.0.3.32.20000510220155.006d5cb4@nrcdxas.org>
Source record: 19531

For those of you that do voice over for a living, please take a look at http://www.nrcdxas.org/convention/liners.html as I'm looking for some "welcome messages" for this year's National Radio Club Convention.

The convention is going to be held over Labor Day weekend, however I would like to get liners in by mid July. At this year's convention we will have a demo station using an automation system and carrier current transmitter. The purpose of this is to show people attending how computer automation works, and then allow them to tweak the processing and sample various radios under test conditions.

The liners are put in rotation with other folk's work, and scheduled between oldies music. Last year we had the demo station and conventioneers loved it.

So if you can help out by saying a few words, check out the web site for a script. Feel free to modify any of the working. If you know others in the business, especially morning and PM drive talent on stations, please invite them to submit. The more the better. The people listening are the folks that listen and enjoy radio as much as we all do!

> "environment" the oldies played in when they were hits.

This would work with those who were actually around and followed the top 10 at that time, but there's a big risk that the caller might mention a hit that isn't on the industry's "safe 400" list. Stations don't want their listeners to realize how limited the playlists are.

On a side note, an oldies atation had a contest where they would call someone at random and ask whoever answers what their favorite radio station is. If the answer is right, the person gets a prize and is eligible for the next contest: mention a title that was played in the past hour. Answering with "The Shoop-Shoop Song" or "It's Too Late to Turn Back Now" increases the odds of winning at any time!

2077. Need to connect 25 Hz Automation Decoder to MX5050-BII

Newsgroup: rec.radio.broadcasting
Date: 2000-05-11 00:00:00 UTC
From: robbass2@aol.com
Message-ID: <20000511045824.23667.00002115@ng-ce1.aol.com>
Source record: 19533

I have an old BE TG-2A 25 Hz tone encoder/decoder that I would like to interface with an Otari MX5050-BII. The TG-2A uses a barrier strip connection and sends a contact closure via a two terminal connection (Hot and Ground).

Problem is, these Otari machines use a different remote control connector from most analog tape decks. I assume I'll need some sort of relay? Can anyone out there build one of these things?

Thanks!

2078. Transcription discs

Newsgroup: rec.radio.broadcasting
Date: 2000-05-11 00:00:00 UTC
From: Eric Aiese <aiese@fas.harvard.edu>
Message-ID: <8fedga$5cc$1@news.fas.harvard.edu>
Source record: 19534

I was at a record store yesterday, and they had a bunch of old 16" radio discs. They had about 14" on each side, pressed at 33 1/3, and that appeared to fill up the whole side.

Is there a reason they didn't just use a 12" LP for those shows? I always assumed the benefit to 16" was more programming. Did they always limit it to ~15 minutes?

Eric

2079. Re: Transcription discs

Newsgroup: rec.radio.broadcasting
Date: 2000-05-11 00:00:00 UTC
From: "Donald D. Forsling" <ddforsling@uswest.net>
Message-ID: <0oBS4.83$cZ3.12099@news.uswest.net>
Source record: 19535

Remember, at the time these discs were used, 33 1/3 rpm record and playback speed was common in the broadcast industry but not yet so common in the consumer market because the long-play record was just comming into its own. Microgroove (LP) recording was not yet a standard in the broadcast industry. So, to get fifteen minutes on a aide for broadcast use, the 16" disc was standard--certainly in the late 1940's and still in 1952 when I started in radio.

Our turntables in those days were huge RCA's with a very heavy platter on top that had the gear shift (allowing change between 78 and 33 1/3) built into the rim of the platter. The motor was big enough to run a band saw and sat on the floor of the cabinet. It was connected to the platter via a roughly 3-foot long drive shaft and transmission.

There were two rotary knobs on the top of the cabinets. One was for on and off, one for for equalization and for switching between the horizontal and vertical mode, i.e., for playback of either discs cut with "side-to-side" grooves or discs cut with "hill and-dale" grooves. Almost all material that came into the station featured the horizontal cut, but at least one major transcription service, WORLD, use the vertical system.

Does anybody remember the RCA model number for these beasts?

In about 1954, RCA came out with a 45 rpm modification kit for these devils.. It involved adding a second lightweight arm with a microgroove capable head to the top of the turntable and a bunch of stuff that went in below decks to allow a speed shift in and out of 45 rpm.

On, before I forget, you might be interested in knowing that most stations had their own disc cutting equipment in house and had the choice of putting the audio on disc from the inside to the outside or vice versa. It just depended on which screw you had in the lath. The discs were made of aluminum covered with a layer of, I think, nitrate that was cut to make the recording.

I do remember that the nitrate shavings left over from a cutting session really flared when you tossed a match into a coffee can full of them.

We have worked out our "graduated payment plan" whereby, the sooner payment is received (in order to prevent the last minute "backlog") the lower the charge will be. This will be a big improvement for all of us. It'll get YOU lower rates and (hopefully) it'll get us a more evenly distributed workload. For more information, look on our "rates" page at http://hawkfm.tripod.com

This question is harder to answer by the day given the boneheaded moves their stations seem to be making on a daily basis.

Recent screw-ups at ABC-owned stations in NYC, LA, SF, Chicago and Dallas really make you wonder what is going on inside Mickey's house.

-- WABC: Curtis Sliwa in morning drive? Are they smoking dope? I would love to sit in on the meetings where they come up with ideas like this! That's the tip of the iceberg at WABC.

-- KABC: Why not shut down the transmitter and save electricity? Could the station be saved in someone else's hands? Yes, but as long as it's owned by ABC, they will just keep firing managers in the hopes that someday that will stop the ratings slide down to 0.0.

-- WLS: What was wrong with Mike Malloy? It certainly wasn't his ratings which were quite good.

-- WBAP: Where to begin... Afternoon news is bumped for a host who lasts nine months. Why was he there in the first place? How long will the new host last? Three? Also, Mark Davis rails on Clinton over Monicagate then the local media reports he's been cheating on his wife, who has a serious illness. He even apparently takes his young child to the mall with the other woman. Listeners spot him there and wonder. Station pretends nothing has happened and Davis dumps callers that ask him about it.... Deadly twister tears apart downtown Fort Worth, but hockey game is more important.

-- KSFO: Good ratings move to bring Rush from KNBR, but dumb decisions regarding local programming will undermine this. Worst move- hiring the hopeless Brian Wilson as an evening host.

How do ABC Radio's top managers keep their jobs?

Hello Everyone,

I hope all of you were as exceited as I was when I discovered this
morning in my mailbox, the latest edition of the Memory Lane show on
Rock-it Radio. It is actually Part 8 of the very popular series of
Forgotten top 20's.
This show features superstars and one-hit wonders, and deomnstrates
the wonderful variety of tunes that were played on Top
40 radio during that era.
Listen for an exclusive MEMORY LANE SHOW medlye of three different
versions of the same forgotten top twenty tune!
Here is the playlist of Rock-it Radio show #165.

Forgotten Top Twenties #8.

1. Shout- Joey Dee and the Starlighters (#6-1962)
2. Crossfire- The Orlons (#19- 1963)
3. Problems- Everly Brothers (#2-1959)
4. I Count the tears - The Drifters (#17-1961)
5. Ring of Fire- Johnny Cash (#17- 1961)
6. Goodbye, Jimmy, Goodbye- Kathy LInden (#11- 1959)
7. Rip it up- Little Richard (#17- 1956)
8. It was I- Skip and Flip (#11- 1959)
9. Chains- Bobby Vee (#13- 1963)
10. The Boy next door- The Secrets (#18- 1963)
11. Come into my heart- LLoyd Price (#20- 1959)
12. Boom Boom Boomerang- The DeCastro Sisters (#17- 1955)
13. School is out- Gray U.S. Bonds (#5- 1961)
14. Gonna find me a bluebird- Marvin Rainwater (#18-1957)
15. I like it like that (Parts 1 & 2)- Chris Kenner (#2-1961)
16. What will my Mary say- Johnny Mathis (#9- 1963)
17. Let the Four Winds Blow- Fats Domino (#15- 1961)
18. Midnight Mary- Joey Powers (#10- 1963)
19. My Bucket's got a hole in it- Ricky Nelson (#12- 1958)
20. I'll come Running back to you- Sam Cooke (#18- 1958)
21. Crazy Love- Paul Anka (#15- 1958)
22. My Baby- The Temptations (#13- 1965)
23. Jennie Lee- Jan & Arnie (#8- 1958)
24. Hearts of Stone- The Charms (#15- 1955)/ The Fontane sisters

(#1-1955)/Bill Black's Combo (#20- 1961)
25. Hey Little Cobra- Rip Chords (#4- 1964)
26. I'll never dance again- Bobby Rydell (#14- 1962)
27. I'm stickin' with you- Jimmy Bowen & Rhythm Orchids (#14- 1957)
28. Are you sincere?- Andy Williams (#3- 1958)
29. Little Devil- Neil Sedaka (#11- 1961)
30. All in my mind- Maxine Brown (#19- 1961)
31. Cannonball - Duane Eddy (#15- 1958)
32. Four Walls- Jim Reeves (#11- 1957)

And to tune into this great show all you have to do is go to our
archives website at
http://www.palmsradio.com/rockittext.htm

anc click to show #165! Of course you need real player and if you don't
have that yet -- well you can download that for free at
http://www.real.com

~~~~~~

Congratulations to our latest
Contest Winners

The latest Rock-it Radio listeners club giveaway were more Rock-it
Radio T-shirts with the Rock-it Radio logo on them. Our last contest
question that came with the last newsletter was .....
What High School did Ritchie Valens attend in Southern California.
The First three members of the Rock-it radio listeners club that
e mailed in the correct answer would win a Rock-it Radio t shirt..
Well Congratulations to:
1. Jorge Correa - Canary Islands, Spain
2. Al Smith - Brampton, Ontario, Canada
3. Christina Zarate- Oxnard, California USA

These are the three first people to send us the correct answer which was
Pacoima High, out in the San Fernando Valley about 60 Km. from here in
Ventura. We will be shipping all of your t shirts out to you folks this
weekend! And thanks to all who take part in these contests.

~~~~~~

Don't forget to send in your requests and dedications to Rock-it Radio and
we hope that you enjoy this show!

All the Rockin' best,

Bennie Dingo
Rock-it Radio

2092. Tuning FM in 200KHz steps

Newsgroup: rec.radio.broadcasting
Date: 2000-05-12 00:00:00 UTC
From: info@fanfare.com
Message-ID: <391f1476.4187974@mail.globility.com>
Source record: 19454

Hi:

I understand there has been discussion on the convenience offered (or not offered, as the case may be) in tuning increments.

There are two minds on this subject. One wants resolution and the other wants speed. Both factions are correct in their assumption that these features should be available. It's just that proponents of speed have not been as vocal as those who would subordinate speed to having the ability to 'fine-tune'. However, I realize that 50KHz increments and the term 'fine-tune' are somewhat contradictory, therefore, please allow me to tell you how the Fanfare FT-1A tunes.

Once a frequency has been tuned, the tuning microprocessor generates a precise voltage for the varactors and tune is established. However, because analog tuners are notorious for their voltage sensitivities, we had to do better than the competition (who says you must wait the 15 minutes or more while their tuner warms up).

In the FT-1A there is also a frequency generator which compares the frequency tuned with the frequency established by the varactor. If there is any difference at all, the PLL generates a correction which moves the L.O. to where there is no error. Voila, precise tuning right from the time the FT-1A is plugged in. And with the FT-1A's "Return to last state" feature, which brings the unit back to the last state it was in prior to a power failure, precise tuning is immediate.

Why pushbutton UP/DOWN tuning instead of a pot.? Well, resolution is based on the turns ratio of the pot.. Most have a 10 turn pot. which balances speed with resolution. However, to get better than 25KHz resolution, you'd have to spin the heck out of a 20-turn pot. That may make sense to some high resolution types, but certainly not to those who are advocates of speedy tuning.

Why analog .... because it has proven to provide, on high resolution audio systems, an appreciably better sound than does the typical frequency synthesized tuner. You can argue that until the cows come home but I'll bet each of you has at least one piece of equipment in your system that provides better sound than its competition. Nuff said.

BTW, just so you know we listen, and if we agree with what we hear, we act. As a result, a software selectable, dual tuning system with 200/50KHz steps is being seriously considered for the next incarnation(next year).

If anyone has any questions or comments about Fanfare FM tuner/monitors, please feel free.

Regards,

Marv Southcott
President

The same reason you don't see reputable national accounts (including the "promotional consideration" fee plugs) on "Jerry Springer"--they don't want to be on anything that's controversial. They're very happy to be on music formats or even all-news formats, but not on issue-oriented talk stations.

That's what Limbaugh said after the Imus Correspondents' Dinner Speech.

Despite the best efforts of mutual friends of both Imus and Limbaugh, Rush hates Imus,
not understanding the Imus parodies of him; which, as Imus says, is because
Rush is stupid, adding another wedge.

Imus's parodies of Rush are of bigger-than-lifeness, not racism.
Bigger-than-life this, is the message. Rush misreads it.

As Imus says, he's stupid.

All it would take to flip Imus is a call from Rush saying some of his stuff
is pretty good.

This would be a two-hour bit with McCord, Bernie & Lou taking the position of
the old Imus, and Imus looking at it anew; fundamentally the only moral position,
but played for laughs.

That may make sense to some high resolution types, but certainly not to those who are advocates of speedy tuning."

Not to mention the fact that customers these days expect "digital" tuning (meaning pushbuttons, presets and direct readout) on anything from a cheapie Dolby Pro-Logic receiver on up.

"BTW, just so you know we listen, and if we agree with what we hear, we act. As a result, a software selectable, dual tuning system with 200/50KHz steps is being seriously considered for the next incarnation(next year)."

Sounds good to me. One way to do it would be to gang the step selection with the wide/narrow bandwidth selection, so the tuner would step 200 kHz when the wide bandpass is selected and 50 kHz in narrow mode, which would be necessary anyway in most situations where fine tuning is desired. The one exception would be that the tuner would stay on the tuned frequency when switching from narrow back to wide -- it wouldn't jump to the nearest 200 kHz step.

(Just hope I'll be able to afford one of these babies next year! :-)

2106. Questions Regarding Music On Hard Drive

Newsgroup: rec.radio.broadcasting
Date: 2000-05-12 00:00:00 UTC
From: robbass2@aol.com
Message-ID: <20000512023758.19283.00002052@ng-fv1.aol.com>
Source record: 19550

I have some questions regarding music-on-hard-drive systems that I am hoping some of you can help me with. I'm familiar with how to get the Arrakis Digilink to work with music on hard drive, as it merely involves recording the songs in real time and then setting crossover points for song segues (i.e. 03.0 seconds for most songs, and 01.0 seconds for songs with :00 intros and cold endings).

The problem with that procedure is that the song overlaps are not consistant. Songs with a start crossover time of 01.0 seconds won't start until the previous song's ending crossover hits 01.0 seconds, even if it is set to end at 03.0 seconds.

How do some of these other systems such as Scott Studios AXS handle this? Does this, or any other system similar, allow you to say the song is 3:31 and it segues by time? I know CD Automation programs work like this, but how about hard drive storage?

Thanks for any info!

> --

Currently, tuning is MUCH faster on the FT-1a, than the FT-1. By
the time the FT-1 has tuned from the top of the band to 101 Mhz, the
FT-1a has scanned the entire band and started again from the top.
Roughly 3 times faster.
This permits quick searching, quick finding of frequencies
without backing up. Any faster and you'd lose your speed advantage
by overshooting.

And to borrow a phrase from RAB, if sound is your business, the
FT-1a doesn't Cost...it PAYS.

A post a day or two ago (can't seem to put my finger on it at the moment...) mentioned someting about a new format called "Americana" -- this seems to be something along the lines of the 00's version of the MOR format of years gone by; possible?
Anyway...does anyone know if anybody migt be netcasting a sample of this format?
Thanks!
--Ken>>

Actually, Americana is more a spinoff of country. The Americana charts are full of "alt.country" (not a Usenet newsgroup, just a genre designation) acts like Robert Earl Keen, Lucinda Williams and the like, as well as bits of bluegrass and Cajun music.

Try KHYI, Plano, Texas at http://www.khyi.com for a Texas-style variation of the format, at least during daylight hours local time. They use bird-fed "Real Country" programming nights.

First, it's not Curtis Sliwa in the morning, it's Curtis Sliwa and Ron Kuby - they've been paired up for a while now and are quite entertaining.

Also, it's not the first time Curtis Sliwa was 1/2 of the morning duo on WABC, he and his former wife held that spot in the early to mid 90's - and they were also pretty entertaining. So what's the big deal? Curtis is a workhorse at WABC.

I respect him for walking in off the street (literally) and making a radio star of himself.

A question for stations that use hard drive for most/all of their programming (i.e. Music and Spots). What kind of backup system do you use?

I work for a station that just lost the primary SCSI Drive and the only backups we had were partial. Any of the files that were backed up, are on DAT. The rest of the files that were not, are gone. How can we prevent a similar loss in the future, quickly? Zip Drives?

Thanks

Rob Andrews

>>

>Why it did not stay is beyond me.

In the age of digital operations (no carts), phase chasing is needed much
less frequently. In the cart days, everyone (agency, productions, etc.) might
have done their work correctly (and all equipment might be adjusted correctly),
but you could still have phase problems. Often, a cart could be in the process
of crashing and burning, and phase problems would appear. Of course, as stated
previously, phase chasers operated less than beautifully... so they were a much
les than perfect solution. Now, production would generally have to have failed
to catch a problem to have a phase error (crap in/crap out).

>thousands of times.

I might add that stanton cartridges with the 78 tips work well for me.
as for getting around the 16 inch issue, there are turntables out
there still manufactured for 16 inch use, for the collector. last I
saw one, they ran around $300-400 US for a belt driven machine. I'm
sorry I don't have a web site, but you might do some searching for the
some audiophile web sites for links to sellers.

one issue that some hard core collectors may address, is playback EQ.
most of those discs had varying standards depending on manufacturer,
as opposed to the universal RIAA standard adopted by LP manufacturers
in 1955. while most of the discs play fine through a preamp with a
RIAA curve, those 'hard core" people, and those with money, usually
prefer to use a non RIAA preamp costing 100's. very useful for 'hill
and dale" cut discs, as often the info is out of phase with the
cartridge audio, well, it's been my experience anyways.

I would be interested in obtaining info regarding the various playback
EQ settings used with transcripts, like RCA's orthacoustic curve. all
I have heard was that it was similar to the latter RIAA Lp curve, but
would like specific info, as i have a number of transcription discs.

Keep in mind that a lot of them have "no storage" rules to prevent such
things. If they look and see you aren't linking, but are just storing stuff
there, they'll yank them.

[puts on the system manager hat, climbs soapbox]

The -best- solution is to used mirrored or RAID disks. This will minimize
failure. You can't eliminate it, of course. Follow that with backing up ALL
of the files. If you're paranoid, do this every day. Automate it, and make
tape changing part of someone's routine, like transmitter readings or
sign-on/off. When managements gripes about the cost, ask them what being off
the air costs...

If you can't get mirrored or RAID drives, attach another scsi drive and copy
everything from the running drive to the additional drive. Do this often.
If the first one fails, you're only back to the last copy.

(One of my gripes with most packaged systems is that they usually put
everything on one drive, often in the same partition. This is, IMHO, stupid.
It's far better to separate the rapidly changing data from the seldom
changing data (ie, programs on one drive, audio files/etc on another). This
makes backup management much easier.)

For reference, we just installed a Dell NT server. It has mirrored boot
drives, with 2 partitions (1 for NT, one for programs). It also has an
array of 7 data drives, in a RAID5 set with hot spare. Any drive in the
system can die completely, and we're still on-line w/o disruption. Multiple
power supplies, too. We're using CAI's ArcServe backup software to an HP
DLT tape drive. With ArcServe's disaster recovery software, we can rebuild
the system from three floppies and the backup tapes.

[climbs down, hat blown away in the wind]

OTOH, if all else fails, a zip drive will do in a pinch...

buy a drive same size as the one you use copy everything to it once or
twice a month and before holiday weekends and take it home with you.

this will survive fire flood and famine lightning and power blips.

>There are web sites offering gigabytes of free hard drive space as an incentive to visit their sites. I am considering using one of them for the major part of my non-sensitive back-up.<

Think again. Your station has spent thousands of dollars for an automation system to run the entire place, and yet you would trust its backups to the Internet. All it takes is one hacker, who is absolutely determined to break your password and succeeds, to completely toast your backups.

If the events of the past two weeks (the ILOVEYOU worm) have taught us anything at all, it's that the Internet is still unreliable to a fairly high degree.

Critical data backups belong on either redundant (i.e., mirrored or RAID hard drives) or removable (i.e., tape) media....or both (i.e., removable hard drives). Even then, backups need to be tested at a time when you don't need them. Doing it while you're in a panic because of a crash, and finding out they don't work, does you no good at all.

Also, be sure that those backups are stored off-site. If you come to work one morning, and find a crater where your building was, keeping your backups in the office, studio or server room will not have done you any good.

Rob Andrews wrote: > A question for stations that use hard drive for most/all of their programming > (i.e. Music and Spots). What kind of backup system do you use?>>

I do production for a group of radio stations. Three out of the five stations are on the Scott System and once a week I burn a backup CD-R of all of the spots that were added the previous week. The spots are saved as data files, not audio files. I then delete those spots from the main server (the spots are still on the nodes for the individual stations).

I can't tell you what a time saver this has been for me. When I get an order to run some spots that are already in house and have already played on one of the stations I don't have to re-dub them, I just pull out the production order from the last time the spot played, find the right CD-R with the spot's data file and then it's just a matter of clicking and dragging and changing the flight dates.

I save hours and hours of work each month this way. It keeps my server nice and tidy, making it much easier to keep things running smoothly.

2126. KC Area Radio News

Newsgroup: rec.radio.broadcasting
Date: 2000-05-15 00:00:00 UTC
From: Richie Kennedy <route56@route56.com>
Message-ID: <39205EBA.2F617401@route56.com>
Source record: 19482

I haven't heard anyone talk about radio in the KC area as of late, so....

ENTERCOM SPIN-OFF: In the Entercom/Sinclair Purchase deal, Entercom has announced that the spin-offs have a definite home: Susquehanna radio has agreed to buy KCMO, KCMO-FM, and KCFX from Entercom. In addition, DOJ has ruled that Entercom cannot strip the Cheifs rights from "The Fox," which means Susquehanna will get that in the package. I'm not certain why DOJ has ruled the way they have, but it's either 1) a group can't buy a station for it's sports broadcasting rights, then sell the rest of the station off or 2) the Cheifs would bring it over 40% revenue

LAZER DOING OK: Larryville.com sort of overhyped KLZR's ratings slip recently. KLZR slipped from a 5.8 to a 3.6 in Topeka, and dropped below 1.0 in KC after the Zimmer station flipped from Modern Rock to CHR. Larryville readers felt this ratings were indicitive of its "home" market. Not true, according to Hank Booth, GM of KLZR and sister KLWN. HB went onto Larryville and said that a third party survey showed increased listernship. Hank also mentioned that ad revenue is up higher than expected, which is certainally a good sign. HB also felt the flip allowed them to become more involved in the community in ways that would be untouchable under Modern Rock.

If there's anything that proves that advertisers are responding positively, how about the fact that morning man Austin Michael did *three* remotes on Saturday. Two of them were in Ottawa (is anyone from KCHZ listening :)

WEATHER COVERAGE: I don't normally flip between channels to determine weather info, but WIBW-TV in Topeka did their normal coverage of severe weather when it struck northern Shawnee county. WIBW and WIBW-FM broke simulcasted the TV (the radio and TV are under seperate ownerships now). KLZR also relayed reports from the NWS *and* activated the warning beeps (The beeps are normally reserved for Douglas county only, according to Station Manager Bob Newton, but HB ordered the beeps) Newton, who is also a spotter with Douglas County EOC, also recruited a few volenteers to watch the sky, even though the storm did not enter Douglas County

R.P.K.
When the storm hits, I'll be in the basement with scanner and radio in hand.

True story...when my first employer's building burnt to the ground in
1990, we had "off-site backups" of our production music and our main
"station theme"... on a cassette tape which had fallen into the back
seat floor of my car.

Heh.

WNIR(FM), Kent-Akron, OH...which has been talk for over 25 years now
and hasn't ever lit a stereo pilot to the best of my knowledge, even
when they were playing music between dates on their now-dead "Dating
Show" at night...

One other side question here...do "FM Talkers" like KLSX/LA, WNEW/NY,
WJFK/DC and WKRK/Detroit keep the stereo pilot on?

WJFK-FM, 106.7 Manassas, VA, is stereo.

WCSP, 90.1 Washington, DC, is mono - C-Span radio

WTOP-FM, 107.7 Warrenton, VA, is emphatically mono. They turned off the stereo the instant they took over 107.7, and did the same for the short time they were on 94.3 instead. They are all-news, not "talk", although their overnight program has musical bridges [that have driven me away].

Not surprising - don't they still run some music programs on weekends?
I'm curious if the new-style FM talkers that don't run music programs
at all keep the stereo on...or, say, if WJFK does during its talk
shows.

WJFK isn't my kind of station, so I don't follow their every minute.
IIRC, when I tuned to check them they were talking w/ the stereo on.

Ahhh not entirely correct, Wally.

KLUV-FM mains site was on the Miller (now the Milton) tower at
Cedar Hill...Chalk Hill was the 1st AUX site..

NOW their new main site is on Cowboy Tower (less than
1500ft to the east of the old main site); Milton is now an aux
(#1) and Chalk Hill is still an aux (#2)...

Talk to Bill Taylor at KLUV...He's the Chief Egr...
KLUV AM (the original KLIF back in the Top40 days) is being sold to
Radio One...btw

Chris
WB5ITT
Chief Engineer
Clear Channel Dallas
KDMX Mix 102.9 and KEGL 97.1 The Eagle

PS KEGL is also on Cowboy tower along with KVIL...NO other Infinity
station is on Cowboy...they are on the Cedar Tower..100.3/105.3 and
107.5 are there...and KDMX's AUX is on WFAA's AUX tower.

wallyw26@airmail.net wrote:

Nope...a lot of us have AUX sites..

KDMX, KEGL (My stations) KVIL (though their AUX antenna is almost
dead), KLUV (now with 2 AUX sites), KHKS 106.1, KTXQ, 100.3, 105.3
107.5, and on and on....It is rare for a Dallas Ft Worth FM NOW to NOT
have a backup (especially after the CH 39 tower crash 3+ years ago
that TOOK 100.3/105.3 and 107.5 off the air for a while!)

Chris
Chief Egr
KDMX / KEGL
and yes both of my stations have backups...thank goodness! :)

KFEZ (1340, KCK) has been bought and has got a new format of
Christian-oriented CHR. According to sources, the new owners have also
bought KCKN (currently at 1020 in Roswell, NM) and may be moving *those*
calls back to their old home in KCK (where they lived from 11/26/36
[then at 1310] to 1981). Supposedly, 1340 is already using the KCKN
name for presumably all but legal ID's.

R.P.K.
This may be interesting development.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their

own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

At the time there 16 inch discs were released there was no technology
for a microgrove that would allow 15 min on a 12 disc with good
quality. In 1948 the microgroove disc became available. About 1952 yhr
16 disc started to fade.

2151. Job opening -- WILL-AM-FM Traffic Manager

Newsgroup: rec.radio.broadcasting
Date: 2000-05-18 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <39243009.44598685@news.cso.uiuc.edu>
Source record: 19407
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

Broadcast Research Operations Specialist
TRAFFIC MANAGER
WILL-AM/FM, Division of Broadcasting
University of Illinois at Urbana-Champaign

STATIONS: WILL-AM&FM are the radio stations of the University of Illinois, located in Urbana-Champaign. WILL-AM is a 5,000 watt station that serves much of Illinois and western Indiana with a news and information format. WILL-FM is a 105,000 watt station that serves east central Illinois with predominantly classical music programming. AM has been on the air since 1922, FM since 1941. The stations broadcast 24 hours a day, are licensed to the University of Illinois and have a strong regional presence. WILL has recently moved into new facilities in Campbell Hall on the University campus.

LOCATION: The University of Illinois is located in Urbana-Champaign, 135 miles south of Chicago, 180 miles northeast of St. Louis, 120 miles west of Indianapolis. The University setting (37,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreational facilities. Local schools, libraries, and shopping areas are excellent.

POSITION: This is a full-time academic-professional position. The Traffic Manager is a member of the WILL Radio management team and reports directly to the Radio Manager. The Traffic Manager supervises broadcast traffic operations of the radio stations and works closely with the AM and FM program directors, the operations supervisor and the corporate support staff.

RESPONSIBILITIES: The person in this position:

Works with program directors and the operations supervisor, as a member of the programming team, to anticipate and solve problems related to traffic, operations and programming. Specifically, reviews operations reports, corrects traffic/operations problems and/or forwards reports to appropriate department. Maintains files of these reports.

Collects programming requests from program directors, produces a daily recording service schedule and updates it as needed. Schedules refeeds and makegood feeds.

Works with program directors to organize recorded programs based on their intended use for delayed broadcast or archival storage.

Prepares daily program schedule, including all program times and source information, underwriting, promotion, fundraising announcements and other spots as needed. Updates schedule with last-minute changes. Gets underwriting announcements recorded, proofs copy as needed, and prepares underwriting log and proof of performance reports as requested.

Reviews messages on the Direct Access Communication System (DACS) from National Public Radio, forwards messages and other program materials to appropriate department.

Assists in the development of station-wide systems appropriate to a newly-acquired computer-based audio platform and new audio recording technology and media.

Writes promotional copy for programs as requested.

Tracks use of tapes and discs and orders stock as needed. Labels tapes and discs for taping/broadcast as needed. Arranges for replacements of impaired programs; has copies of programs made when requested by other stations.

Supervises a half-time assistant and is responsible for the accurate and timely performance of that assistant in areas such as tape check-in and delivery to master control, tape return to sources, and keeping records of designated program tapes and discs.

DESIRED QUALIFICATIONS: A baccalaureate degree is required. The ability to work as a member of the programming team to anticipate and solve problems in traffic, operations and programming is required. The ability to handle large amounts of detailed information, and the ability to organize and manipulate that information with few errors, is essential. Full understanding of broadcast system operations and satellite program delivery systems must be demonstrated. Some familiarity with computer-based audio networks and traffic software programs, and some experience in traffic and operations in a public radio setting, is desirable. Ability and experience in writing promotional copy is also desirable.

SALARY AND BENEFITS: Salary commensurate with experience. Excellent benefits: Twenty-four days paid vacation annually, paid health insurance, paid life insurance, sick and disability leave, university retirement system, and other benefits.

TO APPLY: Send a complete resume with a cover letter and the name, address, and phone number of three professional references to the address below. Receipt of application will be acknowledged. In order to receive full consideration, applications must be received by June 15, 2000. Start date July 10, 2000.

Dan Simeone, Station Manager
WILL-AM-FM
Campbell Hall for Public Telecommunication
300 North Goodwin Avenue, Urbana, IL 61801-2316, (217) 333-0850

The University of Illinois is an Affirmative Action/Equal Opportunity Employer.

They are now calling themselves "The Range" instead of Y-95 -- the call
letters are unchanged though (KHYI)

I'm looking for a schematic for a product of RCA Manufacturing that's proving elusive. I need a diagram for an RCA Victor model MI-12701 disc cutting lathe. The tube compliment is a 5Y4, a 6F6, and 2 6J7's, and there is no radio tuner. Just a simple disc cutting lathe. Does anyone have or know where I could track down this schematic? I don't have access to RCA service manuals, and it isn't in Riders for Sams.

Thanks!

16 rpm turntable anecdote (parental warning: this is in bad taste).

At an A/C / Top 40 combo in Birmingham, the evening talent on the A/C was a former TV kid's show host, and could be described as "wholesome." His shift included reading the hourly news as well as jocking the records.

In the normally unlit rack room facing the air studio glass, there was a console from long-gone board operator days along with two RCA turntables with the big platters able to spin 16 rpm electrical transcriptions. These were powered by motors well capable of running a washing machine! Of an evening, the rock jock from down the hall hired a dancer from a saloon down the street to disrobe and stand on the turntable. As the AM host began to read the news, the turntable started and the light in the room went on, displaying the rotating lassie. The result, as can be imagined, was a lot of dead air, misread news and gagging.

interesting....I have a nice amount of NBC Thesaurus music library
discs....they are scratched to hell, but still neat to have...both
canadian and US pressings..

as for world stuff, I have what I believe to be most of not all of a
world series called "soldiers of the press" which, based on a book I
found (i forget the title) in a book store on vintage radio shows, was
in syndication from 1942 to 1945. most in beautiful shape, hell, a
couple still have the return address label.....

I think I'll hold onto these...not to mention my 5 minute star shows
from 1943 with hollywood movie stars plugging to canadians to buy war
bonds....some canadian was the host of the series.....I wonder what
happened to him......his name was Lorne Greene......

hahahahahahahaha

SD!

2158. Unattended recording studio ??

Newsgroup: rec.radio.broadcasting
Date: 2000-05-22 00:00:00 UTC
From: Jeremy <jeremy.fogg@uwe.ac.uk>
Message-ID: <FuyEDL.FrK@bath.ac.uk>
Source record: 19414

Guys and gals,

I work in a languages Faculty.

I have to set up an unattended semi-pro recording studio where a simple button press or even a foot fall on a pressure mat triggers a PC containing a Creative Soundblaster Live! card to record and save to disc using sequentially generated filenames.

At present the staff walk in 24/7 (almost) and use a "Coomber" classroom cassette
recorder - they can /just about/ manage to use that by themselves.

If I want to make a DIGITAL recording I have to start it going on the PC in the
"control room".

They would NOT be able to interact with a PC - they can barely copy a file in
Windoze !

The pressure mat thing comes about because of the infuriatingly slow response
time of the recording software. If it was instantaneous or I could trust 'em not to speak before a red light came on, I would just take a feed from the RECORD button on the cassette recorder they're already familiar with.

There would of course be a warning sign to the effect that recording was active

The old SB16 used to at least come with DOS applications such as "record.exe" but now I'm using a later card and a machine running NT (2000 or 98 a
possibility).

I surely can't be the only person wanting to do this. Even CoolEdit Pro seems to lack this ability.

Any pointers to how this might be achieved would be gratefully received - I'm looking for an excuse to do a bit of programming in visual basic or whatever ......

thanks ....

Jeremy

Ouch! Tagline's report on WBZ-TV's technical problems during their late news is unnerving in that TV is about ready to wrap up the May sweeps period. But what further surprises me is that apparently they didn't have full redundant back up....identical control rooms feeding separate paths to their automation or master control switcher. Given what 30 second spots go for on the late news, a fully functioning backup up isn't all that expensive!

It can happen to anyone though (and it has happened here--we have an infamous blooper of our "bow tie weather guy" attempting to do the forecast when the chroma key crashes)....live by the computer and die by the computer!

Warning signs or not, verify with your legal consultant that unattended recording doesn't violate rights of persons in the room. In many states here, recordings made without the express consent (read that: Asked and Answered) of the parties being recorded is a crime.
And in the event someone should pull another party into the unoccupied room for a quick chat, and activate the recording devices, expecially with digital recording technology (very low noise floor), even low level recordings off mike may be recovered for use by any party. That would make you, the owner of the studio facility, and the party recovering the unauthorized recordings legally liable for the crime.

Actually, staff was notified during an edition of Haverhill High School basketball that the switch was taking place. The board op/PD of the game was notified similar to what you described in your post.

As the former ND at WHAV, we had heard alot of grumblings about the format change time and time again. I left WHAV about 6 months prior to the change over to Hispanic broadcasting.

> When Costa took over WHAV, it was done in complete secrecy. The-then WHAV owner
> was denying that any switch was imminent. Not even the station staff knew, and
> they were joking on-air about the rumors.

Numerous times, that was the case.

> reach out to Haverhill all that much. I know what you must be thinking - if WESX
> goes out, where will you get your news from? I live in Haverhill -- I know what
> it's like.

I feel for people like yourself - not just in Haverhill, but all around who aren't serviced by their local radio stations any longer, for one reason or another. But...and this is a hesitant but - I can also see the side of the coin that Costa-Eagle are servicing a part of the community - the Hispanic community. From what I understand, the folks who were leasing time from WHAV prior to the switch were getting 3X our rate card for spots at all hours of the day and night. We had a hard enough time selling basketball games to the point where me and the former sports director went out and sold it ourselves. I also recall having to sell election coverage.

So, while your support is evident - I agree. But there's also something to be said for the support of and from a business community that at times, didn't care whether WHAV lived or died.

If WESX (another heritage local radio station) does "go" Hispanic, its probably for the same reasons WHAV went Hispanic...because there is a call for it in the community and the English speaking population chooses not to support the efforts of the hard working folks at the station in Salem.

Thanks for bringing me down memory lane.

2163. Composite STL over Fiber

Newsgroup: rec.radio.broadcasting
Date: 2000-05-22 00:00:00 UTC
From: theodric@mit.edu
Message-ID: <3929a1b8$0$10889@senator-bedfellow.mit.edu>
Source record: 19419

Hi,

We're getting a fiber optic cable put in between our transmitter and studio and we're in the process of looking for a new STL system. This will be replacing a somewhat noisy 12-pair phone cable that we've been using for 20 years.

We are also shopping for a new stereo generator and we would like to be able to keep our stereo generator in the studios, and not at the transmitter a half mile away. Is anybody else running the composite signal out of their stereo generator over a digital link? How much bandwidth are you using?

I found a great page that discusses the benefits and drawbacks of running discreet vs. composite signals over an STL at:

http://www.intraplex.com/appnotes/discrete.htm

This page argues against running composite over the STL because a T1 does not have enough bandwidth to adaquately send composite data. But we have raw fiber, so we can run at pretty much any speed we want to. We just need to find the right equipment to do the job. Keep in mind that we'll need to multiplex our telemetry/transmitter-control data in with our audio signal.

If a composite signal has 53 kHz of bandwith, then we'll need a sampling rate of around 112,000 samples per second. If we do 16 bits/sample, that comes to 1.792 Mbps which is too much for a T1, but a little less than an E1. Ideally, we'd like to sample with more resolution than 16 bits (18?... 20?...), so this pushes the bitrate even higher.

Although this does not come anywhere near the capacity of the fiber medium, it does push the limits of available telecommunications products that can be used to realize a solution.

So if you're station is sending the composite output of your stereo generator over your STL, I'd be interested in hearing how it's being done.

The switch took place on a Sunday night at midnight and according to published reports I read, most staff were NOT notified. Radio Luz (purchased time) folks were in the studio at the time the plug was pulled. In fact, according to the Haverhill Gazette, and some staff members I spoke with, most DIDN'T know. Because the Haverhill High girls' team was involved in the upcoming state basketball tournament, and advertising had been sold against it, they had to revert back to English broadcasts of the games for the next two weeks. There were also objections and calls for the FCC to review this because the studio operation was pulled out of Haverhill in a midnight "Baltimore Colts" style move, without telling anyone.

> As the former ND at WHAV, we had heard alot of grumblings about the format
> change time and time again. I left WHAV about 6 months prior to the change
> over to Hispanic broadcasting.

Probably a good career move. Some caught on with other stations. One on-air guy wound up selling cars for awhile. Other than Eric Heenan and Frankie Foxx doing traffic reports, I haven't heard any of the on-air staff. And you are probably aware that Jared Tuccolo ... who was the heir apparent to sports on 'HAV, recently passed away.

> I feel for people like yourself - not just in Haverhill, but all around who

>

There is no doubt that there is a Hispanic market in the area. And I think where WHAV sealed its own fate was when the station started "bleeding", instead of improving things, or trying to figure out other ways of retaining audience, it was just cut-cut-cut-cut-cut.

There was some trouble with the election coverage, as you know. The 1990 incident where both WHAV and the local cable access channel decided to boycott the Library Association's candidates' forum did not sit well with any of the

local politicians.

Then the incident in which the critical Bruins' playoff game was pre-empted for an infomercial from, of all places, a local private mental hospital, raised guffaws all the way into the Boston papers. The advertisers who viewed the station as a key Bruins' network station for the Merrimack Valley because the flagship station's signal was identified as WEAK were not laughing, however.

Of course, the incident in which the drive-time DJ / talk host was fired in the middle of her shift was a classic in New England radio annals. ("I'll be back right after the news with my guest" ... only she and the guest were replaced by a Baltimore satellator after the news).

Gaffes like these cannot be blamed on the local community.

> So, while your support is evident - I agree. But there's also something to
> be said for the support of and from a business community that at times,
> didn't care whether WHAV lived or died.

I agree with that as well. The business community in Haverhill apparently was not overly receptive to WCCM's attempt to come into town, and so 'CCM has turned its head west - to Lowell. And they have even opened up a Lowell studio.

There was an attempt to have a "Haverhill Today" show - but the producers chose Sunday morning throwaway time because it was cheapest, and instead of the show being "Haverhill Today" it actually was "Haverhill as it used to be a long long time ago". I warned the show's producer and underwriter - if you start talking nostalgia for three hours, you're in trouble. The show didn't last. In a parting shot, the producer blamed Haverhill for the failure.

> If WESX (another heritage local radio station) does "go" Hispanic, its
> probably for the same reasons WHAV went Hispanic...because there is a call
> for it in the community and the English speaking population chooses not to
> support the efforts of the hard working folks at the station in Salem.

It's a two way street -- in order for local radio to survive, these AM stations have to provide something to their communities and also make folks feel good about their communities as well. If a station goes satellite / second-rate gasbag radio for 18 hours a day, people shut off the radio. Yes, the station's expenses go down. So does the listenership. They don't teach that at the booths at the radio conventions. They just show how you can cut overhead.

And when advertisers turn on the radio where they invest their dollars and don't hear any local news or sports -- they assume that the station owner has lost touch with the community and so they pull their ads.

There is nothing grandiose about listening to some guy 1000 miles away selling quack medicine or a late-night show dedicated to bubble-gum card collecting or getting prepared for Y2K disasters. People change the dials and don't change them back. No restaurant is going to have that playing on its speakers. People aren't going to listen in their offices or after dinner.

Wally, I can sympathize with your comments. Same thing happened here,
except the maps didn't move.

We have camera robots at our place. Via operator error, we have had a few
boo-boos. The worse one being as they started a sports segment, the
operator pressed the "jump" button, which causes the camera to go from
point-a to point-b in less than .3 seconds. Problem was, not only was the
shot off, but in turning, the camera caught the floor director by surprise
and knocked him across the studio floor (much to the amusement of the
sports anchor). Next night, the floor director did the sports segment with
a batting helmet, catchers mask, and padded vest. <grin> FYI, our camera
system is detailed at http://nbcin.wlio.com/engineer/robotic which is a
copy of an article I wrote for TV technology.

2171. St. Louis Blues radio broadcasts moving to 550 KTRS

Newsgroup: rec.radio.broadcasting
Date: 2000-05-23 00:00:00 UTC
From: GDCCK@aol.com
Message-ID: <ce.5bb474f.265bdc79@aol.com>
Source record: 19427

The St. Louis Blues announced on Monday they will be moving from KMOX 1120 to KTRS 550 for their radio broadcasts. The 3 year deal will run through the 2002 - 2003 season. All of the Blues games will be heard on KTRS as opposed to KMOX which pre-empted most of the post-season games in favor of the Cardinal baseball games.

I saw a blooper from the mid-1980s -- the early days of computerized weather graphics systems -- where the system was supposed to draw and fill a shape (may have been an isobar or some such); apparently the shape wasn't completely closed, as the system proceeded to "paint fill" the entire image area aside from the title bar!

"We are also shopping for a new stereo generator and we would like to be
able to keep our stereo generator in the studios, and not at the transmitter
a half mile away."

A "stupid" question: why can't the generator stay at the transmitter?
Harris' Digit CD exciter sounds like a possibility worth considering; it
takes two channels of AES3 digital audio and generates the final FM waveform
entirely in the digital domain.(it comes out of D/A at about 5 MHz and is
then upconverted to the assigned frequency).

Does that actually exist? I've never seen anyone with a hot standby for
their control room switcher, though I'm sure it exists somewhere. (that
said, sure don't remember seeing any provisions in any of our switchers
for driving two switchers from one control panel. And what do you do if
it's the *control panel* that dies?)

We do have a backup control room. It would take a couple of minutes to
get things cut over to the backup.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through Friday. This is because Pacifica will not allow us to broadcast the Pacifica Network News over Realaudio.

WRSU is probably a low power station and the signal is better in mono.
Aparently WTN Nashville's talk station at 99.7 FM is about to start
broadcasting in stereo. The promos say something like talk like you've
never heard it before.

2182. ownership alternative

Newsgroup: rec.radio.broadcasting
Date: 2000-05-25 00:00:00 UTC
From: "G.T. Tyson IV" <Tarkus@skantech.com>
Message-ID: <392DAA7A.DACA9DAA@skantech.com>
Source record: 19438

I got to thinking the other day about a possible alternative to the usual business model of radio station ownership. Would some of you managers and/or owners drop me a line and tell me whether the following scenario is doable or not?
Apply for a license, obtain a frequency, build a tower and transmitter, then lease it out to a third party who would program it without actually owning the transmitting facility. They would be subject to all current FCC programming and content regulations like any licensee would be, but they would be considered as a "tenant" on a transmitter for hire. If the tenant goes out of business, the frequency goes dark until the next tenant signs a lease. Isn't this what Radio Disney is doing with some of the AM stations it programs? This could be a profitable alternative to LPFM, making a commercial frequency available to individuals or corporate entities that could never afford the cost of a startup operation otherwise.
Is this model of tower-and-transmitter-only broadcasting being done anywhere in the USA? Are there FCC rules that specifically prohibit this sort of thing? I have to admit it sounds like a good alternative to the headaches of maintaining a payroll
and dealing with consultants and that sort of thing. Let somebody else worry about that stuff. Anyway, I would like to hear from folks in the management/ownership arena who know their stuff and could comment intelligently on it.

If they pull it off they would have the ultimate blowtorch wiping out
Syracuse and Youngstown.<

No, they wouldn't. The two directional patterns both have very deep nulls
toward Syracuse and Youngstown. The only direction with any substantial
radiation is approximately 100-110 degrees true....aimed squarely at NYC and
LI.

All over the place. A lot of AM stations **only** lease time. We
mentioned WHAV earlier ; what happened there was that a studio was built
in the next town over, and the "plugged was pulled" on the local operation
at midnight. The prospective buyer was going to lease the station until
the actual license transfer went through. Because there were two
objections filed to the transfer of the license, the actual transfer of
ownership wasn't completed for over a year.

Must be. WTMJ used to emanate from my hometown of Brookfield, a few
miles west of Milwaukee. Now they have relocated some 30 miles to the south.

Yes. It's a fairly tight pattern.

By the way, I need to acknowledge I misspoke about *all* 50KW regionals
having to go DA daytime. The other reply refuting that statement is
accurate.

Source record: 19354

For Sale:
Optimod 8000A FM Stereo processor/stereo generator. Works well, but no manual, and missing small metal cover that goes over the front panel recessed controls.

Panaxis FME-500 1/2 watt synthesized FM transmitter, 88-108mhz w docs. Built into a cast aluminum metal cabinet with power + PLL lock LED's on front. Has removable 12vdc power cord and a regulated 3 amp 12vdc supply that goes with it.

ATI MM-100 "matchmaker" audio level and impedance converter. Allows processor to be fed with unbalanced "consumer" type equipment.

$1000 for complete package.

(Harris Broadcast sells the Optimod 8000A used for $1199 alone, when they have them)

If equipment is picked up in the Sacramento area, (or I can deliver within a reasonable distance) i will include a custom built "J" pole antenna tuned to the middle of the band. This antenna is constructed with 3/4 inch copper pipe. Also, I will throw in a 50 foot roll of RG-8X coax with connectors.

Please call (916)563-7482, or if I don't answer, page me at (916) 522-6934

Source record: 19355

The FCC began allowing 'regionals' to have up to 50,000 watts a few years back. Currently, there are in the vacinity of 30 stations on the old regional channels with up to 50,000 watts day and night (although most don't run the full power, but certainly exceed 5000). There are even a couple of stations increasing to 50 kW days, but cranking back down to less than 200 watts nights. WMCA's new directional patterns throw most of the signal out in the Atlantic, posing even less threat to Syracuse and Youngstown than before.

As other posters have mentioned, the regional channels now have a 50 kw cap. For an existing station to increase above 5 kw, they must continue to protect the existing allocations/operations to the extent of the new rules.

In Los Angeles, the old KIIS-AM (born KRKD) on 1150 got 50 kw day, 44 kw night on a regional. KFWB-980 and KLAC-570 both have 50 kw CPs. You will find that most of the 50's are along the coast, where they can maintain the same protection and blow the high power lobe out over the ocean at Morocco or Fiji. In many cases, this is justified as the field over the market is dramatically enhanced. One good example is WADO-1280 in New York, which as a high band 5 kw station had real trouble in Manhattan buildings and apartment dwellings. At 50 kw, the land coverage is not substantially extended, but the strength in urban areas in the NY core market is much better. Another NY station to do this recently is the 1600 operation of WWRL, which has been at 25 kw day and night for about a year or so; the old 5 kw on 1600 just could not penetrate. Again, the power is shot over the city towards the ocean.

KXTK (formerly KIOA) in Des Moines had a CP back in the 70's for 50kw daytime, but they never built it. Their nighttime pattern is the problem and they still would have been stuck with the 5kw highly directional pattern.

WTMJ did a good job of designing their 50 kW-D, 10 kW-N (DA-2) plant to cover the market well, losing nothing over their prior setup and gaining a lot to the north and northwest of their site (which is south of Milwaukee). WWJ in Detroit and KFWB in Los Angeles are a pair of CBS O&O newsers now building 50 kW fulltime operations with a DA-2. (WWJ was originally going to be lower in power by day but I understand the CP has been changed. KFWB was actually single-stick around the clock before, but limited to 5 kW.) It'll be interesting to see if they get anything out of the money they're spending on their complex transmitter plants and higher power.

>The pattern would be tighter toward Youngstown and Syracuse,
>unless they pull a "WLIB/WOWO" and buy WSYR and WKBN and cripple them so
>they can let out their patterns.

Can't see it happen. Too much loss involved to the major group owners controlling each of those stations, WSYR and WKBN...'cause they are market ratings and revenue leaders in their respective towns, in a way WOWO no longer was.
WMCA may never build that CP. It would require doubling the size of the antenna farm from 3 to 6 towers, and probably would not get them enough added revenue from the additional coverage to make it worthwhile. (Actually the big winner would be WNYC, which diplexes on WMCA's site, and would be able to raise ITS power from 10 to 50 kW days, 1 to 10 kW nights, and boost ITS audience in Long Island bigtime.)

>There are more than a few Regionals that are applying for various powers.
>And I recently saw that the Commission broke it's rule of allowing an
>X-band station other than 10k/1k.

Most of the stations that used to be III-A regionals could probably boost their power either daytime or fulltime IF a signal stronger than 5,000 watts would enhance their coverage in a useful and economically beneficial way. We considered bumping up from 5,000 watts DA-N to 10,000 watts DA-2 ourselves, and maybe still might someday---but for the moment, we've contented ourselves with taking out a CP for an antenna system modification a few years ago, and then loosening our directional pattern at night (a lot lower cost solution that substantially improved our signal in parts of the metro).

WPEN 950 AM Stereo in Philadephia -- currently 5 kW non-directional day,
5 kW directional night -- has an Application for 50 kW direction day/night,
beaming the equivalent of 300,000 watts towards Philadelphia and southern
New Jersey. They are doing this because the property the old towers and
transmitter are is worth more than the property where the new stuff is
being built -- so when the new 50 kW signal is on the air, they can sell
the old property and make some money!

I'm looking forward to hearing 300,000 watts of "STEREO 95 AM"! They are
owned by Greater Media, which also owns the great WCTC 1540 AM Stereo in
New Brunswick, NJ -- a lowly 1 kW "graveyard channel" station with a superb
local news/talk format and superb AM Stereo sound.

A change in FCC regulations allowed powers of up to 50KW on regional channels a few years back.

But stations still have to protect the others on their channel from interference. This means that if you're going to increase power from 5KW to 50, you have to use a MUCH more directional antenna to limit the power in the direction of Syracuse and Youngstown to no more than there would have been at 5KW. The vast majority of that 50000 watts is directed out to sea. (of course, New York City just happens to be between the transmitter and the sea!)

WWRC-980 in Washington (actually I think they've had a call change), WTMJ-620 Milwaukee, WNQM-1300 here in Nashville are a few other regional stations that are now running 50KW at least during the day. There are others, but not a whole lot.

In many daytime allocations, this is not true. The 5 KW limit the station formerly had to observe may not be as a result of protecting another station, but was the maximum power for class. I have no idea whether that is true in the case at hand.

Many times the daytime DA used by a 5 KW regional was a result of attempting to improve coverage over the city of license rather than protecting another station.

There are many 5 KW regionals, DA or no, that have become 50 KW non-D's, daytime.

Rock-it Radio listeners club Home Page: Archive: Message #197

Date: May 21 2000 09:54:04 EDT
From: "Rock-it Radio listeners club" <Rockitradio@earthlink.net>
Subject: Rock-it #168 is launched -- Tribute to SUN and it's lesser known artists.

Hello everyone,

Here it is early early Sunday morning as we type this to you and it looks like it's going to be a great day! We are having a bit of a heat wave here in Ventura, California and since the Sun is doing a great number on us right now we thought we would focus on the famous SUN record studio. The home of such greats as Elvis Presley, Carl Perkins, Jerry Lee Lewis, Johnny Cash, Roy Orbison and we can go on. But we thought we would also focus on some lesser known SUN Recording artists as well, and dwelve a bit into the roots of SUN records before Elvis came along. It is all in show #168 on Rock-it Radio.
But to get things going we thought we would feature a new band out there and the latest Rolling Rock CD to come out of Las Vegas, Nevada. The bands name is Johnny and the Blades. They have a pretty great sound and they get things started on show #168. You can learn more about this band by going to our Rockabilly links page at http://www.palmsradio.com/rockabillylinks.html and scroll down in the band section until you find them. You can also find a link to the SUN record studio there also!
In the mean time here is the playlist to Rock-it Radio show #168 on the Rock-it.

1. Help you Dream -- Johnny and the Blades 2000
2. Just Walkin' in the Rain -- The Prisonaires (sun 186) 1953
3. Baby Please -- The Prisonaires (sun 186) 1953
4. Moanin' at Midnight - Howlin' Wolf (chess1479) 1951
5. Bear Cat (answer to Hound dog) - Rufus Thomas (sun 188) 1953
6. My Kind of carryin on- Doug Poindexter & his starlite wranglers (Sun 202) 1954
7. That's All right - Elvis Presley (Sun 209) 1954
8. Good Rockin' Tonight - Elvis Presley (Sun 210) 1954
9. Rock Boppin' Baby - Ed Bruce (Sun 276) 1957
10. I need a Man - Barbara Pittman (Sun 253) 1956
11. Rock Baby Rock-it -- Johnny Carroll (unissued) 1957
12. Be mine - All mine -- Johnny Powers (Sun 327) 1959
13. A Thousand Guitars - Tracy Pendarvis (Sun 335) 1959

14. Green back dollar watch and chain-Ray Harris (Sun 272) 1957
15. Red Headed Woman - Sonny Burgess & Pacers (Sun 247) 1956
16. Why do I love you - Alton & Jimmy (unissued) 1959
17. Forty Days - Wade Cagle & The Escorts (unissued) 1960

To tune into the Rock-it show #168 simply go to our archive website
at http://www.palmsradio.com/rockittext.htm and click to show #168.
~~~~~~

The Voting Booth

Don't forget Rock-it Radio has a voting booth for you the listeners
to vote on what style of oldies do you prefer on the Rock-it.
As we play both Rockabilly and Doo Wop here on Rock-it Radio here is
the latest results of the survey.

1950's Rockabilly 117 votes 38%
Doo Wop 115 votes 37%
Rockabilly today 75 votes 24%

If you haven't voted yet you can go to our main page at
http://www.rockitradio.net and scroll down our links list and
click to the link asking which you prefer Rockabilly or Doo Wop and vote.
~~~~~~

Well that's it for this edition we hope you enjoy show #168 on
Rock-it Radio.

All the best,

Bennie Dingo
Rock-it Radio

Remember we always enjoy trying to get those requests and dedications out
so if you have any let us know!

>Noticed in BROADCASTING/CABLE YEARBOOK WMCA/570 in NYC has a CP for
>50000 watts days and 30000 nights. How could a regional even be
>considered? If they pull it off they would have the ultimate blowtorch
>wiping out Syracuse and Youngstown. It is also listed in the 1995
>yearbook.

Not really. The pattern would be tighter toward Youngstown and Syracuse,
unless they pull a "WLIB/WOWO" and buy WSYR and WKBN and cripple them so
they can let out their patterns.

There are more than a few Regionals that are applying for various powers.
And I recently saw that the Commission broke it's rule of allowing an
X-band station other than 10k/1k.

Is WTMJ running directional to the north? They sound about the same in Chicago
as when they were 5kw and it seems to me that they'd be coming in loud and clear
into here if they were 50kw omnidirectional or direction to the south.

But they're on 940, where 50KW has always (or at least for at least 70
years!) been legal as long as you can do it without interference.

KIOA was (and still is under new calls) on 940, a clear channel which
"always"had a 50 kw ceiling.

Believe me, in the NY market, the 50 kw is nearly a necessity for survival
with increasing interference and construction density. The issue, like that
for another NY station now building its 50 kw facility, is improving
reception in the area already covered due to increased field strength.

Even WWRL on 1600 had to increase power just to keep its existing coverage
from the "halcyon" pre-dimmer, pre-computer, pre-halogen lamp days.

Due to land and zoning restrictions, it is possible that neither of the LA CPs that are unbuilt, KLAC-570 and KFWB-980, will not be built. KLAC was trying to design a diplex on the KRLA site, but KRLA is up for sale and the ground conductivity there is terrible. KFWB has similar problems, but related to zoning issues.

The calculated contours of both stations would barely improve to the N, E and South. However, in the areas f greatest population density, the field strength would be radically better and make for easier listening in the Arbitron survey area. The issue here is improving strength above increasing interference and construction density, not moving the contour out. For example, many LA stations are among the top rated facilities in San Bernardino/Riverside and Oxnard/Ventura. None derives revenue from this, as the fringe markets can't pay LA rates. The extra coverage is a nice bonus, but is economically useless unless there is some minor advantage to having LA residents be able to leave town and still listen on trips.

Halogen lamps have NO nonlinear elements to cause noise. They are just
as RF-quiet as ordinary tungsten lamps. You probably meant the new
screw-in flourescent lamps with their internal oscillators running at
many kilohertz.

I find that electrical power lines, especially the higher voltage ones
on the foot-long grey self supporting insulators, get noisier by the
year.

The automated top of the hour ID on 940 says "AM 940 KXTK Des Moines."
Although the station simulcasts KIOA about 90% of the time, it's call
letters are KXTK. I just heard the 9:00AM ID. For some reason, they
have never changed 93.3 from KIOA-FM to just KIOA. On the 93.3 legal
ID, the "fm" is buried in the jingle, so it sounds like "KIOA (with a
very faint FM) Des Moines."

I work at KIOA part-time.

These are nearly becoming 'bedroom communities' of the LA area.

As a former resident <~25 years ago...> and frequent traveler in the area
(two, three times per year, by automobile...), I can tell you that it is
nice to be able to pop onto a decent sounding AM station and listen for an
extended peiod of time...just for the traffic reports alone!

> None derives revenue from this, as

Sorry for what may well be a stupid or old subject, but I just arrived.

Ii¿½m doing some commentary for the university radio station and happened into a cheap, used PMD 201. It is in great condition, but it doesnï¿½t have an ownerï¿½s manual and there are a couple of features - the telephone jacks, for instance - that I could use some direction with.

Is there a source for the manual? Is it a hefty volume or a small booklet? Does anyone have it in the computer, that it could be copied and pasted into an e-mail?

Any and all help will be greatly appreciated.

Oh, any recommendations for a good, but inexpensive mic for this machine?

Thanks.

Allbest,

Jim

You should be able to plug into the telephone jacks and use the tape recorder for sending and recording audio directly without an external hybrid. The jack, IIRC, are layed out like the modem/phone jacks on your PC, (Mac, if you are so inclined) Plug the phone into one, the line into the other, and record your conversation. Been a long time since I"ve used one, so your mileage may vary.

The book is fairly light reading. Someone on the audio newsgroups should have a copy.

As for mic....EV 635 is the standby, I prefer a dynamic like a Shure SM 58, Beyer makes some very good ENG mikes, and EV makes a mess of them. Hit one of the pro audio websites for further details, prices and specifications. WWW.Fullcompass.com has good prices and great service. My rep is Juli, you'll find her e-mail address on the site, too. Tell her I sent you...she has stories to tell.

"Jim Burgan" jim@burgan.net remarks ...

>>
I was wondering what was going on... I kept waiting for you (Peter) to respond to this thread (and others).

Glad you're OK...
>>

Thanks, Jim.

The essential historical problem is the U.S. treated Class IIIs as strictly 0.5 kW, 1.0 kW and 5.0 kW stations, with a few exceptions for 0.1 kW stations (the so-called "grandfathered Class IVs"), and only later added 2.5 kW as a permissible power level (circa 1965).

All of this while Class II-Bs were treated as 0.25 kW, ..., 50 kW stations.

However, Canada and Mexico have always treated Class IIIs as if these were Class II-Bs, with numerous examples of 10 kW and 50 kW Class IIIs, and a few 0.1 kW and 0.25 kW kW Class IIIs, too.

The "Rio" treaty essentially recognized this disparity (which really placed the U.S. Regional stations at a disadvantage for decade after decade) and resulted in Class III-As and Class III-Bs being reclassified as Class Bs, along with the former Class II-As and Class II-Bs.

(Class II-As are unique to the U.S. and the FCC classifies these with Class As in some cases.)

By being reclassified as Class B, this allowed 0.25 kW stations to be assigned to the Regional channels. There are numerous Class B stations on Regional channels which are 0.25 kW nights and 5 kW or more days, non-directional nights. These could not have been licensed under the old classification system.

Most Class III-As and Class III-Bs which have dramatically increased power have been coastal or border stations.

In some cases, 50 kW nights has been done, while retaining 5 kW days. Likewise, in some cases 50 kW days has been done, while retaining 5 kW nights.

The best Class III-A conversion to 50 kW unlimited is probably KMJ/580, where four 850 foot towers will provide greater than Class A efficiency. Coupled with the very good ground conductivity of California's Central Valley, this should be astonishing, when completed.

This conversion did not require purchasing and taking dark any stations.

The second best Class III-A conversion to 50 kW unlimited (44 kW nights, actually) is probably KXTA/1150 where all five of KTNQ's towers are used and with the 200 degree towers (on 1150; 180 degrees on 1020) and ground system actually provide the equivalent of about 80 kW (RMS) days and 70 kW (RMS) nights.

This conversion required purchasing and taking dark several co-channel stations.

The worst Class III-A conversions to 50 kW unlimited are probably KLAC (returned, and perhaps never to be built) and KFWB (status unknown, but probably dependent upon KLAC as these stations are diplexed days).

The proposed KFWB conversion is especially interesting as it is presently 5 kW ND1, yet when converted it will have to radiate virtually nill towards Salinas (a recent conversion to 10 kW full time) and towards Mexico.

This will allow a low power full-time station to be "dropped in" in Tiajuana, only about 100 miles from Los Angeles.

If you have a telephone line splitter....i.e a jack that has two phone terminal outlets on one connection.....you can patch one line into the Marantz...which I believe can both record off the line and playback down the line. . .Very nice feature if you are feeding actualities back to the station from the field or recording sound from the phone line...
You need a regular telephone patched in to the other jack of the line splitter for talk back. I used this machine for recording traffic reports a few years back....worked great! Sounds good on playback over the air too...

>Is there a source for the manual? Is it a hefty volume or a small
>booklet? Does anyone have it in the computer, that it could be copied
>and pasted into an e-mail?

Try writing Marantz. They are still around these days...

2226. KFRC Oldies 500 Countdown - 2000

Newsgroup: rec.radio.broadcasting
Date: 2000-05-28 00:00:00 UTC
From: robins@ix.netcom.com
Message-ID: <393183ac.4848449@smtp.ix.netcom.com>
Source record: 19382

KFRC Oldies 500 Countdown
Memorial Day Weekend - 2000

The Top 10:

1. California Girls - Beach Boys
2. Yesterday - The Beatles
3. Satisfaction - The Rolling Stones
4. My Girl - Smokey Robinson & The Miracles
5. Sittin By The Dock Of The Bay - Otis Redding
6. Respect - Aretha Franklin
7. Hey Jude - The Beatles (last year's #1)
8. My Guy - Mary Wells
9. Brown Eyed Girl - Van Morrison
10. Baby Love - The Supremes

+_+
+ +

The Bottom 10:

491. It's Too Late - Carole King
492. War - Edwin Starr
493. Double Shot (Of My Baby's Love) - Swingin' Medallions
494. Wedding Bell Blues - The Fifth Dimension
495. Who's That Lady - The Isley Brothers
496. Going In Circles - Friends Of Distinction
497. Time Has Come Today - The Chambers Brothers
498. Israelites - Desmond Dekker
499. Stay - Maurice Williams
500. Beginnings - Chicago

Eventually the whole list will be posted
on the KFRC website: www.kfrc.com
.

2227. Re: BA1404 Kit

Newsgroup: rec.radio.broadcasting
Date: 2000-05-28 00:00:00 UTC
From: Boogieman <boogie@qix.net>
Message-ID: <8h3pv8$3or$1@grus.qix.net>
Source record: 19383

I'm assuming that it's a one chip design, just the BA1404... It won't produce much more than a few milliwatts at best... I always thought the BA stood for Bad Audio, which is what you'll get!... In addition, the BA1404 kits are HIGHLY unstable and drifty in addition to having gnarly audio...

They're good for connecting to a Walkman to play thru the car radio type of thing... If you want to ENJOY your computer, CD's, MP3's etc, then check out Veronica Kits (www.veronica.co.uk)...

I purchased an ASSEMBLED & TESTED 50 mW FM Stereo transmitter kit from Veronica Kits that uses a much better 4 chip design (no BA1404 at all!). It puts out approx 50 milliwatts of clean FM stereo and I don't have to keep chasing the frequency around... The audio is cleaner than the BA1404 hands down...

I'm in a large apartment complex on the second floor... I have a pair of TV rabbit ears connected to it and I cover the entire complex quite well without any antenna outside. Of course, you'll have tomake the purchase in POUND-STERLINGS instead of dollars... it cost about $67 total, including the shipping from the UK. I have to say that I'm pleased with the kit. You can get it in kit form a bit cheaper...

You might want to check it out!

You are right. I stand corrected. What I meant to say was the $19 Home Dpot
halogen lights with built-in dimmers, which are the noisiest things I have
ever heard.

There is a street in Burbank, CA, where for about 2 miles you can not even
listen to KFI without noise. And, according to our own measurements, KFI has
about 28 mv/m in that area!

Other AMs are just wiped out... appears seasonal, with the dry season
gradually building up to high noise levels as dust deposits build on the
insulators.

>>

Correct.

Here in the "other Bay Area" (Monterey), KGO, which sends about 145 kW (equivalent) towards my area, is wiped out by utility-based noise, while KCBS, which send a little more towards my area, but is also 50 miles more distant, comes in clearly.

So, this effect may be frequency dependent.

PG&E (our local utility) has been minimally responsive to correction of its interference. The last "trouble call" took nearly a year to process.

Bug your local utility (Burbank has a municipal utility department) first.

In the L.A. area, Burbank, Glendale, Pasadena and, of course, L.A., each have municipal utilities, and these are often more responsive than publicly-owned utilities (PG&E, SCE, SDGE, etcetera).

Peter (former E.E. with L.A. Department of Water and Power, and occasional contributor to this NG).

2230. I developed AVHistory for Audio Vault

Newsgroup: rec.radio.broadcasting
Date: 2000-05-29 00:00:00 UTC
From: d <beck@radiocity.cz>
Message-ID: <8gu231$2j50$1@news.vol.cz>
Source record: 19386

Hi everybody

I developed program AVHistory - program for all radio stations which use Audio Vault AVAir.

It is very useful when DJs have to chance playlist manually for example at the end of the hour.
You can view song / artist history (schedule) 14 days to the past and up to 3 days ahead! It reads logs directly from AVAir.

Thanks to this program it never happens again that DJ inserts a song which was played few hours ago. We previously use Selector in on-air studio but when DJ inserted Beatles Help at 6.50 am, DJ at 10.50 did not know that because song history in Selector was not updated.

It has many more features. You can browse Audio Vault inventory by artist name, song title, duration, id or intro.

Visit my web site www.volny.cz/davidbeck and download free demo version.
Please, write me how did you like it.

Here in MA several good community AM's have gone Hispanic. WARE/1250 in Ware is the most recent. They used to be big on local programming, news, local sports, school cancellations, etc. Ironically, there isn't a big Hispanic population in their service area. WSPR/1270, Springfield, a heavy hitter in the 50's and 60's is all Hispanic and had their COL changed to Holyoke, a city to the North with a heavy Hispanic concentration.

That's dang weird.

The FCC database says that they had an app in for an expanded band. Did
they get it and move the "real" programming there?

I LOVE countdown shows, but because of the state of format rules we never hear a TRUE countdown of the top hits, including 50's do-wop, 60's bubblegum, 70's disco (well I could do without that), 80's & 90's rock and "hard rock" of all generations.
Last Memorial day in Houston we had two countdowns, one on "good time oldies" KLDE, the other on "Classic Rocker" KKRW. Neither said how its list was compiled. This year nobody in Houston did a countdown (If they did it was not publicized very well).
When oldies stations do countdowns, it's pretty predictable who will win because they don't have any newcomers to challenge the perennial top hits.

Source record: 19395

WTMJ is running 4 towers day (50kW) 6 towers night (10kW). The location is west of the Kenosha/Racine county line. You can see the towers at night from the hiway. You can also see WISNs' 9 tower array which is just to the north of WTMJ. Awesome sight.

I believe that WTMJ has the same equivalent power towards Chicago, but it is killer to the north. The range is significantly better. However, at night, their northwest coverage is a little poorer.

The Brookfield facility has been gone for about 3 years now. The Bluemound Road area is all strip malls and the Journal Corp is trying to sell the land.

A daytimer in a Chicago suburb, 1030-WNVR Vernon Hills IL, quite a few years ago sold most if not all of its time one summer to Six Flags. The normal format at that time was business news/talk (basically plugged into a satellite feed) After that, the station was sold, and it's all (or mostly) Polish language.

Which means that WISN and WTMJ are in North Cape, WI. I worked at the
WISN site in 1966 while I was taking up EE at UW. However, I thought
that they had 11 or 12 towers then. They never could get that array to
work their 50-H at 50 KW for the night pattern. They kept work crews
busy cutting down hundreds of trees and reworking power lines around
their facility! Instead of having to continue cutting grass, they kept a
sheep herd working at subsistence wages. And a snowmobile for commuting
to the dog houses (to keep the feet clean).

Gary Schnabl remarks ...

>>
Which means that WISN and WTMJ are in North Cape, WI. I worked at the WISN site in 1966 while I was taking up EE at UW. However, I thought that they had 11 or 12 towers then. They never could get that array to work their 50-H at 50 KW for the night pattern.
>>

As I recall, Hearst applied to convert WISN from 5 kW DA-N on 1150 to 50 kW-D, 10 kW-N, DA-2 on 1130 [*] in the mid 1960s, and that operation with more than 10 kW-N or with more than the present nine towers was not a consideration.

The night array is balanced from north to south, but is slightly unbalanced from east to west.

I would expect that 12 towers (4 by 3) might work for 25 kW or perhaps even more, nights.

But one would have to carefully consider all the grief Detriot's 1500 went through when trying to make it's 4 by 3 work at 5 kW.

The performance of the present 3 by 3 at 5 kW (fully optimized method) is superior to the performance of the old (and abandoned) 4 by 3 at 5 kW (strictly multiplication method).

[*] Thereby becoming Wisconsin's only 50 kW station.

2245. Technical aspects of mp3's for broadcast

Newsgroup: rec.radio.broadcasting
Date: 2000-05-31 00:00:00 UTC
From: Cardboard1@aol.com
Message-ID: <9f.60b6ba1.2666b3f7@aol.com>
Source record: 19303

Can anyone tell me if there are technical problems associated with recording audio on a laptop in mp3 format, then e-mailing them to be broadcast? I've heard that mp3's may deteriorate when sent via satellite for broadcasting later. Is there any truth to that?

Thanks.

Source record: 19304

MP3 is a data reduction algorithm. Meaning as much as 90% of the digital data used to construct a wave form may be removed in the construction of an MP3 file. So called non essential data.

In most cases, the audible artifacts are minimal and may be ignored, when you consider the horrific level of processing and distortion added to a broadcast audio channel.

IF that audio file is then further encoded to sedat, or another algorithm for satellite transmission, all of which use additional data reduction, the audible deterioration can be substantial. Like dubbing from cassette to cassette, the audio quickly looses it's integrity after a couple of generations, MP3 if then transmitted by another data reduction algorithm gets pretty ratty pretty quick. IF the file is transmitted as data, not audio, through a compression algorithm for satellite transmission, essential data for recreating the audio may be lost, or corrupted, and you can windup with garbage.

Recording the audio on a laptop is another matter...The sound cards in most computers are marginal at best. Great for video games, but producing high suckage for serious audio. Meaning you'd need to install a premium sound card or your audio is degraded before it ever gets to MP3.

It is best to remember that MP3 is a data reduction algorithm, and there be only ONE data reduction or compression algorithm in the chain of distribution. That being the case, you'll be fine, otherwise, if more than one such algorithm is used along the way, you're in trouble.

Talk about being a small world. I teach in Lincoln Park, MI, a
stone's throw from the 1500 KHz facility that you cited! I never listen
to its religious programing with all that talk about demons and such.
Maybe they are referring to their directional array!

I was CE at 10 KW DA-D WAUK in 1966 and worked at numerous other
WI/VA facilities when I was younger. I don't keep up much about WI AMs
these days. However, the last time I did, WISN was operating with 25 KW
at nite. They did run a 10 KW rig at night in 1965 when I was there.

I recall the day WISN-1150 switched to 1130. I was working in Elkhorn, WI at the time, and when they switched, I tuned the old analog car radio down 20 kHz and . . .. it was BOOMing in.

I also was present for the KBOI switch from 950 to 670 while stationed at Mountain Home AFB, Idaho. Another boomer.
Being stationed out west during those years gave me the opportunity to hear several stations switch to, or assume residence on, the 'broken down clear channels'. 1030 in Wyoming, 720 in Las Vegas, 780 in Reno, 1020 in New Mexico, 1100 in Colorado, 1120 in Oregon (which came in good in Idaho for a few days while they were tweaking the pattern), and 700 in Utah.

Ahh. Those were the (DX) days.

Bill in Fort Worth

As I recall, PIA packaged the format, called "Great America Radio" (the Chicago Six Flags park is known as Six Flags Great America), with WGN given a credit. Musically, it was an AC/oldies hybrid with very inexperienced personalities. You are right, though--after the summer was over, the station was sold and went all-Polish.

Before Great America Radio and the satellite business format, WNVR was started as a news-talk format called "News-Voice Radio." It was owned by the News-Voice, a north suburban chain of community newspapers, and it was basically a megaphone for the former politician who owned the chain. The only other noteworthy thing I remember about the early WNVR was that one of Roy Leonard's kids was either GM or PD. Shortly after the station was sold to the people who put in the business news format, the papers went out of business.

>>
... 1120 in Oregon (which came in good in Idaho for a few days while they were tweaking the pattern) ...
>>

KPNW operates DA-1 into four 180 degree towers.

Reception in the Eugene area is OK days, but it doesn't reach much beyond the mountains towards the south or Salem to the north. Hence the 180 degree towers.

Hell while they were at it they could have installed 200 degree towers.

The difference would be significant: over 400 mV/m/kW at 1 km vs about 360 mV/m/kW at 1 km (180 degree towers) and about 280 mV/m/kW at 1 km (90 degree towers).

The pattern apepars to be a multiplication of a two-tower to protect KMOX/1120 (U.S. Class I-A channel) in St. Louis, MO, and a two-tower to protect first-adjacent CKWX/1130 (U.S./Canadian Class I-B channel) in Vancouver, BC, Canada.

Remember, even though KPNW (1120) can't reach Vancouver, BC, during the day, it certainly can at night, and that Class I-B (1130) deserves to be protected nights by all stations of lower class operating on 1120, 1130 and 1140.

>>
... and 700 in Utah ...
>>

The Class II-A in Utah was the last put into operation and is on 890.

WFVR is now a talk station. It was taken over by Chuck Harder, last time I heard, and was running the Talk America programming. There is a Disney station just south of there that runs nothing but Disney commercials. I believe it is at 107.5 or somewhere close to that.

2256. Technics 1200 Interfacing

Newsgroup: rec.radio.broadcasting
Date: 2000-06-01 00:00:00 UTC
From: Eric Aiese <aiese@fas.harvard.edu>
Message-ID: <8h4o3fakq1@news.fas.harvard.edu>
Source record: 19312

I'm trying to interface the Technics 1200s turntables with a Radio Systems console. I have an old DCX module card (ca. 1986) -- the beauty is that it only allows the console to start the TT, not stop it.

I'm a little confused by their literature, and the card, installed as instructed, doesn't work. The board is properly pulsing, so I suspect the problem is with the 1200. I've been scoping for hours, with no success.

So here's a couple questions for y'all:

1 - Which connection should start the TT -- is it bringing the "CONTROL" testpoint to ground, or to +18?

2 - What should the "SENSE" testpoint look like? It seems to be nearly the same whether powered or not.

Thanks,

Eric

WISN did have a CP for some years for a higher night power. I'm pretty
sure it was 25KW instead of 50 though. I don't know if they built it &
couldn't get it to null, or never even tried.

>>

At the time WISN built it's 1130 facility, there were only two 25 kW operations
in the entire U.S.,1130 in Minneapolis (ex-WDGY, now KFAN) and 740 in Tulsa
(KRMG), and these were night operations of unlimited-time stations.

There are three unlimited-time 1130s located between Class I-B WBBR (ex-WNEW)
and Class I-B CKWX.

The Detroit 1130 operates with two towers days (50 kW) and nine towers nights
(10 kW).

The Milwaukee 1130 operates with six towers days (50 kW) and nine towers nights
(10 kW).

The Minneapolis 1130 operates with six towers days (50 kW) and nine towers
nights (25 kW).

All of the above-mentioned stations utilize the north-south columns of towers
for pattern shaping and additionally to protect Class I-B KWKH, which is
located roughly south of the stations.

1130 is one of the few clear channels which has three co-channel Class I-Bs.
Most Class I-B clear channels have two and a few have only one.

In the case of Class I-Bs on 1130, the New York and the Vancouver, BC stations
are the "historical" occupants. The Shreveport station was a later addition.

WDGY got its 1130 allocation by an exception to the NARBA (re)allocation table.

Actually they are WEST of Racine/Kenosha. WTMJ is out near Union Grove,
just west of Hiway 45. WISN is north of TMJ, just west of 45.

WISN is running 10kW night 3X4. Cant remember WISN running 25kW...but my history is limited.

Good ol WAUK (about 2 miles from me) is still up and running. They put up new towers about a year ago. They needed to!

WISN sure does have an interesting signal path. I have been DOWNTOWN Milwaukee in the winter, and heard WBBR over WISN. BUT, WISN does a killer job up north...out placing KFAN in many places you would think KFAN would be dominant.

I also have pics of KFAN on my web page as well.

If KFAN can do it...why couldn't WISN? Just curious.

I have been trying to get a hold of the engineers at WISN, but they will not respond. oh well

WISN sure does have an interesting signal path.
>>

Pretty much average for a "side fire" array with back-side cancellation using an "end fire" array.

The other 1130s are designed and constructed in the same way.

The main differences are the "major spacing" (east-west), which directly influences the beam width, and the "minor spacing" and the parameters used in the north-south array to achieve cancellation.

Protection of the New York and Vancouver Class I-Bs is effected by the "side fire" arrays in each of the cases mentioned.

Pattern shaping and protection of Shreveport is effected by the "end fire" arrays in each of the cases mentioned.

>>

KFAN (ex-WDGY) was first on 1130 after being moved from another frequency (it was not originally co-channel with WNEW and CKWX).

So, WDGY built a 50 kW-D, 25 kW-N antenna system which protected only New York, Vancouver, and Shreveport.

Later, the Detroit 1130 was "dropped in" between New York and WDGY.

Still later, the Milwaukee 1130 was "dropped in" between WDGY and the Detroit 1130.

So, the greatest restrictions are placed on WISN, the next greatetest on the Detroit 1130, and the least on KFAN.

KFAN applied for greater than 25 kW nights once the restriction on specific powers was lifted. I recall 30 kW was applied for, but was never built.

50 kW nights is probably technically infeasible for any of the Class II-B 1130s, using the present number of towers.

The name of the town is North Cape, which is near Union Grove. Since
Racine and Kenosha are on Lake Michigan, it would be difficult to be
EAST of them.

From: Gary Schnabl <badBadger@badBadger.com>
Message-ID: <3936F191.BE7FCB5B@badBadger.com>
Source record: 19324

That was a while back. I attended Marquette University HS and later Brookfield Union Free High (now Brookfield Central). My folks lived on Anders Court at the intersection of Pilgrim Road and Burleigh Place. WAUK's transmitter site then was right next to an old Cold War Nike base, a bit to the north east. That whole area is a giant peat bog. I drove my Harley through it at times; it was bumpy. There was a drive-in movie about 1/2 mile west on Hwy. 59. Perhaps it's still there. Years later, I myself lived on on a farm on Hwy 59 three miles south of Evansville (town of Magnolia), 27 miles due south of Madison.

I was the second CE WAUK had. Aden E. Randall was CE way back in 1947 when it was first licensed at 250 W. I ran a 4CX1000A ham rig in a rack at 4000 plate volts into my own power divider/phaser and into the two tower array on 75/80/160 meters. I would work stations in Argentina, among others, on 75 meter SSB and they would mention that they could hear no other US stations. Those radiators were 5/8 wavelength high on 75 meters.

I believe I was using 1 KW or so as a ham! It could deliver about twice that into WAUK's dummy load. It used an older unused remote control that the station had in storage. There was a 5200 volt pole pig plate transformer that I purchased from the power utility in Milwaukee for $9.65 (salvage value). I even used the station's AM AGC compressor/limiter and my own classic RCA 44 mike. The 20 KW FM was atop Tower 1. They still used a broadcast studio at 330 Wisconsin in town. So I had the place to myself at night as a ham station! It would take me about 3 minutes to switch the array from ham to broadcast use. I used spades and large clamps with heavy copper braid to do the manual switching.

So you believe that WISN does have 12 towers. Another poster mentioned that they ran 9 towers at night. I could have sworn that they had 12 towers back in 1965. They were operating a CP on and off at 25 KW at night. They were hoping that they could eke by at 25 KW, maybe 50 KW, at night. But their night array was never up to it, I guess.

I got drafted and was a permanent party cadre TV director in the HHQ company at Fort Lee, VA, the site of the Quartermaster Corps School brigade for some 20 months. While I was in the US Army in Virginia, I was employed simultaneously at 1140 KHz WRVA, a 50 KW clear channel and super-high powered FM running C & W. I went through some of their archives and came up with some FCC and earlier FRC correspondence involving adjacent-channel WISN, whom WRVA was co-protecting back to the 1920s and 1930s.

Later I worked at WTSO (Ten Seven O) on 1070 KHz for three years in the 1970s. They had a 3 X 2 array running 10 KW days and 5 KW at night

on Tower Road a couple of miles south of MacFarland. That would put it
in MacNotSoFarLand!

2270. Looking to Pay Tapers in Phoenix

Newsgroup: rec.radio.broadcasting
Date: 2000-06-01 00:00:00 UTC
From: natlairchk@aol.com
Message-ID: <20000601233703.01877.00000275@ng-fj1.aol.com>
Source record: 19326

The National Aircheck is looking for two new tapers in the Phoenix area.
No, you won't get rich from this...maybe an extra $500-$600 per year.

If you are interested, please email Linda Cross at
Linda@national-aircheck.com or call us toll free at 888-206-9662

Our website is at www.national-aircheck.com if you would like to know more
about what we do.

2271. List of the rec.radio newsgroups

Newsgroup: rec.radio.broadcasting
Date: 2000-06-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8h7j2v$m4k$1@news.hawaii.edu>
Source record: 19327
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O

2272. HELP: Technics 1200 Interfacing

Newsgroup: rec.radio.broadcasting
Date: 2000-06-02 00:00:00 UTC
From: Eric Aiese <aiese@fas.harvard.edu>
Message-ID: <8h7rnalbq1@news.fas.harvard.edu>
Source record: 19328

Still trying to figure this out. What terminals on the circuit board of this turntable are the one(s) to ground/bring up/bring together to start/stop the TT? Technics was quite uncooperative in giving help, somewhat understandably, but I still need to figure this out. I think I've tried everything logical, but no success yet.

I wonder if something may be defective, but no way to check without knowing how it should work. Please; forward any advice you may have.

Thanks,

Eric

>

Use as high a bit rate as posible. Make sure that any processing that has
to be done (ie EQ or compression) is done BEFORE you encode it to MP3 and
send it. Oh yeah, use a licensed copy of your MP3 encoder!

2276. Apply by June 15! [WILL-AM-FM] Traffic Manager position open

Newsgroup: rec.radio.broadcasting
Date: 2000-06-02 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <393862f6.92888720@news.cso.uiuc.edu>
Source record: 19332
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

Broadcast Research Operations Specialist
TRAFFIC MANAGER
WILL-AM/FM, Division of Broadcasting
University of Illinois at Urbana-Champaign

STATIONS: WILL-AM&FM are the radio stations of the University of Illinois, located in Urbana-Champaign. WILL-AM is a 5,000 watt station that serves much of Illinois and western Indiana with a news and information format. WILL-FM is a 105,000 watt station that serves east central Illinois with predominantly classical music programming. AM has been on the air since 1922, FM since 1941. The stations broadcast 24 hours a day, are licensed to the University of Illinois and have a strong regional presence. WILL has recently moved into new facilities in Campbell Hall on the University campus.

LOCATION: The University of Illinois is located in Urbana-Champaign, 135 miles south of Chicago, 180 miles northeast of St. Louis, 120 miles west of Indianapolis. The University setting (37,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreational facilities. Local schools, libraries, and shopping areas are excellent.

POSITION: This is a full-time academic-professional position. The Traffic Manager is a member of the WILL Radio management team and reports directly to the Radio Manager. The Traffic Manager supervises broadcast traffic operations of the radio stations and works closely with the AM and FM program directors, the operations supervisor and the corporate support staff.

RESPONSIBILITIES: The person in this position:

Works with program directors and the operations supervisor, as a member of the programming team, to anticipate and solve problems related to traffic, operations and programming. Specifically, reviews operations reports, corrects traffic/operations problems and/or forwards reports to appropriate department. Maintains files of these reports.

Collects programming requests from program directors, produces a daily recording service schedule and updates it as needed. Schedules refeeds and makegood feeds.

Works with program directors to organize recorded programs based on their intended use for delayed broadcast or archival storage.

Prepares daily program schedule, including all program times and source information, underwriting, promotion, fundraising announcements and other spots as needed. Updates schedule with last-minute changes. Gets underwriting announcements recorded, proofs copy as needed, and prepares underwriting log and proof of performance reports as requested.

Reviews messages on the Direct Access Communication System (DACS) from National Public Radio, forwards messages and other program materials to appropriate department.

Assists in the development of station-wide systems appropriate to a newly-acquired computer-based audio platform and new audio recording technology and media.

Writes promotional copy for programs as requested.

Tracks use of tapes and discs and orders stock as needed. Labels tapes and discs for taping/broadcast as needed. Arranges for replacements of impaired programs; has copies of programs made when requested by other stations.

Supervises a half-time assistant and is responsible for the accurate and timely performance of that assistant in areas such as tape check-in and delivery to master control, tape return to sources, and keeping records of designated program tapes and discs.

DESIRED QUALIFICATIONS: A baccalaureate degree is required. The ability to work as a member of the programming team to anticipate and solve problems in traffic, operations and programming is required. The ability to handle large amounts of detailed information, and the ability to organize and manipulate that information with few errors, is essential. Full understanding of broadcast system operations and satellite program delivery systems must be demonstrated. Some familiarity with computer-based audio networks and traffic software programs, and some experience in traffic and operations in a public radio setting, is desirable. Ability and experience in writing promotional copy is also desirable.

SALARY AND BENEFITS: Salary commensurate with experience. Excellent benefits: Twenty-four days paid vacation annually, paid health insurance, paid life insurance, sick and disability leave, university retirement system, and other benefits.

TO APPLY: Send a complete resume with a cover letter and the name, address, and phone number of three professional references to the address below. Receipt of application will be acknowledged. In order to receive full consideration, applications must be received by June 15, 2000. Start date July

10, 2000.

Dan Simeone, Station Manager
WILL-AM-FM
Campbell Hall for Public Telecommunication
300 North Goodwin Avenue, Urbana, IL 61801-2316, (217) 333-0850

The University of Illinois is an Affirmative Action/Equal Opportunity Employer.

What if the mp3 is e-mailed, then converted into some other sort of file,
such as a WAV file, and then sent out via satellite? Wouldn't that correct
any deterioration problem for the future?

2282. Rare Rock and Roll, New Shows and a new DJ from Canada all on Rock-it Radio.

Newsgroup: rec.radio.broadcasting
Date: 2000-06-04 00:00:00 UTC
From: Benton Owsley <rockitradio@earthlink.net>
Message-ID: <u7A_4.7548$NT4.248612@newsread1.prod.itd.earthlink.net>
Source record: 19338
Cross-posted to: alt.radio.broadcasting,rec.radio.broadcasting

Hello Oldies fans,

First off a big thank you to those that have sent us best wishes, things are better now and we are ready, and back to keep that Rock-it flying, and thanks to Debbie Snowdove over at our sister station First Nations Broadcasting (http://www.palmsradio.com/upnorth.html) for covering for us last week. And we are happy to say we have a new DJ on the Rock-it ranks. Show #170 is brought to you by Al "Cool Daddy" Smith from Brampton, Ontario Canada. If you remember about a month ago in a Rock-it news bulletin we offered listeners a chance to be guest DJ's on the Rock-it. Well Al wrote back to us here at the station and we gave him the details and he has sent us a show with some pretty great tunes on them! So, here is the playlist of show #170.

1. Jivin Around Pt. 1 - Ernie Freeman Combo. 1957
2. Down the Road - The Cadillacs 1955
3. I done told you so - Gene Simmons 1957
4. Let's Jump tonight - Chuck Willis 1951
5. Whole lotta shakin' goin on - Big Maybelle 1955
6. Cindy Lou - Dick Penner 1957
7. Oh Why? - Little Richard 1956
8. Slippin and Slidin' - Little Richard 1956
9. Goodbye to love - The Chantels 1959
10. Bluebirds over the mountain -- Ritchie Valens 1958
11. Donna (Take 1) - Ritchie Valens 1958
12. Pink Peg slacks - Eddie Cochran 1956
13. Tweedle Dee - Elvis Presley 1954
14. Beautiful Delilah - Chuck Berry 1958
15. Adorable - The Colts 1955
16. Down in the Alley - Ronnie Hawkins 1989
17. Rock n Roll call- Louis Jordan 1956
18. Jivin around (part 2)- Ernie Freeman Combo 1957
19. Dumplins -- Ernie Freeman Combo 1958

To tune into Show #170 just go to our archives show approx. 30 min. after this bulletin has been sent - (as it is still being uplodaded) our archives page is at: http://www.palmsradio.com/rockittext.htm and click to show #170.

We are also giving a last call for shows #158 and #159 on the archives page as it will probably be replaced the next couple of days with new shows.
++

For First Time Doo Wop takes the lead

Since the beginning of our own website from 1998 we have had a little internet poll asking our listeners what do they prefer to listen to on the Rock-it. Well for the first time Doo Wop has beaten out Rockabilly. I don't know if this is a change in taste of oldies music lovers or more doo wop lovers are learning about Rock-it Radio.
But as of the 30th of May- 2000 here is the breakdown of the votes so far.

1950's Doo Wop 125 votes 39%
1950's Rockabilly 122 votes 38%
Rockabilly today 76 votes 24%

If you haven't voted yet and you would like to: Just go to the top of our main webpage at http://www.rockitradio.net and at the top of the page where it lists all the other Rock-it pages - Click to the one that asks which you prefer Rockabilly or Doo Wop? And vote from there.
~~~~~~
Remember you can also join the Rock-it Radio listeners club by going to our main website at http://www.rockitradio.net and towards the top enter your e mail address in the box and press the listbot button. And follow the instructions
from there .... it's free and keeps you in the know of what's happening in and on
the Rock-it -- including prizes and give aways.

~~~~~~
In closing just want to let you know that we appreciate all your comments, dedications and requests and e mail us and let us know what you think of our latest DJ Al "Cool Daddy" Smith and we will forward it to him up there in Canada. Also, remember we will do our darndest to get those requests and dedications in and on the latest show... just e mail us at our studios here at rockitradio@earthlink.net

All the best,

Bennie Dingo

Fellow r.r.b'ers...

New edit of Whitesnake's "Here I Go Again": Slow album version intro with uptempo "single mix" (until recently unavailable). This is _not_ the Album version but a brand new edit! It sounds fantastic and I'm making it available to r.r.b'ers only.

You supply the DAT and return postage and I'll dub it at no charge, of course.

Interested? Reply off list please to johnking@kvil.com

Nope. Unless they got it from me 'cause I did the edit.

The "single mix" was unavailable on CD until recently. The single version has more instrumentation (synth fills, etc.), different intro tempo (and lead vocal take as well I suspect) and sounded more "full" (i.e. more produced) as compared to the album version.

For the edit, I used the slower tempo album intro (and first verse) and edited the "single mix" onto it to create a third version. Again, this is _not_ the album version.

If this is identical to the Time/Life "Sounds of the Eighties" version...I'm pissed!

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!
http://wcbn.org/listen.html

Note: This is unavailable between 5:30 and 6:00pm EDT Monday through
Friday. This is because Pacifica will not allow us to broadcast the
Pacifica Network News over Realaudio.

2289. Re: WISN - Was: Daytime 50kws (was CP WMCA)

Newsgroup: rec.radio.broadcasting
Date: 2000-06-05 00:00:00 UTC
From: peterh5322@aol.com
Message-ID: <20000605235323.29350.00002102@ng-fd1.aol.com>
Source record: 19256

>>
So you believe that WISN does have 12 towers. Another poster mentioned that they ran 9 towers at night. I could have sworn that they had 12 towers back in 1965.
>>

WISN was built as 9 towers.

I generally followed the clear channels during those years, and I do not recall WISN ever applying for more than 10 kW at night.

WDGY applied for more than 25 kW at night in the 70s or 80s, but it was never built.

The only 12 tower arrays were 1500 in Detroit (since abandoned for a 9 tower array) and 1190 in Dallas (night only).

There are many 9-tower arrays.

Does anyone know if KGUY is now OKed to operate at night? For the past few days they have not signed off at sunset. If they are, anyone know the power or directional pattern. I was told years ago that they would have a tough time broadcasting at night with CBR-Calgary, Canada.

Thanks.

****
BOB'S NEWS
****
- Bob will be off! Yes, Bob has planned an insurgency mission into Colorado to save his children and will not be broadcasting on Friday, June 9th. However, be sure to listen to Jordan Dorf on his netradiolive show as Bob communicates the status of his mission into that other state.

- According to Superstats, there were 82 page hits to our welcome page last week.

- Where is spokenword now?
So, we all know about Mouth Almighty and it's untimely demise. Love or hate what happened, it did and to date it was the largest CD distribution company for spoken word. So where is the genre now? Short of established personalities like Jewel or Roma Downey putting out "spoken word" efforts, does spoken word have the ability to reach a mass audience? And, more importantly, does the mass audience care?
Currently, independent labels are trying to fill the gap. Companies like Ozone music (www.ozonemusic.com) and Deezal Records (www.invisiblerecords.com) released albums last year. But to what audience? Whom are they trying to reach? Is the demand out there?
Companies like Rhino play it safe, Rhino's Word Beat label put out the Our Souls Have Grown Deep Like the River, hedging their bets with heavyweight poets like Rita Dove, Langston Hughes and even Public Enemy.

The one thing all of the aforementioned releases have in common is simple, they are all compilations, not CD's of one artists work. It's almost as though performance poets (and storytellers for that matter) have already

reached that point where they are sold on TV just like those "do you remember the greatest hair bands of the eighties hits?"

How does this change? It must begin with the artists. they must work together. In working together they have garnered the attention of media heavyweights such as MTV, NPR and even CBS. They must also understand that there is no instant fame formula that you drink each morning to become a star. Much of the frustration that artists felt regarding Mouth Almighty can be attributed to those feelings of betrayal, those, "it didn't work- it must be their fault." attitudes.

Then it is up to the audience, the audience must be sold on the value of the medium. Who cares and why is some person screaming at me about breakfast cereal entertaining? Good artists capture their audience in curiosity and interest and avoid just bashing their skulls in.

Once these two things occur, the record companies will sniff the opportunity and come running. there will be no need to sell yourself, you will have already done the work with the stuffed venues you play to every nite.

- Send your opinions and thoughts to Bob@spokenworld.com .

- As always, feel free to send us your material and let's see if we can get it on the air. Comedy, performance poetry, storytelling, whatever. If it's spoken word, we'll at least listen to it. email, yeah, you got it, bob@spokenworld.com for more details.

- Join the Spokenworld2U list. talk to others that enjoy spoken word as much as you do. email list@spokenworld.com and type in the body of your message: subscribe spokenworld2u "your name". That's it!

****
RADIANT READINGS
****
Radiant Readings, hosted by Sharon Skinner
Thursdays at 7:45p-8:45p PDT
Archived Shows available at the Radio Show Website

Sharon Skinner reads the work of both Classic and Contemporary Authors, providing insight and discussion into their work. The initial show featured the work of Christina Rosetti and is available for listening to at the SpokenWorld.com website (http://www.spokenworld.com/radio_show.htm). This week Sharon read and discussed the work of Anton Chekhov. Coming this week is Maya Angelou.

****
THE WAR WITH COLORADO
****
there are no updates in the war with Colorado. They still refuse to surrender.

****
NEW ON SPOKENWORLD.COM

****
Week of June 4th has the debut CD of the week to be What's the Word, Volume I, a compilation by Deezal records. We'll play a different track each nite for you to hear.

- So far . . .
Our poll on the website so far has 11% of the visitors saying that PSI should license venues to use the term 'slam' and 88% saying no. Vote early and often in this critical poll. The poll will be up through the month of June.

- New site changes-
Nothing

****
THE TOP 10
****
Ditched For Now

****
ANNOUNCEMENTS
****
Got a spoken word announcement? Send it to me at Bob@spokenworld.com. First 5 received (and printable) will go in next week's newsletter. Oh Yeah, we'll put it on the site too . . .

Battle of the Poets Championship Slam

The Battle of the Poets Championship poetry slam will be held at Brenner's Brew, 21 East Commerce Street, Bridgeton, New Jersey at 8:00 p.m., Saturday, June 10 2000. The event includes an open mic, a featured poet, and the slam. Rebecca Henderson and Christopher J. Fortin from Providence, Rhode Island are the featured poets on June 10, 2000. Rebecca is a member of the 1999 Providence Slam team (bio attached) Christopher is the Poet in Residence at the Down City Slam in Providence, Rhode Island (bio attached) The 1st, 2nd and 3rd place winners from March 1999 to April 2000 will compete for the championship title. Cash prizes for the 1st, 2nd, & 3rd place winners. First place slam winner receives a cash prize of $25.00. The open mic poets are automatically entered into The Starving Artist drawing. Tickets are $5.00. The Battle of the Poets slam also sponsors a food drive at every slam. Non-perishable food items are collected at the door. All the food collected at the slam will be donated to the Salvation Army Food Bank.
.. The sign-up for the slam is from 7:30 P.M. to 8:30 P.M. For more information contact Linda Stehling at (856) 423-2686 or e-mail Linda@theunspokenword.com or call Brenner's Brew at (856) 451-5885

Would be interesting to hear "Classic AT40s". As far
as releasing them to the public, the big problem would
be clearances. I've heard a Saturday morning show on
KOMA where they do a countdown from a specific date
(from when KOMA was T40) and play hits, stiffs and
all.

2297. [WILL-AM-FM-TV] Art Director position open

Newsgroup: rec.radio.broadcasting
Date: 2000-06-05 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <393c14ab.335026185@news.cso.uiuc.edu>
Source record: 19347
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

POSITION AVAILABLE
Art Director
WILL AM-FM-TV
UIUC

STATIONS: All stations provide non-commercial, public broadcasting services and have a strong regional presence. WILL-TV is the PBS station serving east central Illinois, a market of 330,000 households. WILL-AM, a 5,000 watt NPR station, serves much of Illinois and western Indiana with a news and information format. WILL-FM, a 105,000 watt station, serves east central Illinois with predominantly classical music programming. AM has been on the air since 1922, FM since 1941, and TV since 1955. Stations are housed in a new public telecommunications center, Campbell Hall, and are licensed to the University of Illinois at Urbana-Champaign.

LOCATION: The University of Illinois is located in Urbana-Champaign, 135 miles south of Chicago, 180 miles northeast of St. Louis, 120 miles west of Indianapolis. The University setting (37,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreational facilities. Local schools, libraries, and shopping areas are excellent.

POSITION: Regular full-time academic-professional appointment. Employee is a member of the Development Department of the Division of Broadcasting of the University of Illinois. Reports directly to the Director of Development and works closely with other Development Department units, including marketing, membership, major gifts, and corporate support. Also works with television production staff and with Internet operations staff.

RESPONSIBILITIES: Has primary responsibility for management of the visual image of the WILL stations through print materials and other visual mediums. Supervises and evaluates work of art unit staff in print, broadcast, set, and web design. Provides art unit leadership; manages unit workload. Creates visual materials. Monitors unit computer system.

DESIRED QUALIFICATIONS: Baccalaureate degree in graphic design or related field required, graduate degree preferable. Minimum three years professional experience in graphic design or related field required; five years preferable. Design talent and leadership ability essential. Must have strong organizational

skills as well as project management and administration experience. Minimum one year supervisory experience; proven ability to work well in client relationship. Must be proficient in use of Macintosh, including use of PageMaker, Freehand, and PhotoShop. First-hand knowledge of printing industry, understanding of basic principles of marketing necessary. Hands-on experience with broadcast, set, and web design desirable but not required. Understanding of and commitment to the goals of public broadcasting, and compatibility with a university environment are also criteria. Candidates will be asked to present portfolios of their work to demonstrate expertise in the field of visual communication.

SALARY AND BENEFITS: Competitive salary commensurate with experience. Excellent benefits: twenty-four work days paid vacation annually, paid health insurance, paid life insurance, sick leave, disability leave, university retirement system, and other benefits.

TO APPLY: Send a complete resume and name, address, and phone number of three professional references to the address below. Receipt of application will be acknowledged. To receive full consideration, applications should be received no later than July 21, 2000. Position available August 28, 2000.

Valerie Gadbury
WILL AM-FM-TV
Campbell Hall
300 N Goodwin Avenue
Urbana IL 61801-2316
217-333-1070

AFFIRMATIVE ACTION/EQUAL OPPORTUNITY: The University of Illinois is an affirmative action/equal opportunity employer.

On 2 Jun 2000 22:23:58 -0400, in rec.radio.broadcasting you wrote:

>Hey I was thinking...why doesn't CC or Watermark re-release all the Original AT
>40 shows on CD?

can you imagine the copyright issues???? not to mention the cost of
licensing the original recordings, ascap/BMI licensing......it all
costs money...that is of course IF you could get clearances for
EVERYTHING...I mean, what's a top 40 countdown if you can't clear
EVERY song for CD release.

still.....for broadcast purposes, it may be practical...assuming they
have everything....assuming there's a market for vintage countdowns,
and if bidding on vintage vinyl LP's on e-bay is any indication,
there's at least a small market for it.

And furthermore why hasn't any oldies
>formatted station chosen to run these shows from yesteryear? I would run them
>not in yearly order but week to week in various years...
>whattya think??

half the problem is getting a sufficient supply , unless AMFM (now the
owners of AT40, as they bought out merrill shindler) and Casey do some
reissuing....they have on a very limited basis...the first show was
sent out on CD as a promo item from AMFM to new AT40
affiliates.......last I saw some of the 3 CD sets were going for
$100's on e-bay....which made me decide to hold onto some of my
vintage 70 and 80's vinyl shows......sorta vinyl gold these
days...every since the book came out.

As far as I'm concerned they're not compatible without some sort of interface.
At one station someone before me connected the start/stop contacts directly to
the Radio Systems console's switching transistors. It caused the turntables to
behave irratically. Also the console's channel on button also stops the
turntable which I consider unacceptable. What I did many years ago was to
design and build an interface for the Technics 1200 that allowed you to only
remote start, not remote stop. Unfortunately the station has been sold and I'm
no longer with them and I don't remember the circuit.

Actually, rather than striking terror int the hearts of management.
Other affiliates will be reluctant to do remotes with Imus.

The Imus show lost an affiliate and will have legal hassles if the
station decides to sue. Doesn't sound like a winning proposition to
me.

It's great to have Peter H. back in the group!

His comments about the commonality of multiple towered AM arrays is correct. And if you want proof, look at the Broadcast Station Location Page (http://207.91.54.150/radiostation) listings for Houston, Texas. There you will find several stations using at least 5 towers for their patterns:

KBME-790 4 day, 8 night
KEYH-850 5 day
KLAT-1010 6 day, 7 night
KENR-1070 11 day, 9 night
KETK-1110 6 day

Just about all of them shoot their signals into the Gulf of Mexico. Peter, any insight into the KENR-1070 array.....seems to be a weird one! I assume they protect co-adjacent WNOE-1060, KRLD-1080 as well as the 1070 in Alice, TX.

2305. So Many Towers, So Little Coverage

Newsgroup: rec.radio.broadcasting
Date: 2000-06-06 00:00:00 UTC
From: R J Carpenter <rcarpen@erols.com>
Message-ID: <393D3DFA.5F83@erols.com>
Source record: 19261

Look up WJRO 1590, Glen Burnie (Baltimore), Maryland. They have 5 towers day and 4 at night with 1 kW DA2. It looks to me as though only one of the towers is shared between the two patterns. They certainly have a lot of iron in the sky for rather minimal coverage.

Peter,

Any insight into the KENR-1070 array.....seems to be a weird one!

I assume they protect co-adjacent WNOE-1060, KRLD-1080 as well as the 1070 in Alice, TX.
>>

Not too weird, really.

Forget the 11-tower day pattern for now.

The original operation was 10 kW-D, 5 kW-N into the very same array, so it was 10/5 kW DA-1, even though the FCC classified it as DA-2.

The nine towers are "square" (90 degree included angle).

The east-west ("sidefire") towers are spaced about 200 degrees, and there are three in that line, so the beam width (normal to the axis of the towers) is fairly narrow.

The north-south ("endfire") towers are spaced 90 degrees and accomplish perfect (or nearly perfect) back-side cancellation of the "sidefire".

The result is all radiation is directed towards downtown Houston, which is some 20+ miles away.

Now, the real secret of this array is what the hell to do about Alice, Texas. It is very close by.

So, the designers apparently specified 200 degree towers, and as most folks know, a radiator taller than 180 degrees has a lobe at 90 degrees and a complete null somewhat lower than 90 degrees (to the vertical).

So, the array is arranged for skywave cancellation of the close-in, co-channel station in Alice, Texas.

The only other significant co-channel stations are KNX (Class I-B, 50 kW, ND1), Los Angeles, and CBA (Class I-B, 50 kW, ND1), Moncton, NB, each of which is 1,500 or more miles away (the other Class IIs don't deserve protection).

Now, after the huge 3 by 3 was built, and it was built far north of Houston as was previously mentioned, the city moved further out. There is now a significant suburb to the north-northeast of the Tx site.

So, the designer installed two additional towers, these being "only" 90 degrees tall, and located these east-northeast and west-southwest of the reference (center) tower.

The action of the two, new towers maintains most of the radiation towards downtown Houston, preserves the null towards Alice, Texas, yet sends nearly the pattern RMS (10 kW days, equivalent) towards the new suburbs to the north-northwest.

The original 3 by 3 is still used at night.

WNOE, being a Class II-B, does not deserve first-adjacent channel protection at night, but KRLD, being a Class I-B, certainty does.

My guess is the near zero radiation towards Dallas, as a consequence of the overall array design for KNX and CBA (and for Alice, Texas) is more than enough for KRLD's protection.

Several decades ago I plotted the (theoretical) vertical field towards Alice, Texas and the vertical angle cancellation thought to be achievable by those 200 degree towers certainly was.

BTW, KENR has the most "steel in the air" of any station I know of ... not even considering the two added 90 degree towers ... nine 200 degree towers on 1070 is about 4,575 feet of steel in the air.

BTW, BTW, of those stations you mentioned in your post, 1010 is two-site, so it has 13 total towers.

I'm thinking that waaaaaaay back in the dark recesses of Caseys
closets......youll find.....

zoikes

masters or second copies of every at40 hes ever done......

um....with the possible exception of the 'dead dog' story.....

"snarfdude" <snarfdude@hotmail.com> wrote in message
news:393d1d63.773557@SMTP.sprint.ca...
On 2 Jun 2000 22:23:58 -0400, in rec.radio.broadcasting you wrote:

>Hey I was thinking...why doesn't CC or Watermark re-release all the
Original AT
>40 shows on CD?

can you imagine the copyright issues???? not to mention the cost of
licensing the original recordings, ascap/BMI licensing......it all
costs money...that is of course IF you could get clearances for
EVERYTHING...I mean, what's a top 40 countdown if you can't clear
EVERY song for CD release.

still.....for broadcast purposes, it may be practical...assuming they
have everything....assuming there's a market for vintage countdowns,
and if bidding on vintage vinyl LP's on e-bay is any indication,
there's at least a small market for it.

And furthermore why hasn't any oldies
>formatted station chosen to run these shows from yesteryear? I would run
them
>not in yearly order but week to week in various years...
>whattya think??

half the problem is getting a sufficient supply , unless AMFM (now the
owners of AT40, as they bought out merrill shindler) and Casey do some
reissuing....they have on a very limited basis...the first show was
sent out on CD as a promo item from AMFM to new AT40
affiliates.......last I saw some of the 3 CD sets were going for
$100's on e-bay....which made me decide to hold onto some of my
vintage 70 and 80's vinyl shows......sorta vinyl gold these
days...every since the book came out.

2311. VU Meters the History

Newsgroup: rec.radio.broadcasting
Date: 2000-06-07 00:00:00 UTC
From: Robert Jeffares <robert@pnn.org.nz>
Message-ID: <B5643EFD.3354%robert@pnn.org.nz>
Source record: 19267

I am writing a piece about the VU meter for new entrant broadcasters and I want to get a picture of the *PROPER* VU meter to include along with some history.

The only meters I can find are old and faded [no jokes please]

Who defined the VU meter?

Why is 0VU set at +4dbM? There has to be a reason!

Yes 0VU is also 100% modulation. No problem with that.

Somewhere there has to be a standard definition.

We were told the facts and accepted them as such.

Today I wondered who? why? Because that's what I am going to be asked.

be keen to get any comments directly but will check here

thanks

Who defined the VU meter?

Why is 0VU set at +4dbM? There has to be a reason!

Yes 0VU is also 100% modulation. No problem with that.

Somewhere there has to be a standard definition.
>>

The "Standard Volume Unit Indicator" was defined in about 1938 by a group consisting of Western Electric and a few industry types.

The sensitivity is such that when the 3900 ohm meter is placed across a *terminated* 600 ohm line, 4 dB above one milliwatt will register zero on the meter.

There are two scales: "A" and "B". One emphasizes dB, the other emphasizes modulation percentage.

100 percent modulation is +4 dBm (not zero dB or zero VU).

But ... most broadcast applications are 0 VU = +8 dBm (dB above one milliwatt into a 600 ohm load).

The meter dynamics (overshoot, etcetera) are quite specific.

The meter rectifier must be a copper-oxide type rectifier to be a gen-u-wine VU meter.

Most of the specs are in old IEE journals, or in Weston's 1938 catalog.

2319. Re: Measuring tower height

Newsgroup: rec.radio.broadcasting
Date: 2000-06-07 00:00:00 UTC
From: SidS1045@aol.com
Message-ID: <c3.65da9da.266fc45a@aol.com>
Source record: 19275

>I've read tower height references being referred to in degrees of height. What is the formula to convert degrees of height into linear feet? Just curious in determining the tower height of some of my favorite AM arrays given the degree measurements.<

There are three steps to this process.

1) You must determine the length of one wavelength at the station's frequency. To do this, divide 300,000 by the frequency in kilohertz. You will come up with the wavelength in meters.

2) Multiply the wavelength in meters by 3.28 to get the wavelength in feet.

3) Multiply the wavelength in feet by X/360 to get the tower height in feet, where X is the height of the tower in degrees.

I got one of those at the '99 NAB, signed by Casey but there is a problem...
It was heavily edited.
Each hour ends with an abrupt cut that segues into the closing theme that
wasn't introduced until some time in the mid 70's.
Up to that point, the open/closing theme was the same.
At the end of the program, no credits of any kind, not even a goodbye from
Casey. As the #1 song fades out Casey says, "Mama Told Me-Three Dog Night",
then the closing theme runs.

Hi Jamie,

Scotty Matthews here--Creative Services/Production director for WNTQ / WAQX / WLTI / WNSS in Syracuse. I can tell you honestly, there isn't a decent DAT player to be had for under $700 if you're buying them new. The best I've seen is the Panasonic SV-3700, which is great for studio use, and is manufactured for professional applications. Mechanically, it's as solid as the old ITC Delta cart machines.
If I were buying one, I'd go with a low-end Sony deck. The loading mechanism is far more delicate than the Panasonic, but the price tag is about half. I would advise you to stay away from Tascam machines, even though the price is tempting. They are not very user friendly, and they take a long time to initiate functions after you've pressed the button. Most people find them very frustrating to use.
I would recommend that you check-out online auctions like eBay. Dat machines routinely sell for $400-$500 there. The only hitch is, you can't test-drive before you buy--but all the transactions are insured by Lloyds of London, so you're pretty safe. Click the link below for current eBay DAT machine listings:

http://search.ebay.com/search/search.dll?MfcISAPICommand=GetResult&ht=1&SortProperty=MetaEndSort&query=DAT+machine&x=11&y=17

2) Multiply the wavelength in meters by 3.28 to get the wavelength in feet.

3) Multiply the wavelength in feet by X/360 to get the tower height in feet,
where X is the height of the tower in degrees.
>>

A method that has worked for me for decades is ...

wavelength (in feet) = 979 / frequency (in megacycles).

Example: 200 degrees on 1070 is ...

(200 / 360) * (979 / 1.07) = 508.81

which is pretty close as the license says 510 feet.

The use of 979 may seem odd, but it is intended to compensate for the fact that
a radiator that is thicker than "infinitely thin" will be electrically taller,
for the same physical height.

2323. Looking for array in Chicago

Newsgroup: rec.radio.broadcasting
Date: 2000-06-07 00:00:00 UTC
From: writeit@execpc.com
Message-ID: <393E7EF1.9300C6B6@execpc.com>
Source record: 19279

I am usually just a lurker on the newsgroup, but I have been reading what has been happening. I know this may be a question that has lots of answers, but I am wondering who knows of a tower array (don't know exactly how many) that is on a hill in Chicago. Can anybody identify one or more of those and tell me exactly where the arrays are? They had a special meaning to Bill Pfeiffer, but I have no idea what he might have been talking about, so I am now trying to find out.

For information update, the Airwaves web site has been updated since Bill's death in September, but has not been updated since about January, even though the Christmas message has stayed on it because of it's meaning. Also, even though the newsgroup is robomoderated, it is being monitored by humans, just not as extensively as Bill was doing it when he was actually moderating.

Incidentally, Saturday, June 10, would have been Bill's 45th birthday. Some of his friends and radio colleagues will be celebrating his birthday (not a wedding) for him this weekend, including me who shares that day as a birthday, but will only be celebrating 35 years.

Watermark reran that first show (7/5/70) again for the weekend of 7/4/75. I have the vinyl pressing for the latter (in 1970 they were still sending shows on reel). The 1975 show ended that same way -- he said the name and it went to the safety music...I suspect they were running more commercials in '75 and needed to clear time from somewhere, maybe?

Correct! Which are now simulcasting 1600 AM, and not showing up at
all. But that hardly matters since they are being moved out of the
market in a year or so (to allow KXGM Muenster to upgrade to 100 kw and
cover DFW).

KLNO did over a 2 share, extrapolated, in the month of April; the format was only about 60 days old. A lot of long-established stations don't do much better than that.

106.7 & 107.9 have a brand new format, soft A/C, and very limited signals. When the projected upgrades go into effect (see the CPs), they will be far more competitive. The same format gets a 5 share or more in LA and a 2 share in San Diego and Houston.

99.1 is the only Tejano station in DFX, and does very well in billing and serves a smaller cume very well. The numbers are very bouncy and have averaged a 1.3 over the last 4 years. Low has been a 0.9 and high has been a 1.6. Does very well in this range, as the station has desirable demos.

KESS is now a heavy sports station. As many know, sports stations bill a ton of money, but get poor ratings. KESS, according to BIA, bills in excess of $5 million.

Some of the defective AMs, like 870, 1360 and 1600, will probably have to find something else to do. 1360 is part of the national Radio Unica network, and perhaps local ratings are not as important as national coverage, since the format gets very poor ratings everywhere yet the company is jumping fast in revenues.

> I could be totally wrong, but I don't see how that many stations can have
so
> few ratings and continue to survive. Someone is paying the freight for an
> awful lot of un-listened to radio stations.

Except for, perhaps, 870, my understanding is that all the stations are profitable. Perhaps not in grand style, but they do make some money. As such, would they make more doing religion or some other niche programming? Probably not. This is as good a use of the channels as could probably be found.

Keep in mind also that Spanish is a language, not a format. There are probably more formats possible in Spanish than in English, so it is not unreasonable to expect a large number of Spanish stations to flourish with the Hispanic population in Dallas-Ft. Worth now exceeding a million.

As I previously reported, KENR/1070, without even considering its two (added) 90 degree day towers has the most steel in the air.

My candidate for second most steel is yet another 9 tower array, CKKW/1090.

There are nine towers of differing heights, but all are over 207 degrees. The average height is 209.86.

The calculated steel is 4712.22 feet, or just shy of KENR's 4775.

KENR beats CKKW by a wide margin if one includes the two added 90 degree towers.

2334. DFW Spanish Radio lays an egg

Newsgroup: rec.radio.broadcasting
Date: 2000-06-08 00:00:00 UTC
From: Tom Desmond <tdesmond@sprynet.com>
Message-ID: <393F1E12.1EDB2775@sprynet.com>
Source record: 19286

I was just looking at the now free Arbitrend listings on R&R's website
-- unlike All Access, they list statoins scoring below a 1.0.

Several interesting items in Dallas-Fort Worth radio. The first is the
abysmal performance of the Spanish language stations in the market,
considering that a couple of these stations have gained upgraded
facilities. In any event, here's the latest:
KDXX/KLNO 1.6 (note that KLNO is a Class C running from Cedar Hill)
KTCY 1.1 (this is actually pretty good for a C1 50 miles north
of downtown Dallas)
KHCK 0.9 (Class C rimshot -- had been as high as a 1.5 last yr)
KESS(AM) 0.6 (5 kw AM -- down from a 1.2 a year ago)
KZMP-A/F 0.6 (FM is a Class C rimshot, albeit with a pretty good
signal -- but ratings were just as good a year ago
simulcasting on two suburban Class As)
Since KLNO is very new (signed on in February), it will take more time
to know for sure, but the preliminary results suggest that the stronger
facilities may not be helping the performance of Spanish radio locally
by much at all.

Other interesting items -- in the oldies race, ABC's soft oldies rimshot
KMEO is on top, besting both long time oldies outlet KLUV and "Jammin'
oldies" KTXQ, both of which has recently imploded in the ratings.

And then there's "Big 570" KLIF -- with a very tiny 0.9. There really
is nothing else to say about that one...

2335. Re: Looking for array in Chicago

Newsgroup: rec.radio.broadcasting
Date: 2000-06-08 00:00:00 UTC
From: Kent <kwin@execpc.com>
Message-ID: <393f1e7e$0$95981@news.execpc.com>
Source record: 19287

Sheeesh, a hill in Chicago?

The only decent arrays I know of (assuming AM towers here) are 1390 WGCI, 1200 WLXX, 950(Whatever the call is this week), 560 WIND. All of these are on the south side. WIND is in Indiana in a swamp. WLXX is a fairly new 9 or 10 tower installation.

That leaves 1390 and 950. Neither to the best of my knowledge are on a hill.

Other arrays include 1160 WSCR which is just north of O'Hare on I-294, 1000 WMVP (The old WCFL) which is south of O'Hare (pictures on my web site), and a few very small stations.

Knowing that Bill liked radio history, I would place bets on the 1000 WMVP (Old WCFL) site. Location is at (sorry for the long URL):
http://tiger.census.gov/cgi-bin/mapsurfer?on=railroads&on=streets&ht=0.25&wid=0.25&lat=41.81&lon=-87.988&mark=-87.988,41.81,bigdot,WMVP

> about half.

There are also SCMS issues with the Sony consumer decks that can create problems down the road, especially if you dub DAT to DAT. I stopped using consumer DATs in my studio for an number of reasons, this was a big one. Very few things that will drive you as mad as being up against the clock and finding that a consumer DAT deck made the tape you're needing to copy to get to a client. Small matter to use the audio inputs, instead of the digitals, but then you have to repatch, or take the board out of other service. When every second counts, this can be expensive.

One of the other issues, is, as you point out, the fragility of the Sony's transport mechanism. Failure is frequent. One of my business associates has sent his Sony's back for transport repair, service or adjustment more frequently than I have had to clean my SV-3700s. And Sony Service is NOT user friendly. He winds up using my studio for weeks on end waiting for his machines to come back. For the money he has dumped into his Sonys, he could have had SV-3700s, or its later incarnations, and had no down time.

I bought a DAP-1 for field use, and studio back up. Functions are
very slick for me. Start faster than my Panasonics. I haven't used
the studio Tascams, though. The Panasonic was just too well built.

Not a bad suggestion. Figure that 1 in three will have to go back
for a tune up. But remember also that you get what you pay for, and
if you buy quality, and pay for (and receive) quality service,
you're ahead of the game, when the game matters.

2337. Re: Here I Go Again/Whitesnake-NEW EDIT now available!

Newsgroup: rec.radio.broadcasting
Date: 2000-06-08 00:00:00 UTC
From: John King <jrkingjr@gte.net>
Message-ID: <miG%4.394$yS3.270417@paloalto-snr1.gtei.net>
Source record: 19289

ummm....

OK, one more time. Maybe I didn't explain it clearly first time out. :)

Two versions of "Here I Go Again"/Whitesnake.

Version One: Album version. Mellow intro and first two verses then kicks into flamethrow hairband rock at the chorus.
Version Two: "Single mix" or "radio version". Released to radio stations and on 45 rpm single. Not available on CD 'til 1994. Different intro. Different length. Different lead vocal take. Flamethrow hairband rock from the get-go. Same tempo, same intensity all-the-way-through with additional instrumentation, synth fills, more guitars, fuller mix. After hearing this version, the album version sounds...well...sparse.

Okay...here's what I've done.

I've taken these two different versions and have edited them together to form a NEW EDIT...using the mellow album version intro and when it kicks in to flamethrow hairband rock -- it's the "single mix" or "radio version".

And it turned out so well, I thought other radio stations would be interested in a dub.

Offer still stands.

2338. Re: Measuring tower height

Newsgroup: rec.radio.broadcasting
Date: 2000-06-08 00:00:00 UTC
From: Gray Frierson Haertig <gfh@haertig.com>
Message-ID: <393F3983.FD9F128@haertig.com>
Source record: 19290

Commission records of radiator height in electrical degrees are kept
assuming the velocity of propagation in the tower is equal to the speed
of light. The actual electrical length may be quite different, as Peter
points out.

The AM engineering data base gives tower heights in electrical degrees
if you wish to avoid having to do the conversion.

The meter movement itself has a much lower impedance than 3900 ohms.
Sometimes a suitable series resistor is included in the meter case and
sometimes it is external. The 3900 ohm meter impedance is very specific
to assure the proper ballistics of the movement.

>
> But ... most broadcast applications are 0 VU = +8 dBm (dB above one milliwatt
> into a 600 ohm load).
>

+8dBm is the old standard for peak signal level to be fed an equalized
telephone loop, consequently a 4 dB pad was inserted in the VU feed.

There would be an additional pad (frequently 6 db) between the last
amplifier output of the console and the VU Feed/Telco feed to isolate
the output transformer of the amplifier from the varying input impedance
of the telephone line. Otherwise frequency response was likely to be compromised.

"Jim Burgan" jim@burgan.net asks ...

>>
Does that mean that a 360 degree tower would be a full-wave tower?
>>

Yes. But no one actually uses a full-wave radiator as its propagation characteristics is far from optimum.

Minimum "conforming" radiators are these:

1) Class A (old Class I-A, Class I-B, Class I-N): 225 mV/m/kW at 1 mile (362.10 mV/m/kW at 1 km), or about 180 degrees,

2) Class B (old Class II-A, Class II-B, Class III-A, Class III-B): 175 mV/m/kW at 1 mile (281.63 mV/m/kW at 1 km), or about 90 degrees,

3) Class C (old Class IV): 150 mV/m/kW at 1 mile (241.40 mV/m/kW at 1 km), or about 60 degrees,

For most purposes, the best radiator is about 200 degrees (5/9-wave), and there are more ND Class Is using radiators which are 195 to 200 degrees than any other height.

A 200 degree radiator can produce more than 400 mV/m/kW at 1 km.

There are some radiators which are taller than 200 degrees, but these are rare.

Of the several I am aware of which are significantly taller than 200 degrees, these are sometimes "grandfathered" at the minimim for their class, or 281.63 mV/m/kW at 1 km, when in reality these should be producing more like 425 mV/m/kW at 1 km.

One has to wonder how long it will be before some of the 15 signals doing
spanish language stuff in this area will be sold or turned into something else.

I could be totally wrong, but I don't see how that many stations can have so
few ratings and continue to survive. Someone is paying the freight for an
awful lot of un-listened to radio stations.

>Other interesting items -- in the oldies race, ABC's soft oldies rimshot
>KMEO is on top, besting both long time oldies outlet KLUV and "Jammin'

There's no mystery behind this one - KMEO is the perfect "at work" station.
KLUV and KTXQ are doing everything right too - but they're formats are not as
condusive to listening at work.

>
>And then there's "Big 570" KLIF -- with a very tiny 0.9. There really

What a complete load of crap! I've had Panasonic SV-3700s, SV-3800s, and
SV4100s in my studios for years now. My experince is that i get 2 years
out of them, then I spend the rest sending the machine off to the repair

guy every 2 months. After years of this, thinking they were quality machines that just happened to cost less than the competition, I broke down and bought a Sony R-500. 3 years later, no hiccups, no chewed tapes.

With something as fragile and exacting as a DAT recorder, you get exactly what you pay for. The cheap Fostex, Tascam, and Sony may do the job for a while but they will break sooner than the Panasonics.

Well, aren't you sweet. Nice to meet you, too, Craig. I bought my
SV-3700s now more than 7 years ago. Not one hiccup, chewed tape,
fouled recording. Not one. I clean them regulary, and I use them
every day.

Of the public stations I work with, most use SV-3700's, or 3800's
and they are virtually invisible to the engineering staff. I've
heard of only three returns to teh service center for any of them,
over the 5 years I"ve been serving them.

So, as complete loads of crap go, Craig...this is about as
maintenance free crap as crap gets.

Compared to the 2 Fostex D-5's in the station I work with in
Chicago that have never been right, and have been back to repair
more often than the Sony's. For roughly more than I paid for the
Panasonics. Now THAT's crap.

But it was nice meeting you, Craig. I look forward to meeting you
in person someday. Experience the charm first hand.

2347. Re: Towers

Newsgroup: rec.radio.broadcasting
Date: 2000-06-08 00:00:00 UTC
From: Bill Hale <phantom2@eaze.net>
Message-ID: <39401D30.BF2C3F3C@eaze.net>
Source record: 19299

KLUV-1190 Dallas has 12-200' towers (night array) for a total of . . . 2400 feet.
The daytime site has 4-220' towers (at a different site) for a mere 880'.

KENR-1070 Houston has 9-500' towers plus 2-230' towers for their daytime operation
for . . . 4960'. That's a lot of steel!
The nighttime array uses the 9-500 footers (only).

Been to each site . . . impressed by them all.

WISN-1130 Milwaukee uses 6-218' towers for days (1308') and adds 3 more of the same
height for nights for only 1962' overall.

KFAN-1130 Minneapolis has 6-278' towers (days) and adds 3 more at night for 2502'.

WDFN-1130 Detroit uses only 2-278' towers by day (556'), but by night adds 7 more
278 footers for a grand total of 2502'. Hmmmmm. Same as KFAN. How can that be?
;-)

Think of all that steel cable holding those towers up!! And the ground systems!!!

Bill in Fort Worth

Don't forget WFXW in Geneva on 1480, I think their 5 tower Array is on a
sort of hill, or at least a river bluff, and they are in the greater
Chicago area. They use 4 of the towers during the day, and 3 at night.

Are the Radio Unica stations all taking their programming off the same feed? The Unicas I've heard here in the Northeast (1660 in New Jersey, for example) play music with a definite Puerto Rican/Caribbean flavor. I can't imagine that would play well in DFW, where the Hispanic population is predominantly Mexican. Does Unica customize its music for the market?

How many stations do you know of that have a "Kiss" slogan?

The latest edition of "The Salt Lake City Radio Scene" at radiodigest.com is interesting to say the least. Circumstantial evidence of Clear Channel having/acquiring multiple stations with the "Kiss" slogan is being used to suggest that Rick Dees' syndicated show might be moving to KISN(FM) in Salt Lake. I'm willing to bet that there are more than a handful of stations using that slogan. Other than WFSJ/Jacksonville, FL, KSSN/Little Rock AR, WXCR/Albany NY, KFMS/Las Vegas NV and the previously mentioned KISN/Salt Lake City UT, I know of at least one other station using that positioner. That's WRKS/New York City, owned by Emmis.

There's a KISS-FM in London, a KISS network based in Paris and at least
half a dozen other KISS stations that I know of in continental Europe.

The only thing I ever listen to, and that only occasionally, usually in my car, on "Big 570" KLIF is its simulcast of Ch.8's 6pm local newscast. FWIW, Dallas-owned WRR-FM carries the competing 6pm news simulcast of Ch.5. WRR is a classical music station that, although owned by the city, receives no tax funds and is making a profit. I suspect that KLIF is low in the ratings for very good reasons.

One size fits all... no local programming except local news headline and
traffic inserts.

The ratings are dismal everywhere, including no-shows in places like San
Diego and Dallas.

There are about 100 "Kiss" stations of varying formats around the US. Not
including simulcast outlets, they are:

KARO 103.3 Caldwell/Boise "103-3 Kiss FM"
KBJX 106.3 Shelley/Idaho Falls/Blackfoot ID "Kiss 106"
KBKS 106.1 Tacoma/Seattle "Kiss 106.1"
KCKS 94.9 Concordia KS "Kiss"
KEDG 106.9 Alexandria LA "Kiss 106.9"
KFMS-FM 101.9 Las Vegas "Kiss FM 101.9"
KGKS 93.9 Scott City MO "Kiss 93.9"
KHKS 106.1 Denton/Dallas/Ft Worth "106.1 Kiss FM"
KHYS 100.7 Abilene TX "100.7 Kiss FM"
KIFS 107.5 Medford OR "Kiss 107FM"
KIIS-FM 102.7 Los Angeles "102.7 Kiss FM"
KISC 98.1 Spokane "Kiss 98.1"
KISK 107.1 Shasta Lake City CA "Kiss 107"
KISN-FM 97.1 Salt Lake City "Kissin' 97"
KISQ 98.1 San Francisco "98.1 Kiss FM"
KISR 93.7 Ft Smith AR "Kisser 93"
KISS-FM 99.5 San Antonio "99-5 Kiss"
KIST-FM 107.7 Santa Barbara "Kiss FM"
KISV 94.1 Bakersfield "Kiss FM"
KISZ-FM 97.9 Cortez CO "Kiss Country"
KIYS 101.9 Jonesboro AR "101.9 Kiss FM"
KIZN 92.3 Boise "Kissin' 92"
KIZS 92.1 Broken Arrow/Tulsa "Kiss 92.1"
KKDM 107.5 Des Moines "Kiss 107"
KKMX 104.3 Tri City OR "Kiss FM"
KKSI 101.5 Eddyville/Ottumwa "101.5 Kiss FM"

KKSN-FM 97.1 Portland "Kissin' FM"
KKSS 97.3 Santa Fe/Albuquerque "97.3 Kiss FM"
KLUA 93.9 Kailua Kona HI "Kiss FM"
KLZK 104.3 Brownfield/Lubbock TX "Kiss 104.3"
KPVS 95.9 Hilo "Kiss FM"
KQIS 102.1 Basile/Lafayette LA "102.1 Kiss FM"
KSII 93.1 El Paso "93.1 Kiss FM"
KSIT 104.5 Rock Springs WY "Kiss It 104.5"
KSKS 93.7 Fresno "Kiss Country"
KSSM 103.1 Copperas Cove TX "Kiss 103"
KSSN 95.7 Little Rock "Kissin' 96"
KSSZ 93.9 Fayette MO "Kiss 93.9"

>KLNO did over a 2 share, extrapolated, in the month of April; the format was
>only about 60 days old. A lot of long-established stations don't do much
>better than that.

That hasn't shown up in the ratings. Note -- the format existed in town
and moved to the better signal. That and a lot of media coverage about
how Spanish-language radio finally has a full signal outlet for the first
time in the DALLAS MORNING NEWS and on TV and how needy this was should have
generated something better. Let's also not forget it replaced a station
that ranks around 10th in the ratings. So, a lot of people heard about
its debut.

Note -- the media got it wrong. KLNO is not the first. A 1 minute research
into Dallas/Ft Worth radio history will note that the same frequency was
Spanish-language during the 80s as KESS, KSSA, and KOJO. KOJO flipped to
contemporty Christian in the summer of 1987 and got the KLTY calls later.
The old 94.1 didn't do stellar in the ratings.

Also, I get tired of this stereotyping Hispanics as only wanting to listen to Spanish-language radio. They don't. The McAllen/Brownsville market is 85.1% Hispanic as defined by Arbitron. The top 3 stations are English -- KBFM, KVLY, and KFRQ. The ratings for those 3 themselves is over a 30 rating. Hardly underserved -- dozens of Spanish-language stations on both sides of the border most of which don't even register in the ratings -- it just shows Hispanics, like other folks, listen to multiple formats.

>106.7 & 107.9 have a brand new format, soft A/C, and very limited signals.
>When the projected upgrades go into effect (see the CPs), they will be far
>more competitive. The same format gets a 5 share or more in LA and a 2 share
>in San Diego and Houston.

It's hard to call that tired format "new." The Spanish soft AC format and "Amor" handle were used on the 1480/106.7/107.9 frequencies before they were "Estereo Latino" earning the same low ratings.

>

Sports stations get poor ratings? KTCK in Dallas is getting a 3.4 as we speak. It's #11 overall. KESS is Spanish news/talk/sports. English WBAP is top 5 in the same department.

Here's hoping KLNO does well and the rest adopt something else. Despite all the hoopla, Hispanic Broadcasting and many of the others produce low quality stations that sound small market. Considering the amount of money they have to spend ($65 million for KLNO), they should sound better. KHCK sounds like it could originate from Uvalde, not the nation's 6th largest radio market.

While this is certainly true, that's 1 station out of 15 doing spanish language formats in this area. I think this is certainly one of the spanish stations that should stick around and will probably be a success.

>106.7 & 107.9 have a brand new format, soft A/C, and very limited signals.
>When the projected upgrades go into effect (see the CPs), they will be far

Fine.. but what are they doing now? With a signal upgrade in the offing - it's still a "wait and see" situation with these signals.
(and it's still only 2 of 15 spanish language stations in the market)

>99.1 is the only Tejano station in DFX, and does very well in billing and

By your estimation, there's about 5 spanish language stations doing decent business. Great. That's 1/3 of the spanish language stations in this market. The other 2/3rds have next to no audience.

>Some of the defective AMs, like 870, 1360 and 1600, will probably have to

>found.

I find that hard to believe. Unless they have a tremendous amount of brokered time, there's almost no way for these stations to be profitable.

> Keep in mind also that Spanish is a language, not a format.

Yes.. I never said otherwise. I think 5 or 6 formats are possible over 5 or 6 frequencies. But 15 frequencies with 10 formats fighting over 5 share points is simply too much.

>There are
>probably more formats possible in Spanish than in English, so it is not
>unreasonable to expect a large number of Spanish stations to flourish with
>the Hispanic population in Dallas-Ft. Worth now exceeding a million.

So far, they haven't flourished. It's certainly peculiar that this market hasn't embraced at least one spanish language format enough to push it into the top ten.. and maybe it will. I think there may be some unusual dynamics at work here that will only be discovered after these full power stations have had a chance to prove themselves. The evidence seems to suggest that a large portion of the Hispanic population in DFW is already well served by the non-spanish language formats in the market.

It will be interesting to see how all this shakes out.

The same people who say "Spanish is a language, not a format" don't seem
to get the picture. Just because Dallas-Fort Worth might have a million
Spanish-surnamed people, that million people has very different habits
than
a million hispanics in Los Angeles, San Antonio, or Miami.

Unica is a national satellite-fed network--but the Chicago station (950 AM) is a
news-talk outlet (with hosts including Cristina the Univision host called the
"Latino Oprah"), not a music station. You sure 1660 AM New York is Unica?

>How many stations do you know of that have a "Kiss" slogan?

In Chicago, Big City's metrocast of WKIE/WKIF/WDEK--mainstream CHR "Kiss FM," down to the JAM jingles. Despite the fact that their in-city signal is lousy, have been competitive against established churban WBBM-FM (B96), although the fact that they were initially leaning modern AC in their playlist. If the trends had gone more towards rock, they might be doing further damage against B96 (since Britney/Cristina/Backstreets/'NSync are very dance-leaning).

Well, the format is only about 60 dys old, coming on after the KLNO switch.
The rom&#65533;ntica format was on these frequencies in 1995-1996, and got well
above a 1 share. And that is enough to be successful in the sales area.

The Mark Rodriguez staton (La Mejor) and the Z station licensed to Azle are reportedly doing better than expected. Given the small investments, I'd guess that they are quite happy there. The little AMs are the ones that are in long range jeopardy. However, Unica, with no numbers, is building solid national billings so that may be a keeper, too.

> >Some of the defective AMs, like 870, 1360 and 1600, will probably have to

A 1 share in Dallas can bill enough to be profitable. In the case of KESS, withs ports, a 0.6 represents, per BIA, nearly 6 million in billing. There are a couple of Dalls Spansih-language stations taht probably are marginal, but part of the issue is that Hispanic advertising is growing faster than the number of good stations.

> > Keep in mind also that Spanish is a language, not a format.

I'd guess that the share point potential in Dallas is around a 9 or 10. Generally, in markets where the population is relatively new and

unassimilated, about 60% of Hispanic quarter hors are to Hispanic Spanish language stations.
>

This is true everywhere to an extent. However, newer arrivals will not listen to American music in large numbers as there is a cultural barrier. I myself am pretty bilingual, but never listen to English music after 9 years in the US... I did not grow up on it and I don't like it. Never will, probably.

The real issue here is that there have been very poor stations with poor signals up to now. As programming improves, we should see more stations being ttruly competitive. If KBFB with an average in the mid ones can bill over 5 million, the opportunites for Spansih langage stations to hit that kind of numbers are certainly there... once people can hear them.

Yes it has. The Arbitrends from last week showed a 1.6 share for KLNO. That
is a 90 day trend. There is a rough formula for extrapolation of
single-month numbers, and KLNO was over a 2.0.

>Note -- the format existed in town
> and moved to the better signal.

Actually, Esteroe Latino was totally reformatted with new music research and
an improved staff. It is at least 75% a new station.

>That and a lot of media coverage about
> how Spanish-language radio finally has a full signal outlet for the first

I doubt the core listener of KLNO reads the English press nor do they watch
too much English TV.

>Let's also not forget it replaced a station
> that ranks around 10th in the ratings. So, a lot of people heard about
> its debut.

The listeners to the Christian station were probably unimpressed with the
change, besides the fact that they had been simulcasting for months to get
the listeners over to the new dial position. Simply stated: English
Christian stations don't share much cume with Spanish language stations
where the core listener is Spanish dominannt and 90% or greater of the
Catholic faith.

The Hispanic population in Dallas in the early 80's was only about 25% of what it is now. I participated in a market study that showed that Spanish radio then was barely viable. That in itself was the reason why Marcos Rodriguez (RIP) decided to put Spanish on the inferior AM signal and go English on the FM.
>
> Also, I get tired of this stereotyping Hispanics as only wanting to listen

There are 27 signals in Spanish in the Valley and only about a half dozen good English ones.

Beyond that, the Valley is more like Albuquerque than Dallas: the Hispanics there are in a large percentage very assimilated and are Hispanic heritage but not Spanish-language-dominant.

In markets with substantial portions of more recent immigrants, the overwhelming number listen to Spanish language radio.

True. However, we are discussing a language filter. People usually listen in the language they feel more at home with and to the music and news that they relate to.
>

Wrong. The combo, preupgrade, got into the mid ones before a decision was made to go with the country format. The format is not tired, and is, in fact, #1 or #2 in LA, Miami, Chicago, NY and a number of other places ranging from Puerto Rico (market 13) to San Francisco.

> is top 5 in the same department.

Sports staitons as a rule get horrible ratings. They, as a rule, get
terrific billlings, which is why they exist.

WFAN in NY, the leading billing sports station (and top biller nationally of
any kind of station), seldom breaks a 2 share and is usually around #15 in
NY. KTCK is a rare exception of sports with ratings. The English sports
station in LA gets about a 0.5.

Remember, most sports stations are guy-talk stations, and are not 100%
sports. KESS is about 60% sports, and carries an impressive lineup of
play-by-play, ranging form baseball to soccer. They even have done hockey
games!

According to you or to the listeners? The station sounds good to the target
listener, who may well have different tastes and points of reference than
you do. You may not like laser shots and echo; the KLTO listeners do.

> KHCK sounds like it could originate from Uvalde, not the nation's 6th
> largest radio market.

Tejano is a lifestyle format. KHCK researches very well within the
lifestyle. You are obviously not part of that lifestyle. If you evaluate
radio around the world, you will find that US production values and radio
are not as uniformly popular as one would (like to) think. An example: the
leading news/talker in Argentina (27 share in 15 million population Buenos
Aires) uses pieces of hit songs as beds (not buffers) for news stories and
headlines. To an American ear, it sounds dreadful. To local listeners, it
researches through the roof.

You might try changing perspective and you could see that what you think is good is probably not uniformly perceived the same way by persons of different backgrounds.

Yes, I must say, experiencing me first hand is something.

Getting back on topic, if you've gotten 7 years daily use out of a 3700
you deserve a hero biscuit! In the last 7 years I and my associate have
worn out 2 SV-4100 instant starts, 2 SV-3700's and a 3800. Heads are

cleaned when required (... yes we use the menu's to check the error count ...), but not on a schedule - dry cassette cleaner when we can't get an engineer in, full alchol cleaning when we can. We used 3M/Scotch cassettes before they left the biz, and usually BASF since.

Because we only got budget approval for non-linear editing for only one of our studios in the last 20 months, we where using the DATS for voice tracking (as well as archieve) before transferring to ADAT. I doubt that most users out there could be any more usive/abusive than we were. As I mentioned the Panasonics would hold out for 2 years before raising the white flag. After opening them up a number of times to un-jam tapes, I don't think that they are all that well built. I also have to add that the 4-motor tape system in the Sony is much more gentle on the tape during shuttleing than the standard single motor.

Sorry to offend your delicate sensibilities.

1660 is indeed Unica; WWR(adio)U(nica). They play music in segments on the weekends and, I believe, in some overnight segments. They even have some countdown shows and artist features on the weekends. They don't play a lot of music, but there is some music programming.

> a million hispanics in Los Angeles, San Antonio, or Miami.

Oh, really? Except for a few differences in individual tunes on the discreet formats, and the single exception of the highly regional Tejano format, the Spanish language formats all over the Southwest are very, very similar.

In Dallas, about 90% of Hispanics are Mexican origin... similar to Houston or LA or Fresno or Phoenix, give or take 5%. The principle music formats are A/C, pop, regional Mexican (ranchera, norte�a, etc), oldies and Tejano as well as talk/sports. The music that researches within the formats is as similar in likenesses and differences as CHR would be between Denver and Sacramento... pretty much the same. The percentages of language usage are generally close in most cities except the more traditional markets of San Antonio, the Valley and Albuquerque (per Arbitron language enumeration study).

Usage of English language media is very closely correlated to the language enumeration question. Markets with high percentages of non-Spanish dominates have higher usage of English media... People with Spanish-dominate characteristics tend to go with media that plays the music and talks about the things they grew up on. It is really not that hard if you analyze population, national origin, length of residence and language usage by demo.

I tend to agree....in theory though, if the satellite feed is digital, usually MPEG 2, compression on top of compression can result in loss, the trick is, how much is too much????

my thoughts??? encode at high rates, say 192kbps or above, I use 192 because the file size is still quite managable, and the audio quality is acceptable, should result in a excellent quality file that can go to air. we do it up here all the time....it's getting ridiculous.

BTW, for americans, up here in Canada, there's a bit of a revolt from DGS. DGS really screwed up the transition from Canada's Digital Courier International to the DGS network after they bought it out about a year ago. The new software had stations not seeing spots, and not being able to send material to the point where I was getting dubs out of the states for material sent from literally down the street. kinda ridiculous. on top of that, DGS nailing stations $1500 per terminal per year right after the takeover (they were paying $0 to receive with DCI) has a lot of people up here pissed.

with the mp3 revolution starting in the pirate music scene, it has dramatically changed the way we receive and send creative, so far on a regional basis. material comes in via e-mail attachment, swapping between stations, and now, there's two services I know about providng a low cost mp3 delivery service, which offers delivery confirmation for spots. www.ad-dispatch.com and www.slingspot.com both are based up here....and ad dispatch started shipping material from "The Bay" a major national dept store chain who uses radio and up until recently, DGS quite heavily.

all of this in less then a year.......neat!!!

I might add, that national agencies are now considering DGS alternatives, specifically mp3, as I have received surveys from one of the big dubbing houses in Toronto. some agencies, production houses, have their own FTP sites you can log onto and download spots.

I'd be curious as to know if there's any similar activity in the US....or anywhere else on the planet. I know a lot of liner jocks and voices for hire are converting to mp3 very quickly, but anything for spot shipping???

I might add it's also a neat way to trade stuff you wouldn't hear anyway else. Before this whole thing started, hell, I was encoding spots for a page on my web site from my collection of nats from reels (yeah....a production manager that actually COLLECTS nationals...and the occasional regional....) anyone got anything interesting???? drop me a line at snarfdude@hotmail.com always good to listen to other stuff....ya get ideas......

BTW, I also use the free service www.whalemail.com to ship stuff on occasion...no confirrm, but the price is right if you don't want to clog up e-mail boxes.

Message-ID: <3944987f.13717135@SMTP.sprint.ca>
Source record: 19230

well......not that I want to get involved in a "quarrel" but personally, for radio production in the radio station enviroment, I just can't stand DAT altogether. no tight starts, and the SV-3800 I worked on often mistracked when you shuttled the tape....actually pretty much every time I use the shutlle jog function...to the point where I had to stop the tape then start it again....

comments??? was anything likely wrong with the machine??? any tricks to get a tight start from a 3800? minidisc, while admittingly a compression format, sure as hell is more flexable and "radio friendly" then a DAT machine in a radio production studio....hell, 15ips reel gets tighter starts, and the loss I can handle for our use.....time is far more precious....fortunately, i'm in the sticks at my current position, as a DAT machine is nowhere to be found.

>>

Except KBFB is a failure and the owners are dumping it -- again the problem
with Spanish-language radio is that all too often poorly programmed
stations with poor ratings are OK with the owners. Which is still why
the majority of Hispanics are opting for something else.

I can't think of any Hispanic friends or co-workers who listen to any
of the Spanish-language stations in town.

And still 100% second rate. I'm not anti-Spanish radio; I'm anti-
crummy radio. I'll re-stress my point -- in market after market,
Spanish-language radio tends to be cut-rate and fails to be
compelling enough to draw in most of the Hispanic community.

In Dallas, the black community has consistently embraced KKDA-FM
over its competitors (KDLZ, etc.). KKDA-FM is active in the community
and sounds like a major market station. It's too bad, HBC, Z-Spanish,
etc. are content to program mediocre stations in this state. If
they really cared about putting on a quality product and getting active
in the community, perhaps they would have a station that could draw
a 7.0 rating as well.

>Catholic faith.

My point was a popular station was changing formats. The change to Spanish-
language was announced months before and therefore a lot of people
knew about it.

If they didn't know in the Spanish community, it again shows out of touch HBC is by being unable to use its existing stations to promote the change and making sure billboards, press releases to Spanish media, etc. were done during the months before the change at 94.1.

The city of Dallas has changed in make-up, but the market hasn't changed that much. It is only 14% Hispanic today. There is just more of everyone today -- 1 million more in the last decade.

>> Also, I get tired of this stereotyping Hispanics as only wanting to listen

OK, how about San Antonio -- another large market with >50% Hispanic population. No shortage of English or Spanish-language stations. Only HBC's KXTN is in the top 10 -- at #6. While KXTN has done extremely well in the past, its KROM hasn't made the top 10 in the 7 or so years it has been around. KROM is the former top 40 KITY -- a 100 kw signal that competed with KTFM for #1 in the late 80s.

>Beyond that, the Valley is more like Albuquerque than Dallas: the Hispanics

Again, I find it hard to believe people in the Valley don't feel
comfortable with Spanish. Last year, a border town between Laredo
and McAllen decided to declare all city business will be done in Spanish.

>> >106.7 & 107.9 have a brand new format, soft A/C, and very limited

Yes, and it could never make much above a 1.0 in Dallas and was mostly
in the 2's in San Antonio on a full-market 100 kw signal (KROM's original
format and the format on KXTN, as KZVE, before the Tejano format).

Again, my point is that HBC recycles the same old formats. It isn't
working the 2nd time around in Dallas and failed twice in San Antonio --
time for something new. HBC is paying a fortune for two San Antonio
move-ins and will install Spanish-language formats on them this year.
I'll wager they'll put on that same Spanish soft AC format for the
third time.

>> It's hard to call that tired format "new." The Spanish soft AC format
>> and "Amor" handle were used on the 1480/106.7/107.9 frequencies before

I didn't say they were. I'm just pointing out most of the Hispanic
audience isn't listening to this crop of stations in town. You are
the one that keeps portraying Hispanics as just dying to listen to
these stations. My point is these stations continue to fail in
drawing them in and that if they provided interesting and compelling
formats, they would do better. Until then, Hispanics are going to
listen to other things.

I rarely use a dry cassette, and since I am my own engineer, I do
a full cleaning regularly. I'm also a lot less aggressive with the
machines than many, but they do get a daily workout. 3M/Scotch,
Quantegy, and BASF regularly with the occasional Fuji. Since there
are only two companies making DAT tape, brand is only relevant to
the cut. Discount brands often use edge cut tape, premium brands
center cut. Big difference in reliability.

But the public stations I work with also use their machines all
day, everyday, and they've also had few problems. My suspicion is
environment. DAT, like Video is very much susceptible to humidity.
And the stations with the fewest difficulties, as well as my own
studios, are climate controlled in the extreme. Constant temp
constant humidity. Life of switches has gone up dramatically as
well.

The instant start function depends on a number of things, how the
start code is recorded on the tape. This is often not a standardized
affair, and it can be maddening to try to cue up a tape, when the
machine want's to do something quite different. It also depends on
the amount of preroll that loads into RAM before the cue point.
Sometimes, if there isn't enough, the machine firmware takes over
and does it for you....of course missing your cue.

Peter <peterh5322@aol.com> had written:
|
| markrobt@yahoo.com (Mark Roberts) remarked ...
| >>
| Most of the patterns were from towers northwest or northeast of Houston,
| shooting most of their signal
| into the Gulf of Mexico. But, as I recall, KENR was
| somewhat closer in, with nulls everywhere.
| >>
|
| Northwest makes the most sense for Houston, with the exception of KTRH, which
| has to be northeast because of the co-channel Canadian Class I-A it must
| protect.

KTRH was at one time actually in Chambers County somewhere (I have the map stored away) and then moved to Dayton in Liberty County at some time not known to me (but before the 1970s). It was under manual operator control until 1985. I remember the first screw-up under automatic control: a capacitor had blown in the Optimod-AM at the STL. At the Dayton site, loss of audio triggered a tape of easy listening music. Apparently the backup procedure and equipment had not received upper management approval. This was not apparent until the failure of the aforesaid capacitor occurred at 6:30 am on a weekday morning: not a good time to be playing easy-listening tapes on a news/talk station!! The staff on duty did not call any member of management to report the problem, either! A couple of people lost their jobs over that one.

Scott Snailham wrote:

"I'd be curious as to know if there's any similar activity in the US....or anywhere else on the planet."

Even though you were talking specifically about production, I thought you'd be interested in hearing from another end of the industry.

For almost two years our company has been supplying radio stations across the south with their weather forecasts via the internet using MP3 compression. This fall we'll be expanding to other aspects of programing for stations in our home state of Louisiana.

Our website is http://www.radioweather.com/ and features our weathercasts for affiliates and commercials for them to use as part of our barter system.

What I would be interested in knowing is this: we presently compress at 22,050 mhz, 16 bit, mono. I was told this would be okay because most FM stations cannot broadcast a much better signal than that. Is this true? If not, what would be the better attribute settings? Compressing at too high of a rate would take forever for the station to download, but compressing at too low of a rate degrades the quality (I have noticed a phasing on the files compressed at the attributes listed above, along with a tinnier sound). There has to be a fine line between enough quality and the station being able to download the file quickly.

Any feedback would be appreciated.

This is an example of you so blinded by your love of these stations that
you read what you want to. KBFB is being dumped -- because of the
merger, two FMs had to go. CC opted for the weakest facility and
the one with the weakest ratings. KBFB is second rate and would have
been to a new format if it weren't for the merger.

This reminds of a dance lover that defends KRBV. Since it plays the
music they like, they elevate it in their mind. It's still has poor
ratings and still sounds second rate -- does any really think the
amateur-sounding morning show sounds like something that should be in
the nation's 6th largest market?

The original poster and all the follow-up posters of this article except
you are making the point that these large Spanish-language operators

come in and smugly claim they will put on compelling programming.
All this market has seen is less than compelling programming
and excuses -- our signal is weak, blah blah blah. KZMP-FM has the
same facilities as KMEO, so the fact it is not successful has more
to do that its satellite-delivered format isn't capturing the attention
of the Hispanic audience. Spanish-speaking audiences here deserve
better. Get off your victim attitude -- Spanish-language operators
deserve as much criticism as their English-language counterparts for
putting on low-rated low quality formats no one is listening to.

Please don't respond back with more nonsense about how well HBC
programs in LA and Miami. AMFM operates KYSR and KBIG in LA, but
that hasn't stopped them from putting on a pathetic sounding AC
station on KBFB that is getting ratings in the 1s here. The point is
HBC is doing the same thing here -- the "Amor" quad-cast and many of
their other properties are just as second rate as KBFB is.

Also, the "signal is weak" excuse satisfies you, but doesn't me. It's
the excuse of every operator who operates a weak station that has
a mediocre station on it. Rather than own up to putting on something
less than great, they pawn the blame on their weak signal and claim
they are victimized by it.

People will listen to a station they feel is worth it, even with some
static. Using another ethnic format -- Cajun KBON-101.1 in Mamou LA
scored a 4.0 in the most recent Lafayette LA Arbitrons. It's a station
that broadcasts well to the northwest of Lafayette and whose signal only
covers part of the market -- not unlike KZMP-FM or KHCK. It's
owned by a person that has no other broadcast properties. Even though it
doesn't have millions of dollars at its disposal, it still is drawing a
crowd. Although it is too sleepy for me, soft AC KMEO is drawing a crowd
and not going on about how their signal is compared to the other ACs --
KVIL, KBFB, KDMX - in the market.

Who are you to say it is not? Your opinion isn't worth any more than
mine is, buddy.

I know a good Spanish-language station when I hear it. I've lived
in Texas most of my life and all over the state including San Antonio
and border town Del Rio, where Hispanics are the dominant population
and culture. I just give the Hispanics in this state more credit than
you do of having higher standards than willing to accept just any old
run-of-the-mill crap. You just are happy to fit HBC's stereotyping
that Hispanics will flock to their stations just because the music is in
Spanish. It's just as foolish as those who assume every black listener
wants to listen to urban and rap music. It's just as foolish as every
religious broadcaster assuming every Christian will just listen to any
old religious format (KWRD-FM an excellent example of that).

The site grew out of my Texas radio/TV site. There is AM data for TX,
LA, OK, and AR, plus some surrounding areas. It hasn't been a high
priority to do since AM listenership is so low nationwide
and there hasn't been a lot of demand -- only 3 inquires for AM data
in the year or so the site has been up for nationwide listings.

Here's some Canadian stations using the "KISS" slogan:

* Toronto's 92.5 FM uses "KISS 92."
* Regina also has a "KISS 92."
* Vancouver has a light rocker called "KISS" as well.

I'm sure there's more!

>CHR before, CHR after.

I remember hearing KISF on my roadtrip to Emporia, Kansas in late 1994. COL is Lexington, MO. At the time they had Keith Eubanks doing the voice-overs. (At that time just about every CHR and modern-rock station in the country had him doing voice-overs :)

That was Thanksgiving, 1994. Fast-forward to Thanksgiving, 1999 - my uncle took a position at UMKC and now lives in Overland Park, KS, and my family was visiting the Kansas City area for the holidays. I don't recall what they were playing.

>Oddly enough, it didn't change the calls then. Last I heard, it was
>doing a variant of R&B oldies.

Possibly. We kept switching between the other oldies station (which my mom wanted to listen to) and Mix 93.3 (which I wanted to listen to) all weekend... I didn't listen to 107.3 much.

Calls are now KNRX.

http://www.radioguide.com/_vti_bin/shtml.dll/cities/kans.html

I see the thing owned by AMFM, which is merging with CCU. The results require that some stations be sold to keep within the ownership caps, and I think I remember that KBFB is one of the ones going to Radio One, along with KLUV. Radio One is one of the shrewedest, best managed companies in the industry and is making a nice acquisition to enter the DFX market.

The owners are not dumping it. They have to sell two facilities to keep within the ownershp limits. I'm positive that they would have kept two class C FM's in a top 10 market if they could have! This is an example of you reaching conclusions based on inaccurate facts. False premise = faulty conclusion.

>-- again the problem
> with Spanish-language radio is that all too often poorly programmed
> stations with poor ratings are OK with the owners.

Spanish language radio in the US began as a second rate service on AM daytimers or high-band directionals in many, many markets (fact accepted into evidence by FCC in by Adminstrative Law Judge, 1983, WOJO license renewal hearing, Chicago). These stations could not compete in the general market and often the programmer was the guy who spoke the best English and could, thus, talk with the manger or owner.

In the last decade or so, there has been very good Spanish language radio developing in the large and medium markets in the US. These stations are as well researched and designed as their general market brethren and are very focused. You have several large entities, like Entravision, SBS, HBC, Radio Unica and a number of smaller but competent local companies that use every one of the techniques recognized in general market.

The fact is, the programming is obviously as unappealing to you as AOR or A/C in English are to me. That is a question of taste, not of programming competence.

>Which is still why
> the majority of Hispanics are opting for something else.

This is just not borne out by the facts in the markets that have good signals and established stations. With 38% Hispanic population, Los Angeles averages 26 Spanish language shares. That's about 66% of listening in Spanish. Miami: nearly 70% of Hispanic quarter hours are to Spanish stations. And so on. You can go to www.rronline.com and look at the markets yourself (the site is now free) and see the % Hispanic and add the Spanish shares.
>
> I can't think of any Hispanic friends or co-workers who listen to any
> of the Spanish-language stations in town.

Do they speak English predominantly? A larger share of English dominant Hispanics listen to English radio, although many cume both types of station, particularly if they grew up listening to non-English music. Preference for English language stations is a function of assimilation... 60% of US Hispanics have been here less than 20 years and assimilation generally takes a generation or more, not a decade or so.

In fact, I just was part of LA's launch of an all oldies station. Since this is the music of the 60's that many persons who now live int he US grew up on, we find plenty of English dominant listeners... who can not speak grammatically correct Spanish... thanking us for bringing back the memories and the music they cherish and prefer. The station, less than 60 days old at the time, got a 2.2 share in April, and a 2.7 in 35-64. That is not done with bad programming. That is done because there is interest in good Spanish radio.

> CHR before, CHR after.

What's even *funnier* is that when KNRX (after its ill fated KCRX calls that
a classic rocker didn't seem to like) flipped to R&B Oldies in '99, they ran
Prince's 1999 for 24 straight hours (oddly enough, both it *and* KOZN,
ex-KYYS, were blown up from the same format within 48 hours of each other)

Art is running several stations in Tucson, AZ. He is playing the dance hits, with a short playlist, and doing quite well with a small signal in a big market. He is not doing obscure oldies anymore. I ran into him at an Arbitron Seminar at the Nikko in LA a year ago, and he was mentioning that the market has dried up for that flavor of oldies, so he is into mainstream radio now.

Excuse me, but who are YOU to say that a format you don't appreciate,
understand or know anything about is "second rate." I listened to KLTO for
several days last week, looked at their music selection and found that the
station is doing a very good job of providing the kind of music, talent and
promotions that fans of this music enjoy. In fact, the station has been
measuered against the audience, and the audience finds the staton to be
extremely good.

There is nothing cut rate about a station with first rate equipment
(probably as good as any Dallas station), competent engineering, targeted
music and the right promotions for the target audience. Obviously, you are
not going to be part of that audience. Respect the people who do like the
music and the presentation. The station is as good as most major market
stations in Mexico, where good radio has been a long tradition.

Once KLTO reaches its full potential... once the various pending upgrades
are done, you will see 8 to 10 Hispanic shares in Dallas, which will be
about 55 to 60% of all quarter hour listeneing and in line with the language
ennumerations studies done by Arbitron and also by Neilsen.
>
> In Dallas, the black community has consistently embraced KKDA-FM

> they really cared about putting on a quality product and getting active
> in the community, perhaps they would have a station that could draw
> a 7.0 rating as well.

Hmm. Lat weekend, KLTO raised nearly $600 thousand for St. Judes. Nearly
every week they have some kind of community activity or event. Sister KESS

is involved daily with the community, as it is a sports/talk station that is mostly local in origination (while the other talkers in English do mostly network Limbaugh and Dr. Laura).

I don't personally think the Z-Spanish stations (now Entravision) are anything special, and they do notoriously poorly nationwide. But the Rodriguez station is competnet, Unica is well done even if a little too niche, and the HBC stations use accepted top line industry techniques in every aspect of the business.

> knew about it.

The average Hispanic Spanish dominant listener did not know about the change until the simulcast of 106.7, 107.9 and the new staton began... because the closing had delayed several times, and no one wanted to yell fire one time too many. In effect, to the target listener, the change came by surprise.
>
> If they didn't know in the Spanish community, it again shows out of touch

> change and making sure billboards, press releases to Spanish media,
> etc. were done during the months before the change at 94.1.

You don't generally promote a new station until it is on the air. It just does not work unless you are dealing with a concept that is so different that it can presell itself, like the first station in a format in a market that has a big hole for the format. Otherwise, you confuse current listeners to your own stations.

Press releases are relatively useless,a s the other Hispanic media will not cover the change to any big extent (the English media covered the loss of the big signal Christioan station and its replacement by <yecch> Hispanic programming) as they are competitors.

Again, new stations are promoted when listeners can hear them, not before. Teaser campaigns are just about dead in all areas of advertising these days.

today --
> 1 million more in the last decade.

And, agian, research reflected 20 years ago that there was little sense of community as the Hispanic community did not have critical sustaining mass. It does today, and language usage will become more and more prevalent as time goes on. Dallas MSA is, by the way, 16% Hispanic.

Dallas MSA was 4.0 million in 1990 and is now 4.7 million. That is a 18% growth over the decade. The 1980-1989 growth rate was a bit over 11%. 1980 Hispanic population in the MSA was around 300,000, or approximately 7%. That was also below Arbitron's DST threshold at the time, so the market was doubly small. Hispanic population has more than triples, while the genral market growth rate has been about 50%. In other words, a major share of the

MSA growth has been the 800,000 new Hispanics who make up, well, 40% of the total market growth in thelast 20 years (I'm rounding, but the idea is sound: the big gwoth is among Hsipanics.)
>

> competed with KTFM for #1 in the late 80s.

San Antonio is 52% Hispanic, and Arbitron says that the Spanish dominant group is about 30% of that. So, theres should be about 14 Spanish shares. Add KXTN, KROM, KLEY, KCOR, KXDC, KSAH and KEDA and you get... bingo... about a 14 share.

As I said, and you are ignoring, the key is language usage. El Paso was Hispanic before it was American. Many of the Hispanics there have not spoken Spanish for 5 generations...

If you care to search, the language ennumeration data is somewhere on the Arbitron website. You will see that most makrkets, given that they have decent station facilities and suffiecinet program diversity, parallel in share the percentage of Hispanics who are Spanish dominant.

>
> >Beyond that, the Valley is more like Albuquerque than Dallas: the Hispanics

> any of the border cities as not having recent immigrants....

However, the bulk of the population in the Valley is long term, multigenerational. Check the Arbitron study and you'll again see that the share parallel language usage. The English stations in that area only get

about 35 shares, the rest is Spanish and a 20% of below the line /
unidentified listening (which is mostly to non-identifiable listening to
stations form Mexico)
>
> >
> >> The ratings for those 3 themselves is over a 30
> >> rating.

Actually, after checking, it hovers right about at a 30 share. It is less
than a 25 share in 25-54, though, as the CHR station is mostly 12-24.

>Hardly underserved -- dozens of Spanish-language stations on

A town, by the way, with about 300 inhabitants in the middle of nowhere.
Again, most of the listening in the valley is in Spanish. About 65% of the
listening, in fact.
>
> >> >106.7 & 107.9 have a brand new format, soft A/C, and very limited

KROM was not well executed. Played Vikki Car, of all things. Lots of
pre-research stiffs. Again, look at the two pioneers of A/C in Spanish, WAMR
and KLVE. Both are near the top of the market. KLVE cumes a million 200
htousand, and WAMR is generally top 3 25-54 in the Miami market. The San
Antonio station was not well done, and were it to have been, it would have
probably gone to a 4 share or thereabouts. KLVE in Jan of 1995 was the
"inventor"of modern, researched romántica music programming, and contains
elements that were not part of any A/C in Spanish before that time.

And it will win as the format has been developed, researched and redesigned.
Again, look at the LA and Miami staitons, both of which have relly good
programming and great, competitive signals. The format is a winner, now,
with the things that have been learned in the last few years.

2397. Does Comedy Belong on the Radio Anymore?

Newsgroup: rec.radio.broadcasting
Date: 2000-06-10 00:00:00 UTC
From: David Tanny <davidtan@cts.com>
Message-ID: <98r3ksgfn80ticdb80cqdmrsjosqr4ickh@4ax.com>
Source record: 19245

This page with hot links can be found here:

http://www.geocities.com/SunsetStrip/4656/radio/03art175.htm

One glaring omission to radio programmers today is the ability to program comedy on a regular basis like we once heard decades ago.

Comedy music is said to be a dying art. Gone are the days when comedy records graced the Billboard Top 10 and won Album Of The Year Grammys. In fact, judging from radio's limited ability to experiment with humor if they do so at all, outside of "Weird Al" Yankovic and Adam Sandler one might think that there is simply nothing else out there.

Comedy music has broad age appeal; it's not just a baby-boomer thing. People of all ages like to hear comedy, and I think there is some justification of that. There are new generations of fans of, say, "Weird Al" Yankovic, and one big fan is 14-year-old Weird Stefanie, who appearred with him on a Donny and Marie show in February and absolutely loves his music dating back to the days when the Knack was singing the praises of "My Sharona", which Al parodies into "My Bologna." So Stefanie likes music that was before her time. I also like music before my time. Neither of us cares when the music was made; what's important is that good comedy shouldn't only appeal to just one generation. In Al's case, his music appeals to that 14-year-old and THIS 40-year-old reporter.

I for one pretty much remembered the comedy records more so than I remembered the other hits mainly because of their unusual approach to music and sometimes stating a witty commentary of the state of some current affair in any given field or just designing it as pure entertainment. Comedy music is much more than Chipmunks singing or Dead Puppies or Weird Al's ten studio albums and anything like that. It's a genre so big in itself that it sould be programmed as a viable format as well.

Why comedy doesn't sound good enough for radio? I just don't know. Radio listeners should listen to comedy if they want to enrich themselves, but a lot of people either don't care for it or they haven't been exposed to it through any channel whatsoever.

San Diego radio, for example, is enriched financially with corporate bottom line goals and predictable playlists, but San Diego radio is poor culturally as far as comedy is concerned. Today's radio

programmers are either not educated in the variety that
comedy music brings to radio formats, or they are big fans of it and their
corporate suits won't allow them to "experiment" with
comedy their formats. Whatever the case, the losers are the radio listeners
who are being spoon-fed monotony of sameness
and predictabily from stations such as 91X, Channel 933, McMix 95.7, KGB, and,
I hate to say this, but even the independent
Sets 102.1 is as culturally dead comedy-wise as their corporate-controlled
competetors. Comedy could even liven up their
often too-mellow playlists on Sets every now and then! Everybody is a target
in my radio column, even stations I listen to the
most.

I mentioned Weird-Al earlier. 91X, for example, could play his Nine-Inch-Nails
styled comedy song "Germs" off the "Running
With Scissors" CD, Planet 103.7 could play "The Saga Begins", Channel 933
could play "It's All About The Pentiums", which
sounds like a rock-rap style, 91X and Star could play his "Pretty Fly for a
Rabbi", Star could play "Grapefruit Diet", KSON
could play "Truck Driving Song", and if Channel 933 has any intelligence, they
could play the pop-themed "Polka Power"

While corporate radio has been slamming the doors on novelty records in the
days of tighltly-programmed playlists, a revolution
of comedy music has been brewing on the Internet for the past four years.

Dozens on top of dozens of comedy musicians and troupes have been putting out
CD's of collections as well as many more
featuring original songs. You can find my Comedy Album Store at my website at
http://www.davesfunstuff.com.

While comedy has been a viable genre on the Internet, it has been absent from
commercial radio today.

Hundreds of acts have put together their own websites to sell their own comedy
records. Amazon and CD Now sell them
through the Internet. Radio still won't play them.

A dozen Internet-only comedy radio shows are streaming on the Internet today.
The syndicated Dr. Demento Show, which first
recognized comedy as a genre, is not only broadcasting on a few low-hundred
stations, but it's also streaming on the Internet
via their affillaites. College radio stations are also playing some of the
comedy music that's coming out today. Corporate
broadcast radio just isn't interested and it's just too bad for them.

One act that has been getting airplay on Dr. Demento, Crazy Jay, Chris Waffle,
Loopy, and other comedy shows in 1999 is the
Toluca Lake, California based Throwing Toasters, who just put out a CD last
month.

Since it's inception in 1995, Throwing Toasters has unleashed a steady stream
of "Alternative Rock Comedy Music" on an

unsuspecting public, who have embraced the band with their laughter. Straying from the usual standard (and some would say tired) comedy music convention of song parody, Throwing Toasters crafts new words and music about love and everyday life.

They have released two CD's, ALVIN (July 1999), which sold out it's initial run in under a year and burnt (May 2000), which received numerous pre-orders before it's debut and has sold strong since.

Burnt (Buy It Here!) just released in May features several previously-unreleased songs such as Debbie and A.T.M., in all, 16 16 newly recorded tracks. Their song "Debbie" was named #2 favorite new comedy song of 1999!

Throwing Toasters, who touts itself as World's Greatest Alternative Rock Comedy Band, recorded the "Burnt" album live at Hallenbeck's in North Hollywood, CA. The album was mixed and engineered by Grammy Award Winning engineer Steve Pouliot. The name of the CD was chosen from a multitude of suggestions made by Throwing Toaster's fans. The winning suggestion, "burnt" was made by toaster fan Jess Burley!

You can visit their websites: http://members.aol.com/throtoastr/ for their offcial website and http://www.mp3.com/throwingtoasters to listen to their MP3 samples online.

Throwing Toasters spent many years around the Los Angeles club circuit, performing their comedy alternative rock songs at various venues including Crazy Jay's Nights of Comedy as well as touring with four other comedy acts in the B.O.R.E.D. tour during 1999.

Drew Carey has raved that he, "loves [Throwing Toasters'] show," and Dr. Demento has said that the band is "One of comedy music future stars," proving that despite the "where's the band?" controversy, Throwing Toasters is a force on today's comedy music scene.

Band members: Grant Baciocco (Lead Vocals/Guitar), Dirk Underwood (Guitar/Vocals), Timmy DuFell (Bass/Vocals), and Stev "Musty" Jurgens (Drums/Vocals)

The B.O.R.E.D. Tour in which the Throwing Toasters toured, mostly just the lead vocalist Grant, put out a CD last year "The B.O.R.E.D. Tour Vol. 1 CD!" packed with 25 tracks of some of the best highlights of the first ever B.O.R.E.D. Tour show that took place on May 6, 1999! The artists performing in last year's tour were Leaser McFwap, Raymond and Scum who put out a commentary about the state of comedy music "(Nobody Loves) The Comedy Band" as well as the funny "Time With Your Wife", Hot Waffles led by Chris Waffle, who does his own comedy radio show on the Internet, the aforementioned Throwing Toasters, and this act that also put out a CD of his own, Larry "The Dream"

Weaver.

The B.O.R.E.D. Tour CD might still be available c/o Throwing Toasters P.O. Box 2764 Toluca Lake, CA 91610.

Larry Weaver just put out a comedy CD Everybody's Crazy But Me!!! (Buy this from amazon.com!) this past year. Larry's
CDs are already receiving nationwide airplay thanks to Dr. Demento. Similar shows across the country have followed suit.
Could Larry be the next Weird Al? Or maybe even the next Ray Stevens? You can have a hand in Larry's fate by requesting
your favorite song on the radio if you can. The syndicated John Boy and Billy Big Show (http://www.thebigshow.com) is heard
weekdays 6-10 AM ET (3-7AM PT) on great radio stations across America except cultually-bankrupt San Diego and Los
Angeles and plays comedy music. Do any of the morning shows play comedy music? Howard Stern, Dave, Shelly, Chainsaw,
etc. etc. Just talk talk talk. Boring!

Check out his website http://www.larryweaver.com/ to see what radio stations and shows are wise enough to take a chance on
playing comedy music such as Larry's. You can see a lot of cool features such as Pictures and videos from the Weird Al Fan
Convention, Shockwave fun: Create-a-character, Video Clips from his East Coast CD Release party, New shows added in
NC (Carrboro, Chapel Hill, Durham) and SC (Greenville), and more!

The highlight of May for Larry was performing at The Weird Al Yankovic Fan Convention (AlCon 2000) in Chicago. He got
to meet Dr. Demento and all of the great Weird Al fans from across the country.

Larry Weaver is no ordinary performer. During a show, he blends pop-culture laden comedy with off-the-wall songs to create
a unique entertainment experience.

Larry has been gaining a cult following across the globe since releasing his debut album, "Pack Full of Comedy" in 1998.
Thanks to exposure on syndicated radio programs such as Dr. Demento and savvy Internet marketing, Larry's mailing list
claims fans from 8 countries and nearly every state in the U.S. In 1999, Larry's hit "Grandpa's Gone Gangsta" spent much of
the year at the #2 spot on the comedy charts at mp3.comï¿½second only to MTV heavyweight Tom Green.

Weaver is no stranger to the stage. He formed sketch comedy group Selected Hilarity while a student at the University of
North Carolina. After graduation, the group headlined over 500 shows in 33 states. They were so popular that the National
Association of Campus Activities nominated them in 1996 and 1997 for Comedy Act of the Year. Now on his own, Larry's
shows include songs that range from rock 'n roll to rap and from bluegrass to

blues.

A former professional wrestling manager, Larry's eclectic interests include web design, rap music and late-night infomercials.
His goal is to one day fight Stone Cold Steve Austin on Pay-Per-View. Whether it's on the radio, on stage or in the ring, a
Larry Weaver performance will delight anyone who loves to have fun.

Larry worked with Chris Rock, Ray Romano, Damon Wayans, Faith Hill and many others.

Thanks to the Internet, comedy musicians are getting the mass exposure they deserve at long last.

For links to the comedy artists, comedy shows, playlists of several comedy shows, and more, visit my home page at
http://www.davesfunstuff.com

If you want comedy radio 24 hours a day, then give the new Comedy World Radio Network a spin at
http://www.comedyworld.com

Comedy music is alive and well on the Internet. The revolution is not being televised over corporate-controlled radio, but
eventually, comedy will get much more respect as their fans demand a comedy radio format in their cities as the years go on.

David Tanny Mentioned in a Book

I was recently mentioned in a new paperback book "TV Moms", available at Amazon
(Buy TV Moms: An Illustrated Guide) as well as Barnes and Noble this past month.

I was mentioned in the acknowledgments page on page 191 as the author was frantically trying to come up with a line about
one of the TV mothers, Abby Bradford, played by Betty Buckley. I plucked out an episode from my Batcave at random, the
"All The Vice Presidents Men" Thanksgiving episode, and came up with this line for the author from Abby: "We're Not Your
Typical American Family!"

BTW: You can find my other website at http://www.eightisenough.com, which I registered a year ago today, the 8th of June no
less, and reruns of Eight is Enough at 5-7pm on Pax on Channel 30 in Los Angeles and on cable in San Diego.

Disclaimer, Etc.

David Tanny lives entirely in Cyberspace where corporate radio doesn't control everything that is broadcast over the Internet,

allowing his bad singing to be streamed off his website on demand! Tanny's
"Today in All Kinds of History" is used by some
stations owned by Jefferson-Pilot Communications among others. Please judge
any possible conflicts of interest accordingly.
Please direct your news scoops to Dave at scoops@davesfunstuff.com and letters
to the editor about various subjects at
letters@davesfunstuff.com.

This post is sponsored by Pokï¿½mon. Gotta collect 'em all!
Listen to DFSX Comedy Radio: Paste http://166.90.143.141:8572/ into WINAMP Open dialog!
Al-Team #80 (alt.music.weird-al) http://www.davesfunstuff.com/ for South Park, Radio/TV,
Dr. Demento, Today in History, Funny Stuff, "Weird Al" Yankovic, Icons, Eight is Enough,

David Tanny wrote (I'm not gonna quote it due to length) about radio comedy...

David, in my opinion, comedy is still very much alive and well, thanks to production companies such as the TM Century comedy network, etc. Most of these production companies produce comedy material specifically for radio.

The problem with bands/groups/artists who put out comedy albums, is that their material is LONG. Of course this is just my opinion, and I'm not aware that there's any research to back it up.

My personal feeling is that the shorter the comedy bit, the better. The longer the piece gets, the more redundant and less funny it becomes.

Most of the production companies keep comedy bits under 2:00 minutes, whereas Weird Al and others tend to go 3:30+.

Just remember the old saying... "Less is more". I personally think this is applicable to radio comedy today.

There was a guy who went by the on air name of J.R.

He was on WWL, New Orleans for a while and then went to Little Rock to KARN.

Anyone know where he might be now?

He was great on the air and should be nationally syndicated.

markrobt@yahoo.com (Mark Roberts) remarked ...

>>
Most of the patterns were from towers northwest or northeast of Houston,
shooting most of their signal
into the Gulf of Mexico. But, as I recall, KENR was
somewhat closer in, with nulls everywhere.
>>

Northwest makes the most sense for Houston, with the exception of KTRH, which has to be northeast because of the co-channel Canadian Class I-A it must protect.

KENR's night array is a strict multiplication method array.

As such, it can be considered to be the product of a fairly narrow beam side-fire (figure-8) produced by the west-east towers and a fairly broad beam end-fire (cardioid) produced by the north-south towers.

Almost perfect cancellation of the back side of the side-fire is achieved, therefore almost all radiation is in a narrow beam directed towards the south-southwest, and downtown Houston.

There are theoretical nulls "all over the place" ... two produced by the side-fire and four produced by the end-fire, for a total of six ... but these local minima are not much deeper than is the surrounding field.

One can never really achieve an infinite front-to-back ratio, but this array comes pretty close.

Source record: 19159

Gray Frierson Haertig gfh@haertig.com asks ...

>>
I think it interesting that maximizing groundwave radiation versus skywave radiation is dubbed "anti-fading". Do you think they were refering to fading caused by self interference when a stations own skywave interferes with its groundwave?
>>

Precisely so.

A radiator that is taller than 180 degrees will have a horizontal field that exceeds Class A minimums, but such a radiator also has a vertical component which can begin to interfere with fringe reception.

We can continue to increase the radiator's height until we reach 200 degrees at which point we will have about 113 percent of Class A minimum, or about 410 mV/m/kW at 1 km.

But much more height than that and the vertical component becomes so strong the fringe reception is compromised.

Perhaps this is why the tallest conventional Class A non-directional radiator in the U.S. is 207.80 degrees tall.

The whole point is to allow for an increase in height, thereby resulting in an increase in efficiency, while eliminating the vertical component.

The sectional radiator provides this capability.

By canceling the vertical compoment we can increase the overall radiator height, and thereby increase its efficiency.

The best example is WHO, which has a 120 degree bottom section and a 300 degree total electrical height.

This radiator puts out 471.54 mV/m/kW at 1 km, and with 50 kW input the horizontal field is equivalent to 85 kW into a "conforming" Class A radiator (about 175 degrees tall). IOW, the WHO radiator is 130 percent as efficient as is a "conforming" radiator.

And not only are you getting 85 kW horizontal field, you are getting that with very little fading.

>>
Do you have any details on how these various sectionilized radiators are being fed?
>>

It is my understanding that most sectional radiators have tuning boxes located at the insulator separating the bottom and top sections.

And I am aware of some radiators which were once sectional, but were converted to conventional by removing the tuning box (sectional radiators have a bad reputation for being expensive to maintain, probably due to the difficulty to maintain adjustments in the remotely located tuning box). One in particular still has the tuning box installed, but it is rendered inactive by strapping across it.

But the KNBR radiator is quite different.

In this case, there is an adjustable transmission line which connects the bottom and top sections. And this transmission line is reported to be mounted on the inside of the constant cross-section tower.

I am not sure precisely how this tuning is effected, and one report stated the design information was lost (although it was certainly in NBC's hands while it owned the station).

And the readjustment from favoring skywave to favoring groundwave was done while that station was still owned by NBC.

>by Belo Corp. The same folks that own Channel 8.

It's always amazed me that people in non-commercial radio were
expected to live in some other world than commercial folks. Food and
shelter costs the same.

It's especially interesting in a city like Dallas where the Mayor's
job is an unpaid position (at least when I lived there). Only
multimillionaires could afford to take the job. Unpaid
multimillionaires often have some other agenda more focused on their
personal businesses than the well being of the residents of the city.

Some day I want to see radio & TV stations have newspaper critics. If
broadcasters ran as much advertising as newspapers do we'd be out of
business. Maybe that's why there are far fewer newspapers today than
30 years ago and thousands of new broadcasters.

Hi, it's Lefteris from Greece. I don't know if you are interested but i can inform you about greek-speaking radio stations, named "KISS FM"

All KISS FM's in greece are under the same management (or use this name after a deal) as this name is a trademark.

So,
GREECE:
Athens KISS FM 90,9
[received in all Central Greece, Peloponesus and Aegean]
Thessaloniki KISS FM 90,8
[received in all Central Macedonia]
Larisa KISS FM 89,4
Volos KISS FM 90,7
Heraclion KISS FM 96,1

CYPRUS
Nicosia Kiss FM

I may have forgot someone

2407. 6 PM TV News on the Radio in DFW

Newsgroup: rec.radio.broadcasting
Date: 2000-06-12 00:00:00 UTC
From: wallyw26@airmail.net
Message-ID: <mS/131VwI-0008EQS@mail.airmail.net>
Source record: 19163

I've never hid the fact that I work for Channel 8 so let me clear the air a bit on the newscast on the radio situation.

WRR was an original member of adhoc network of stations carrying Channel 8's 6PM news.
They carried the "6" for nearly a decade. They were free to sell any and all advertising within the newscast and did so. WRR did not have to return the favor to Channel 8 and carry any of our promotional spots. The several ADI stations that also carry News 8 at 6 are asked to carry
3 :60 Channel 8 spots daily and they can run them whenever they want.

When KXAS pre-empted Channel 8 on WRR (which I thought was extremely smart on their part),
News 8 moved to KRLD....until CBS formally aquired KTVT Channel 11. At the first of this year they began to carry Channel 11's newscast at 6 PM.

So, News 8 moved to KLIF (mini 570 ;-0). Again it's a straight swap....we promo the fact that you can hear News 8 at 6 on KLIF, and they mention it too. We also provide weekday morning weather to the Susquehana nation of stations in the market.

So the scorecard should read as follows

WRR-KXAS-TV
KRLD-KTVT-TV
KLIF-WFAA-TV

And....for a brief while in the early 90's you could hear KDFW-TV's newscast on the old KGBS-1190.

On to WRR. I for one don't think the city of Dallas should be in the broadcasting biz. But I also see the point that if the station is sold there can be no guarantee that the Classical Music programming will remain on 101.1. The idea of the station going to some sort of "Arts Trust" is a good one,
but getting all the different arts organizations each with their own agendas to cooperate on something like this would take negotiation skills on the level of Winston Churchill's. IMHO WRR is sort of a whipping post for the Morning News on occassion which is unfortunate. There are more pressing concerns in the city such as police/fire pay, streets etc. that need journalistic prodding.

Most morning shows, and some pm drive shows in medium markets and higher,
produce their own stuff these days. Gives more of a local flavor.

The glut of 'comedy clubs' in the 80's with every man and woman with a pulse
dropping off tapes at stations , I think took its toll.

Geez, now I feel guilty - I was one of the last ones to be hire to make up for the "purge of '86". Stayed 3 years....

There's new management now (GM Laura Morris and ND Joe Izbrand are out!) Hopefully things are easier for the staff now.

I get the daily "news" paper whenever my cat's pan needs to be changed.

My neighbor used to work for the local paper and had a properly registered parking
decal on her car that read: "SH-T"
This was short for the "Sarasota Herald-Tribune" ... officially.

Pretty much said it all ... actually.

Jeff in Sa-ra-so-ta

P.S.
I noticed you added a "b" to your e-mail.

F.Y.I. WRBW AM/FM are available as is KRBW-AM. But KRBW FM is a non-com in Kansas.

CRBW or ï¿½XERBW, anyone?

Thank you for your very informative posts. Over the years I've worked on a number of arrays but never anything other than straight, solid, 1 piece, vertical towers except for 1 shunt fed ND.
I have 2 questions.
1. How was/is the signal coupled to the top section? Was it series inductance between two insulated sections or something that could be controlled from the ground?
2. What is meant by a "Franklin" tower?
You can get technical. I've got a 1st/General.

Hi Folks,

A friend of mine has asked me to teach him how to work a cart machine. Problem is - I don't know where to start. I want to give him a nice firm background that I can build off of - just so we're both on the same page from the beginning.

Does anyone know of a good written primer on how to use a cart machine that I can give him? (Everything from "tape goes in here" to laying down cue tones and all that good stuff).

Thanks in advance!

1. How was/is the signal coupled to the top section? Was it series inductance between two insulated sections or something that could be controlled from the ground?
>>

Based upon a few data points, and therefore not intended to be a generalization:

A tunable network was placed across the insulator separating the sections.

The network could not be adjusted from the ground.

The bottom section was series fed, as usual.

>>
2. What is meant by a "Franklin" tower?
>>

A vertical radiator which is center fed.

I have worked on two arrays here in Portland that were formerly sectionalized but are no longer. Both are two tower arrays and each has only one of the original towers.

The 970 array lost its east tower in the Columbus Day Storm of 1962 when Portland experienced wind gusts in excess of 100 MPH. (A colleague was helping a friend secure some equipment on the roof of the studio of the 1290 during this storm, only to have the ladder blow down. He and his friend rode out the storm on the roof, surrounded by several feet of water and watched 2 of the 3 self supporting towers of the 1330 array on Mt. Scott blow down.)

The 620 array had one of its towers knocked down by a house! It was located in Vanport, a Kaiser Shipyard company town, then the second largest city in Oregon. A flood in 1946 resulting from a ruptured dike during a period of very high water on the Columbia River, destroyed the town in a matter of hours. The tower was knocked down by a house that floated by. All that remains of the city are few foundations.

Quite a good station. The So. Cal. Gas Company sponsored a commercial-free
2 hours every evening. Plus, not far away on the dial, was U. So. Cal's
student station. With a department of broadcasting, they did a good job
and for a while had an all-classical format. Them were the days.

Remember KFAC's Before and After ads? Full-page in newspapers, showed a
total slob in the Before I started listening to KFAC, and something like
an Italian playboy in the After pix. Nice touch.

2425. Re: A cart primer

Newsgroup: rec.radio.broadcasting
Date: 2000-06-13 00:00:00 UTC
From: Eric Justin Aiese <aiese@fas.harvard.edu>
Message-ID: <8i4btaieo1@news.fas.harvard.edu>
Source record: 19180

Saloway <saloway@bu.edu> asked:
>>...any references for cart usage?

Don't know of anything printed offhand, and I can't find what I wrote for a station where I consult. All the same, here are the main ideas:

THE BASICS:
-A cart is a tape loop with special tones that stop the machine when the cart is recued.

-There are three sizes of carts; only the smallest is commonly used today. A cartridge of this size can hold up to 10.5 minutes of tape

-The universal speed for carts is 7.5ips. I've heard that some stations modify them to 15ips, but I've never actually seen this.

-The cart head has two or three tracks: either one or two audio tracks (two for stereo), and a control track. The latter records/reads cue tones.

-The mono and stereo formats are somewhat incompatible. While they both use the same carts, the audio track on a mono deck/cart is located where the LEFT track is on a stereo deck. Hence, if a mono cart is played on a stereo deck, one track is dead; similarly, a mono deck will only play audio from one channel on a stereo-recorded cart. Of course, once erased, a cart can be rerecorded on any deck.

TO PLAY:
1 - Insert the cart.
2 - To start, press play/start. If the console has remote starts, you might fire it from there.
3 - When the song/commercial/etc. ends, don't hit STOP. In fact, you should *NEVER HIT STOP*, under normal playback operation, unless the deck is on fire, or the deck isn't reading the stop-cue. When the cart is recued, it will stop on its own. Until then, the capstan will keep it locked in place, so you won't be able to remove it.

TO RECORD:
1 - First, erase the cart. You'll need a bulk eraser or special cart-eraser for this, since most cart decks don't have erase heads.
2 - All carts have splices, which normally produce a blip-sound during playback. The idea is to start recording right after the splice. (I worked at a station once where we didn't worry about splices, and it didn't cause any major consequences in our sound, but that's for you to decide.) To find the splice, hit play and watch for the splicing tape to fly by. When you see it, hit STOP and you're set. If you have a cart splice-finding deck, you can use that. If the previous

cart-user worked around the splice, it should already be cued past that.
3 - Put it in RECORD-ready mode, so the VU meter should start metering your input.
4 - Hit START and immediately start your element. Time this so there's barely a split second before the sound starts. Tightness will depend on your usage.
5 - Near the end, you might use a tertiary (warning) tone, and at the very end, you can put a secondary tone to silence the deck.
6 - If you want to put an additional element on the same cart, hit STOP, and go back to Step 3. This way, you can rotate what comes up each time you use a cart (say, 3 variations of a commercial with equal rotation).

TONES (I don't remember the actual freqs offhand, maybe 100Hz for the first):
-The primary tone is recorded when recording starts. This tone will stop the deck once the cart reaches the beginning, recueing the cart. Some decks allow you to defeat this, if you don't want to put a stop cue there. This allows you to do some crude editing, if you're in a pinch...

-The secondary tone is used at the end of the audio. This can be used to trigger the next cart in automated and semi-automated systems. On many decks, it can also be used to mute the cart. That way, it shuts any tape noise/hiss off until the cart recues.

-The tertiary tone isn't found on all decks. This can be used as a warning tone. You could hook a lamp up to flash, say, 15 seconds before the end of the song. A nice feature, but by no means necessary.

CLEANING:
You need to keep the heads very clean, or else the heads might not pick up on the stop cues; when the carts don't stop, you have a headache. Alcohol and Q-tips do it. I heard that stations used to clean them twice a day. With older carts, the oxides are looser, so you want to clean them whenever you get a chance.

Good luck,
Eric

It's possible under Part 15 to broadcast on the FM band over a very short distance, so with one or a few transmitters it's possible to cover a lot of outdoor events, though I suspect a lot of these operations are pirates. The only way to do it legally outside the Part 15 limits is to get either a special temporary authorization or a short-term experimental license, and in both cases you need a darn good reason.

Speaking of STAs at public events, there was a massive stink a few months ago when the FCC ordered a Texas speedway to shut down an unlicensed low-power TV station it was operating during a weekend racing event; the speedway's owner complained to his Congressman, who called up FCC Chairman Kennard, and before you could say "special temporary authorization" the FCC staff issued one to allow the speedway to put its TV signal back on the air, causing a number of people to wonder about the propriety of that FCC action.

2427. "Clunky" Otari Hubs... How to solve?

Newsgroup: rec.radio.broadcasting
Date: 2000-06-13 00:00:00 UTC
From: robbass2@aol.com
Message-ID: <20000613020910.00132.00002721@ng-fu1.aol.com>
Source record: 19182

This is probably an off topic question, but I just have to ask...

I've got an Otari MX5050 BII that uses the standard Otari reel hubs for 10.5" reels. While they work fine with plastic reels, they clunk like crazy if I use metal reels. I've tried using the rubber slip disc between the hub and the table, as recommended for metal reels, but that doesn't stop the noise.

Before I trash all my metal reels and replace them with plastic, has anyone else found a solution to this problem? I tried some other hubs that I believe were called VIF hubs. They did indeed solve the problem, but are a pain in the a** to remove from the machine when you want to use smaller reels.

I'm open for any suggestions (and no, chunking the machine and getting a DAW is not an option at the moment) <g>

Thanks!

>>

Although 620 is moving or has already moved in with co-owned 1190, when I last visited the old 620 site, the south tower still had the tuning box, although the license data said that radiator was not sectionalized.

My guess is sectional operation was abandoned due to high maintenance costs.

It certainly is a big problem. As well as the RSLs the pirates tend to use channels allocated to stations just outside London, such as BBC 3CR from Zouches Farm (103.8) or BBC R Kent from Wrotham (96.7), as well as others.

If you have not already done so, look at

www.radio.gov.uk/document/misc/vhfreplan/index.htm

which discusses possible conditions for introducing more FM stations in the UK by reducing the allowable dBs of protection between co and adjacent channel services. The paper contains case studies of two metro areas, Greater London and West Yorkshire.

Regards,

Ted Richardson.

This is popular at drive in movie theatres. They put the
soundtrack, on a low power FM stereo signal, so patrons in their
cars can listen in stereo, and avoid the narroband mono sound of the
traditional zinc die cast drive in speaker. Which, in my opinion, is
one of teh charms of the drive in anyway...but that's just me.

The range of most of these transmitters is barely to the edge of
the property, but audio performance is often up to broadcast spec.

There was a company who sold these through broadcast supply
houses, and electronics wholesalers in kit and pre assembled form,
for a couple of hundred bucks in versions that went up to 5 watts,
but used very small antennae. But they weren't sold to the public,
and a license was definitely required.

One of my business partners got hold of one, and during an open
house at his studio, used it as a background music source in each
room, rather than wire the place from a central source...(HUH? this
WAS a recording studio, after all) Anyway, the party was a huge
success, and everyone commented on the quality of the sound.
Including his attorney, who spent the last half of the evening
conversing with the man with the badge who wanted to know who the
brain surgeon was that set up a station on top of one of the
commercial stations in the market. And used a section of guy wire
for the rooftop TV antenna as a radiator.

Apparently this adhoc Muzak broadcast had about a 15 mile range.

We sent Rob cards at Christmas. He was out in 2.

Primary = 1 kHz
Sec = 150 Hz (although some machines I worked on were 120!)
Ter = 8 kHz.

I still have the alignment tapes, guides and roller for the machines in my shop, along with an IGM 350 Stereo carousel and a metal work stand for referbing them! As a side note, at a 1988 radio convention we had (3) IGM carousels, with (4) RCA RT-27A cart decks, and Revox A-77 machines connected to an IGM EC controller just purring away for an entire weekend. The biggest problem with cart machines is that like VTRs, unless you perform regular maintenance on them, they go downhill *fast*.

I use
>metal reels. I've tried using the rubber slip disc between the hub and the
>table, as recommended for metal reels, but that doesn't stop the noise.

Is the squeak from the reel touching the machine, or the tape brushing the edge of the reel when moving? If the reel is physically touching the deck plate, you may have to adjust the table height, which is under the deck plate. (bitch to get at). If it's tape rubbing on the reel, check the guides and make sure the slack arm is not bent. However, after nearly 2 years of dubbing my jingle and music library over to CDs, I'm finding that a lot of tapes that were not stored tails out "properly" have caused a warp in the reel. In one case, some Ampex 641 which was loose wound pushed out the edge of the reel by as much as .18" which is a lot. In that case, you just have to put up with the noise, or take the time to rewind all the tapes tails out. Tape.... gotta love it... just don't get me going about sticksion! <grin>

Since you're working for a university with one of the largest
broadcasting departments in the education industry, I'd walk down the
hall and find an older professor who remembers cart machines and ask
him or her how they work.

It'll take about 5 minutes for the full course.

1. Erase the cart
2. Find the splice
3. Stick it in
4. Push record (I'll assume input levels are fixed)
5. Start recording
6. Apply the cue(s) where you want them.
7. Wait for it to recue and stop
8. Listen to it (many people forget this part)
9. Ask yourself if what you've recorded is of any interest to anyone
else before you broadcast it

Learning how to create something worth putting on a cart takes much
longer.

I think if someone sent me a spot like that, I'd reject it and/or redo it.
Stay away from 32kHz sampling, you can pick up the difference on air, 22k
won't cut it either. Where I am, the standard among stations is 44.1k,
and a few of us use 48k and convert to send material out. In terms of
MP3, I've heard some great sounding files at 128kbs, But I prefer 160kbs or
192kbs for better fidelity while maintaining a reasonable file size.
anything less than 128kbs gets rejected here.

To get tight starts on a DAT machine, you need one that has a RAM buffer.
In Panasonic terms that's the SV-4100. Much more expensive. The ones we
had worked well for a couple of years, and since then we've had a
difficult time getting them fixed correctly. Get one back from repair,
it'll be fine for a couple of days then it's busted again.

I think Wally has this one nailed pretty suscinctly. Probably the best we can hope for is for nothing to happen. Several years ago, a group tried to purchase WRR from the city. They were unsuccessful. For the well being of the arts community, that's been a good thing. It surely would have changed format if it were sold. On the other hand, from a "good business" point of view, the city probably should sell it, but I'm very happy they have not. Fortunately, the City Council does not seem to have studied accounting.

WRR protects itself with an organization known as "The Friends of WRR," who are some pretty heavy hitters in the Dallas community. I suspect without their intervention, WRR would be a new Rap, Hip-Hop, or maybe even Spanish language station.

And I think that's honorable, actually!

Your site is just such an invaluable resource for FM and TV
information...and the TX-area AM information you do have... that I
just would love to see a similar thing for AM stations. Maybe this is
one that needs to be done on a state by state basis... like I could
somehow do it or get someone to do it for California.

But I do understand your position.

A similar situation occurred here in New York a few years back, when NYC divested
itself of WNYC AM, FM and TV (channel 31). The TV station went commercial, but
a non-profit bought the AM and FM stations (at somewhat below market prices) and
has maintained a semblance of what was good about those stations in the past.

One could only hope that the listeners of WRR could do as well as we have here.

All points well taken, Rich, but WRR-FM is a commercial station--there's even an advertiser links page on their site.

Of course, whether the City of Dallas is supposed to make money with the station seems to be a point of concern to some people. For the last 30 years, WFMT in Chicago--once again the city's top-rated classical station in the only remaining U.S. commercial classical music rivalry against WNIB--has been owned by what is now known as Window to the World Communications, the non-profit owner of primary PBS affil WTTW. Some people, including classical music critics for major Chicago newspapers, say that WTTWC should run WFMT as a "public trust" and not aim to turn a profit. The fact that the station does fund-raising and has a listeners organization called the "Fine Arts Circle" to make up the revenue they aren't getting because of their long-time ban on recorded spots (and supposedly to fund non-music programming like drama or poetry readings) says that on one hand the station agrees. On the other hand, since the station now programs mostly chamber music and short, light pieces during the day now like every other commercial classical station (and some non-coms, as well), it seems like they do want to earn some revenue. It's a very slippery slope for classical stations these days.

For spots with music I'd agree, but Doug's talking about weather forecasts, meaning voice. 32 kHz is fine for that.

"In terms of MP3, I've heard some great sounding files at 128kbs, But I prefer 160kbs or 192kbs for better fidelity while maintaining a reasonable file size."

160's what I'd go with too, for 44.1 kHz stereo. That's why I suggested 56-64 kbps, to provide approximately the same number of bits per sample at 32 kHz in mono.

Really is, but slightly less intuitive. My first cart experience, about
5 years ago, happened after my high school station adopted a bunch of old
decks/carts. I spent hours wondering why my recording wasn't working.
Wasn't until the next day that I found out that carts needed to be bulked.
Small detail, eh? :) I suppose some of the others are equally easy in
hindsight, but might not be considered to a newcomer...

Fred,

Thanks for your response, but it's neither one. If you've never worked with an Otari MX 5050B series machine (there's nothing in your post which states you have) then you may not be aware of what exactly the problem is I am describing.

This is a classic problem with Otari MX 5050B series machines, and every one I've worked with, does it. The NAB hubs Otari used on the B series machines was changed when they released thre B III's, and I wonder if this problem is the very reason why,

The problem with the older NAB holders in terms of metal reels, occurs for two reasons. First, metal reels are much heavier, and secondly flanges on them are thinner.

This doesn't give the Otari NAB hubs much to grasp when you lock them in place, which results in a "clunking" sound as the hubs turn.

Like I said, every MX 5050B that uses this style of NAB hubs, has this problem. The only exception would be machines that are installed in roll around racks where the rack is tilted back.

The 620 is still where it has always been. They applied for yet another version of moving to the KEX site - 50 KW Day ND, 30 KW nite using the outer two towers of the array - and AFAIK they haven't received a CP yet for this.

I am hoping to get in on the fun of the tune up. Additionally, the nearby 1520 is looking into detuning the KEX towers at 1520. The 1520 pattern has always been a bitch to get in. The pattern has two nulls, one on each side of a small tit to the rear of the pattern. I have spent hours working on that array, and, except when it is grossly out of tune, the two nulls move in contrary motion as the array is adjusted. That is, as one null goes down, the other goes up. The KEX towers are very tall at 1520 and the modeling indicates that with the worst case terminal impedance at 1520 (about -j100) it can introduce as much as 2.5 db variation in the 1520 pattern.

The other problem with sectionalized operation is that, prior to the advent accurate toroid sampling transformers, once a day the duty operator had to climb the towers and read the base currents of the upper sections. In this day and age when OSHA isn't a little town in Wisconsin anymore, can you imagine requiring an employee to do this.

Gray

2449. Re: Sectional Radiators - Was: Old diamond shaped towing coming down

Newsgroup: rec.radio.broadcasting
Date: 2000-06-14 00:00:00 UTC
From: Gray Frierson Haertig <gfh@haertig.com>
Message-ID: <394714C6.DA273E50@haertig.com>
Source record: 19105

The 620 is still where it has always been. They applied for yet another version of moving to the KEX site - 50 KW Day ND, 30 KW nite using the outer two towers of the array - and AFAIK they haven't received a CP yet for this.

I am hoping to get in on the fun of the tune up. Additionally, the nearby 1520 is looking into detuning the KEX towers at 1520. The 1520 pattern has always been a bitch to get in. The pattern has two nulls, one on each side of a small tit to the rear of the pattern. I have spent hours working on that array, and, except when it is grossly out of tune, the two nulls move in contrary motion as the array is adjusted. That is, as one null goes down, the other goes up. The KEX towers are very tall at 1520 and the modeling indicates that with the worst case terminal impedance at 1520 (about -j100) it can introduce as much as 2.5 db variation in the 1520 pattern.

The other problem with sectionalized operation is that, prior to the advent accurate toroid sampling transformers, once a day the duty operator had to climb the towers and read the base currents of the upper sections. In this day and age when OSHA isn't a little town in Wisconsin anymore, can you imagine requiring an employee to do this.

Gray

From: Doug Joubert <djoubert@mindspring.com>
Message-ID: <001201bfd5f8$563ff120$9a818ad1@i1p4e0>
Source record: 19106

That's why this forum is so great! The guys who know the stuff, let the rest of us guys know more stuff. You even put it in a form of English I can understand!

Thanks, guys.

BTW, I've been using an MP3 Compressor that just uses 32 Kb/s compression. It is NOT changable. Is there another MP3 compression program somewhere that will do the job quickly and painlessly (doesn't cost an arm and a leg) and is capable of changing the rate of compression to something other than 32 Kb/s? (I hope I'm using the correct terms here)

Thanks, again.

2451. Re: "Clunky" Otari Hubs... How to solve?

Newsgroup: rec.radio.broadcasting
Date: 2000-06-14 00:00:00 UTC
From: "R. Lee Wheeler" <whebdcst@sky.net>
Message-ID: <39477E8B.22F22EB0@sky.net>
Source record: 19107

Robert,

Assuming that the adapters are firmly seated on the hubs it sounds to me like your metal reels are "out of true" or warped. The spacers won't do much for warped reels. The Otari hub adapters are a bad implementation of a bad design but I don't think there is much out there in the after market anymore. I've had lots of trouble with the Otari adapters jamming to a point where you almost need to smack them with a hammer to get them off. Turn the adapters over and check the condition of the tiny guide screw at the base. That screw can wear out and cause the whole mechanism to jam up.

> (there's nothing in your post which states you
> have) then you may not be aware of what exactly
> the problem is I am describing.

I've got them at the TV station. I know what you are saying, and the problem I've seen on them is still an issue of proper height adjustment. The rubber pad sometimes makes the reel height too high, while the lack of it causes it to be too low. I notice this when you switch between a metal reel and the Polyline plastic reels. On some of the old reels I have, there is as little as .05" between the edge of the plastic reel and the tape path, and that distance will change as the tape receives or depletes tape.

> This doesn't give the Otari NAB hubs much to grasp when
> you lock them in place, which results in a "clunking"
> sound as the hubs turn.
> Like I said, every MX 5050B that uses this style of
> NAB hubs, has this problem. The only exception
> would be machines that are installed in roll around racks
> where the rack is tilted back.

I found an old set of hold-downs from an Ampex 350, and use that on one machine in production. I've never figured out why the Otari hold downs just don't grip the spindle. You have to crank them on with the force of Herculese to get them to stay. Most of the production guys just tilt the machines back and don't bother locking the hubs. <sigh>

I understand that, but I have a tendency to think of anything run by a
government that has anything to do with politicians to be a non-profit
operation, whether they intended it to be or not.

A newspaper attacking a radio station doesn't require Pullitzer Prize
winning reporters. It's a way to fill space cheaply. Otherwise, the
newspaper would have to actually do some reporting of consequence.
I'll bet an editor has a tickler file that reminds him it's time to
bash WRR again. Remember, radio is a newspaper's competitor. We're
part of the reason so many newspapers have gone belly up. They can't
take a joke and hold grudges.

>Quite a good station. The So. Cal. Gas Company sponsored a commercial-free
>2 hours every evening. Plus, not far away on the dial, was U. So. Cal's
>student station. With a department of broadcasting, they did a good job
>and for a while had an all-classical format. Them were the days.

KUSC is still at it with an almost-all classical format. The staff is all-professional now, however. A few years ago, they tried a quite innovative attempt to mix classical with other small-audience music forms like show tunes, movie music and jazz, along with personality DJs. The classical music critics screamed bloody murder and pledges dried up, so they went back to the old format.

Right now, the public radio cause celebre in the Southland is KPCC, the former Pasadena City Colleges station with an all-over-the-place music format (mostly staffed by students and unpaid volunteers). In recent years, they'd been doing talk during the day with a professional staff, AAA in the late afternoon and evenings with former commercial jock Shana and students and the unpaid volunteer shows in late nights and weekends mixed in with a few public radio favorites like "Whad'Ya Know?" and "Prairie Home Companion." At the beginning of the year, Minnesota Public Radio bought a management contract from the colleges (I believe the colleges still own the license) and this past spring dropped all local music programming for a news-talk format heavy on NPR/PRI programs (including "Morning Edition" and "All Things Considered" at the same time KCRW runs them). MPR says it plans to put together a news staff and become (at least during the week) an all-news station with a public radio perspective, but for now the only local programs are the talk shows that were already on the schedule, moved out of morning and afternoon drive for "ME" and "ATC." Needless to say, some of the volunteers screamed bloody murder to the media (including the host of a Saturday-night Latin music show who claimed that his show helped keep Latino kids in school, although something tells me that he never played Jennifer Lopez or Ricky Martin on his show). Some of the volunteers have landed on Pacifica's KPFK and Cal State Northridge's KCSN, most haven't. We'll see what happens.

2457. Satellite Radio in Cars

Newsgroup: rec.radio.broadcasting
Date: 2000-06-14 00:00:00 UTC
From: DJ Misty <toml@charter.net>
Message-ID: <0bY15.6530$kr.254096@sol.newscene.com>
Source record: 19113

I just got done reading an article at MSNBC.com about the emergence of satellite radio in cars. According to that article, most domestic manufacturers will have receivers available in their cars sometime next year. Sounds like subscriptions willl cost about 10 bucks a month, and people will be able to listen to the same channels anywhere in the US.

ACK

I've been out of the business for awhile, but this can't be good news for traditional broadcast stations. True, national music services can't possibly give listeners local content (at this point anyway), and wouldn't be able to generate the type of listener excitement that a decent broadcast station can. What they *can* do is give the listener any type of music he or she likes, with minimal (or no) commercials.

Unfortunately, it's getting harder and harder to find stations that are really compelling to listen to. I live in the Milwaukee, WI area, and radio here is b.o.r.i.n.g.. At least 3 f.m. stations in the city program essentially the same music (adult a/c) and have the same sleepy delivery. Many of the stations in outlying areas here have either canned or satellite programming. There is *one* decent hit music station in Milwaukee (KISS-FM), but their music is so diverse that T.S.L can't be very long.

I don't know what it's like in all parts of the U.S., but but I can't help but think that *here* at least, there's not much competition for all-music, no commercial digital radio.

Even though I haven't been in it for awhile, I still love radio and I think it'd be a shame to let this technology get the better of the industry (it's happened before- ie. cable tv).

Radio has the ability to move it's listeners in ways that a music service could never match. Unfortunately, so many stations have reduced themselves to music services with commercials, and not much else.

Contesting builds listener anticipation and excitement. Station events and promotions put a face on our meduim. Good air talent (which costs money) serve as the host of their own party, with each listener being a guest who feels welcome and has a great time.

It's time to get some creativity and excitemnet back into radio. Be pro-active rather than re-active.

Ok. I know this was kind of jumbled, but I hope you get my point :)

AUDITION PREPARATION COURSE
BROADCASTING

An audition preparation course will be run for potential students applying to audition for the WA Academy of Performing Arts full-time BA Broadcasting course in 2001.

The course will be run over two days for a total of 12 hours, 6 hours each day, 9am - 12am and 1.00pm - 4pm. Course dates are 20 and 21 July 2000. Course fee will be $200 plus GST.

The course will cover all aspects of the audition process, students will be given news items and other copy to read and practice, and will actually participate in a trial audition.

Enrolment forms can be obtained by contacting Melinda Fisher/Gwen Foote on 08 9370 6633 or by email m.fisher@cowan.edu.au or by writing to Western Australian Academy of Performing Arts, 2 Bradford Street, Mt Lawley, Perth 6050

For further details about the audition preparation course or the full-time course please contact Andy Copeman, Lecturer in Broadcasting by return email or visit http://waapa.cowan.edu.au/disc/bcast.htm.

there are tons of MP3 programs available as freeware, shareware, or
purchase. Try MP3.com for a reasonably full listing. Grab a couple of
demos, try them out and use which one you like best.

I used Right-click for about a year. Once you get it set-up it's fine,
but a little slow, simple graphics. I do like that you have full control over
bitrate parameters and VBR. My preference is for something using the
Fraunhofer codec rather than the Blade front end (there IS a slight
difference), so that's why I use the Syntrillium MP3 plug in for Cool edit
Pro. Much fuller sounding and about 6 times faster in conversion.

I don't wish to burst your bubble, but you may want to consider carefully going into radio. This is an apprenticeship business...you start off at a small station, where you will do everything including working killing hours and probably sweeping out the studios too. You'll have a long climb to the point at which you'll actually make a living wage, unless you're extremely talented and get quite lucky. Worse, so many of the small stations have automated their entire operations that you will have trouble even finding a place to start out. At this point, I won't even talk about some of the small-station owners I have known....but the regulars in this newsgroup will know what I mean.

OTOH, if you have training as a voice/data tech, you're all set. Computers are what's happening now, and people with your skills will always be in demand. You'll make a living wage right from the start, and you won't be at the mercy of employers with no money.

Your ego has been built up by well-meaning people, but remember that you have to be able to put food in your mouth and a roof over your head. Good luck on whichever path you choose.

Actually, I think it's very good news for radio. It will inspire local
stations to offer things of interest to their communities. I'm hoping
to see freshened news departments and community service.

Local jocks playing the same music as the satellite folks won't do it.
Credible news and information is the way to compete with it. I have
Music Choice on my cable system. I find it horribly compressed,
technically, and lifeless from a hifi standpoint. The music just lies
there, one cut after another - no human life.

Unfortunately, news is a very expensive format if you want anything
other than rip 'n read or steal from the newspaper. That's why there
are so few stations that do news any more -- and why Metro/Shadow
Traffic got into the news business. There are lots of cookie-cutter
newscasts and traffic reports in Houston! Same voices different
stations.

To the WCBN Family and our friends working for free speech:

At this month's WCBN board meeting, we voted not to continue
funding our contract with Pacifica. I released a statement yesterday with
all the details. Check out our pacifica page, for more information.
(http://wcbn.org/pacifica.html)

This is the letter I both sent and released publicly this morning:

June 15, 2000

Bessie Wash, Acting Executive Director
Lynn Chadwick, Retiring Executive Director
Mary Frances Berry, Chair of the Board
Pacifica Foundation National Office
2390 Champlain Street NW
Second Floor
Washington, DC 20009

Dear Ms. Wash, Ms. Chadwick and Ms. Berry,

As you may know, WCBN has been on a dues strike during the 2000 Fiscal
Year to protest what we believe to be unfair labor practices, disregard
for the founding principles of Pacifica, and neo-fascist actions on the
part of Pacifica Management.

For these reasons, the deteriorating integrity and quality of the Pacifica
Network News, and demands from our listeners and the staff, WCBN ceased
airing PNN effective yesterday. We also hereby serve notice of our intent
not to renew our three-year contract set to expire on October 1.

In meeting to approve the FY 01 budget, the WCBN Board of Directors moved
not to renew funding for the contract. The board also moved to allocate
the total amount donated to WCBN, in protest of Pacifica, to your striking
contributors working on the Free Speech Radio News and spend last years
budgeted Pacifica allocation to purchase desperately needed new equipment.

While we salute the work of Pacifica over the years, in light of recent
events, we cannot in good conscience continue to call ourselves "Radio
Free Ann Arbor" while supporting an organization that does not, in its
actions, support freedom of speech or the democratic process.

We also implore the Pacifica Board to immediately meet the strike demands
and restore Pacifica to serving in the Public, not the Private/Corporate,
interest.

Sincerely,

Nick Farr
WCBN General Manager

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an

intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

2467. Re: Satellite Radio in Cars

Newsgroup: rec.radio.broadcasting
Date: 2000-06-15 00:00:00 UTC
From: se <steve5@airmail.net>
Message-ID: <394945DB.131D@airmail.net>
Source record: 19123

have to disagree!...what direct sattelite radio will do is the same as what direct sattelite tv has done. for more choices, viewers could care less if the show they enjoy is coming from a local affiliate or somewhere in the bahamas. sure there will be straight segued music channels of every conceivable format (the 1983 channel!) there can also be high profile personality stations that aren't necessarily generic, but are nationally relatable and humorous. sure they may not be talking about traffic on a freeway in their city or a news item from that mornings newspaper..but then, how many LOCAL stations are doing that anymore anyway??!!...most are talking 4-6 times an hour most of the times using position statements and brief comments if any. Certainly in the outlying urban areas it will be a hit because it will be more professional than what many are able to recieve in those areas, but i wouldn't be surprised if it even more successful in cities too.
if you are naive enough to beleive this will not affect radio as we know it today - you probably thought AM would live forever as a music format too!

Thank you for your assistance. I think I will try to somehow involve myself with radio part-time and keep my technical day job for now. But later down the road I would like to be involved with radio full-time. I'm sure it will be a rough road, and maybe I won't actually enjoy it, but I am determined to try. What do you mean about the 'small-station owners'? Are they extremely cheap and unfair or something?

I would add a step before pushing record:

Press start, wait a second or two, then press stop, to get the splice past
the heads.

>Hi there - I would like to begin a career in the broadcasting industry, but
>I don't know where I should start...

Personally, I'd reconsider. Opportunities for young talent are going to be very scarce for a while, for one reason...too many stations are in too few hands now, and increasingly they're being centrally programmed by satellite, hard drive and automation. Radio listenership is in decline partly as a result of lower quality, overcommercialization and insufficient local content. Eventually that will change, because revenue growth will stop and they'll have to change course and improve content. But we're a couple or three years away from that... In the meantime, Vic, don't pass up better opportunities outside broadcasting to pursue a dream that's likely to frustrate you at least in the short to medium term.

2472. Website advocates MP3.com boycott

Newsgroup: rec.radio.broadcasting
Date: 2000-06-16 00:00:00 UTC
From: Bob Nelson <bob@inkwellpress.com>
Message-ID: <B56F9832.3E32%bob@inkwellpress.com>
Source record: 19128

June 15, 2000 - 11:30 AM PDT
FOR IMMEDIATE RELEASE - Website advocates MP3.com boycott

NetRadioLive, an independent Webcasting site operated by Jordan Dorf and NetMediaLive Productions, has issued a call for independent artists, musicians, and Web listeners to boycott the MP3.com service immediately. This boycott stems from an inflammatory statement filed in court by MP3.com CEO Michael Robertson on behalf of the RIAA, as part of a collective effort to shut down the Napster file-sharing service.

According to Jordan Dorf, CEO of NetMediaLive Productions and host of the NetRadioLive webcast, "In this brief, Michael Robertson and his company are trying to assert proprietary rights over independent works. Artists submitted these works to MP3.com under a non-exclusive promotion agreement, yet Robertson wants to block them from promoting these same works on Napster and other file-sharing services. This is hypocrisy, and in its desperate attempt to appease the RIAA, MP3.com is now screwing the artists and the listener community that helped it become successful in the first place.

"We urge independent artists to remove their MP3 files from MP3.com immediately, and to send a clear message to MP3.com that they will take their eyes, ears, and MP3 files elsewhere until Michael Robertson retracts this outrageous, hypocritical statement."

The original Robertson brief, as it was filed on behalf of the RIAA, can be found at the following URL:

http://www.riaa.org/PDF/robertson.pdf

More information about NetRadioLive and the MP3.com boycott can be found at the following URL:

http://www.netradiolive.com

Requests for comment may be directed to Jordan Dorf by telephone at (877) 959-8256, or by e-mail at netradiolive@netradiolive.com .

Has anyone been to the new FCC MAss Media Bureau reading
room since it moved to "the Portals" from M Street?

I'm wondering if the procedures for getting documents is the same,
is the same stuff available as when it was on M Street (or are there
certain things that didn't makethe trip and were discarded?)

Would also like to hear about hours, logistics, best Metro
stop to use, etc.

Thanks

The WWJ plant has nothing to do with radio. It was relocated to
accommodate DTV.
It just happened to work out to be a convenient power increase as well.

No, if you're talking about the abrupt ending. The same thing
happened when they reran the show in '75. Chances are, I think,
that the credits or other ending material may have been
inappropriate five years later, and there may not have been time to
fit in current credits. Or maybe they needed to fit more units
in the stopsets in '75 than '70.

There used to be an all comedy station in the L.A. burbs.. KMDY 850am a few years ago. There were problems trying to edit material by the really hot comedians for broadcast...some of it was blue,so we played mostly classic stuff..plus the format was impossible to sell to advertisers. We called it America's one and only comedy station..and it may well have been the only one.

>>
I did some checking on WRBC found that they are currently listed in the FCC DBase as WOAD and they are a Class B broadcasting on 1300 KHz with 5K days and 1 K night, ND1. What's the deal?
>>

1300 is littered with loads of Class III-B stations which could not operate ND even with 0.5 kW, but it does have a few Class III-As and a few Class III-Bs, all of which operate ND, and a few interesting Class Bs.

Class III-As on 1300 include:

WOAD, 5/1 kW into a 197 degree tower, with an efficiency of 350 mV/m/kW at 1 km (rather low for almost 200 degrees; perhaps a poor ground system) [*] ,

KVOR, 5/1 kW into a 95 degree tower, with an efficiency of 308 mV/m/kW at 1 km (about average),

WTIL, 1/1 kW into a 95 degree tower, with an efficiency of 308 mV/m/kW at 1 km (about average).

Class III-Bs on 1300 include:

XEP, 1/0.5 kW into a 98 degree tower, with an efficiency of 287 mV/m/kW at 1 km (a litle lower than average).

Class Bs on 1300 include:

WNQM, 10 kW days into a 98 degree tower, 5 kW nights into five 98 degree towers, with a CP for 50 kW days, still ND days, and

XEXW, 5/0.25 kW into a 171 degree tower, with an efficiency of 368 mV/m/kW at 1 km (a litle better than average) [**] .

[*] The presence of a Class III-B station in Baton Rouge, LA, only 140 miles from WOAD effectively makes this Class III-A just about impossible to expand. There are unfortunately a number of Class III-As what are unexpandable, because of encroachment by Class III-Bs.

[**] Couldn't be a Class III-B because of 0.25 kW nights, therefore it must have been added after "Rio" or it was "grandfathered".

>Computers
>are what's happening now, and people with your skills will always be in
>demand. You'll make a living wage right from the start, and you won't be at
>the mercy of employers with no money.

No, you'll be at the mercy of "speculators" who buy stations just to re-sell them, "laying off" employees to cut the budget in the meantime...and then, if you survive THAT, you'll then be at the mercy of the people they sell the station TO...who wish to cut payroll some MORE while THEY're waiting to sell the place again
to somebody else. After 35 years of being "in love" with radio work (read: feasting on one's own creative "juices" instead of a decent wage), I find it's now not just "less" opportunities in radio...there is NO opportunity! (If you're independently wealthy and a student, go ahead and intern for free...you'll have SOME
degree of enjoyment).

>Personally, I'd reconsider.

I have been in this goofy business for 33 years, and I must, reluctantly, agree with Bob, in his analysis of full time radio. Part time might be the way you want to go. I had a choice between studying radio, and pre-law, a long time ago, and if I had known then what I know now about long hours, lousy pay, lack of job security, and the difficulties of moving up, I would have gone the law route, and done radio part time. If you have any inclination to try something in computers, I would go that direction, and keep the radio dream going with part time work.

After having spent 35 years in broadcasting a banker friend asked me to help him find a buyer for some equipment they once had financed. A storage unit in Omaha, Nebraska is full of equipment they want to sell.

The big item is a Bext 500 FM transmitter, a pair of Marti composite STL

units, antenna cable and lots of studio equipment. They have an offer of $12,000 from someone formerly associated with the station. If you are interested, I will be happy to fax you the 4 page list this weekend. This may be a savings for someone building a station.

Vic,
Better you should get into this wacky business and find out for yourself than wonder what would have been when you're turning 70.
I've been in radio part time for 15 years and it suits me just fine. I earn my living M-F but get to do what I really want to do on the weekends.
The only advice I would offer to you is to get in, get started, learn as much as you can, then go and create something that's your's that you can sell. There are fewer and fewer opportunities for DJ's with syndication and automation.

For Bob at Talk1370, if you feel that opportunities will open up in 2-3 years then Vic is getting in at just the right time. He'll have a couple of years to get some experience and develop his own style.

Good luck Vic.

Best,
Mike

You are about 80% right Ron, but WTMS/WAOA are not owned by MegaOwnership,
Inc. and the company I work for is a small operator, and radio is still very
much enjoyable. In fact, I am having more fun now than I have had since my
first radio job (interestingly enough at WTAI) 27 years ago.

> been the only one.

There was WJOK somewhere east of the Mississippi. I think KMDY lasted a lot longer (1982-1991???)

Or was that a sports station (W-Jock) rather than comedy (W-Joke)???

I have Music Choice too, and generally like it. Supposedly the music libraries for a given format are bigger than that of the average radio station. Plus music radio stations are starting to have too much talking--not just commercials, but promos, DJ's chattering about nothing, etc.

When I want news or talk, I listen to those stations. At least in LA, KNX and KFWB do a pretty good job of letting me know what's going on locally.

>Not nearly enough comedy on the radio outside of lame cranked-out
>morning show parodies-du-jour...

Actually, the treasure trove of radio comedy right now is weekend public radio. Between "Car Talk," "Whad'ya Know?," "A Prairie Home Companion," "Rewind," "Le Show," "Says Who?," "Wait, Wait, Don't Tell Me..." and "Riders Radio Theater," there's a lot of comedy shows out there (even if most of it is topical and/or in a game show format). "This American Life" has a little comedy mixed in its format, as well. And a good portion of the shows are popular, which bugs the elitist snobs who think they own public radio no end, because these "undiginified" shows are on instead of their precious National Press Club luncheons, Chataqua lectures and classical music shows. I say they should stop being so serious all the time.

Source record: 19007

Bob Smith theorizes that:

> "Radio listenership is in decline ... Eventually that will change, because revenue growth will stop and [the owners will] have to change course and improve content."

I would suggest instead that declining revenues would be more likely to cause most owners to reduce costs, not spend more. That in turn will lead to fewer jobs on the product side, not more.

My suggestion for anyone looking for an exciting future in radio would be to go into sales, if you have any aptitude in that direction. Those jobs have been increasing and will continue to do so.

If you are really good at it, you will be able to bring in the ad bucks even if times get tough. If not, you may not make the cut. But neither will everyone in programming.

Not trying to be pessimistic, please understand, but just projecting from reality rather than dreams.

>The WMCA CP has expired. At this time they are not refiling.

Too bad. One way they might luck out, though. They share their towers and ground system with WNYC (820 kHz, 10 kW-D. 1 kW-N, DA-2). WNYC also was exploring adding towers to allow an increase to 50 kW-D, 10 or 25 kW-N...and if they ever do that, WMCA could piggyback on THAT to revive the power increase. They could conceivably work out a cost-sharing arrangement and share title to the site (where WMCA is now the landlord and WNYC the tenant). WNYC staffers were talking about that a couple years ago...maybe it might still happen.

Perhaps, instead of selling more stuff that no one needs for no purpose other than to generate more profit, some thought might be given to new uses for the medium. Using the axiom 'niche is everything' it surely makes sense to deliver the ultimate niches. If you really want to make some noise (and some cash) in the radio game, invent something new. For example, top 40 didn't invent itself, neither did it come about by accident or evolution.

In article <8ij7gc$78n$1@sshuraab-i-1.production.compuserve.com>, James A Smith <76003.1412@CompuServe.COM> writes

2504. Re: A place to find old top-40 charts?

Newsgroup: rec.radio.broadcasting
Date: 2000-06-18 00:00:00 UTC
From: Jim Zimmerlin <jimzim@charter.net>
Message-ID: <skqgn26ue7f185@corp.supernews.com>
Source record: 19010

That was fairly helpful, thank you! They have their playlists for each week from 1960 - 1982. The exact URL, in case anyone else wants to look at them, is:
http://musicradio.computer.net/surveys.html

Now, what I'd really love to find, in case anyone knows where they might be, would be a Top 100 list for the whole year. The weekly lists are good, but you have to go through a lot of them to get the information for the whole year.

Thanks again, Robert, for your help.

> >I'm interested in finding lists of the top radio hits from the 70's and

They'll probably want to tap your computer abilities more than any
announcing abilities. Under the right circumstances that can bring
decent $$$.

Remember most stations are not much more than a cluster of computers
these days.

>It does illustrate once again why WRR needs badly to be placed in an
>arts trust -- an arrangement similar to the one being used successfully
>for classical stations in Seattle and Boston as I recall.

This has been proposed from time to time as I recall. However, I don't think
anyone has had the resources to pull this off.

Why? Simple: the city apparently wants at least $30 million for the station.
No one can afford to raise the money to buy it at that price and run it through
a non-profit trust.

Putting all that aside for the moment......
It seems to me the best thing to do would be to work out a deal with the folks
at KERA to do a trust. They've got a huge new facility to house all of their
broadcast properties and I'm sure there's some way they could handle WRR.

I agree. Although the FCC's records do not indicate a change, I could swear that WXYT's signal is worse than it was 20-30 years ago. Perhaps it's just the urban sprawl and the man-made noise, but I could remember hearing a decent signal in Toledo in the 1970s, and now it seems you have to be north of Monroe before it's OK. Same to the north, they get bad when you get into Lapeer and Livingston County.

I listen to 4 hrs. of Imus on WXYT 1270 from Columbus OH, which proves it's putting
out signal, a distance of 175 miles.

I do have to null out WUCO 1270 Marysville OH and WILE 1270 Cambridge OH at
40 and 60 miles respectively; however the signal from WXYT is respectable.

(In the winter sometimes WMKT 1270 in Charlevoix MI is competition (390 miles).)

You don't say if you're in your car; if so, recognize that the quality of
car AM radios is abysmal compared to times of old.

If at home, try getting a MW loop (Radio Shack $25, or the Terk Loop, or Select-a-tenna)
and set it next to your radio and see if you can't hear them. You should hear somebody
on every frequency with a MW loop.

WXYT's signal is bad in parts of western Wayne County because the antenna array for WYUR-AM 1310 is located in Taylor, on I-94 between Telegraph Road and the Southfield Freeway. It is nearly impossible to hear WXYT while driving anywhere close to the WYUR sticks.

ccording to this weeks "Newsline":

ENFORCEMENT: FCC FORFEITURE
NOTICE FOR WRONG PRIZE

The FCC has issued a Notice of Apparent Liability for Forfeiture to a broadcaster that did not
disclose all the facts in a radio promotion.

The station in question conducted a contest called "Millionaire Monday" without disclosing that
the prize was one million Turkish lira and not one million U.S. dollars. It turns out that one million
Turkish lira was worth about $1.90. Needless to say, the prize recipient was not thrilled.

>be high profile personality stations that aren't necessarily generic,
>but are nationally relatable and humorous. sure they may not be talking
>about traffic on a freeway in their city or a news item from that
>mornings newspaper..

I'm curious, I look at the listings for DirectTV & DishTV, the two largest satellite sources and compare them to cable. About the only differences I can see are two of some channels one gets on cable, most of the time not enough for someone happy with cable service to change for.

Someone with broadcast TV might consider changing, but most folks just getting broadcast now are going to stay that way for quite a while. I don't see satellite radio as a major improvement either, unless satellite radio is going to be a major niche filler. Sure if you live in a big city with no classical music, or no jazz, or no house music, or no tech, or no whatever, you might consider subscribing, but if your tastes are broader than what the service provides, your only other choices are pre-recorded music or the broadcast radio already disdained. Judging from the satellite delivered sources already available via satellite TV, local radio isn't in trouble yet, besides the ability to offer local services is important, I note that satellite services have begun to offer the big four network stations in major markets along with a PBS feed, implying that people want some local service since they pay extra for it.

I'm talking about car, or portable radio, Ron. I can hear a heck of a lot
using a Sony 2010 and either a Bob flick loop or the NRC loop to attenuate
or enhance signals. In fact, there are times I can null local WIMA-1150
and get several others 1150s. But, that is DX and not what I would call
"regular reception".

No one needed Top 40. It was invented to generate profit. Ultimate
niches, by definition, serve small audiences. At some point someone is
going to notice the bills aren't being paid and "Radio Free (insert
city name here)" will have good-for-nothin' employees who have the
gall to want to feed their families.

No one is going to buy the station for $30 million and keep a
classical format. It'll become the 32nd alternative, alternative to
the alternative stations.

Remember KFSD in San Diego.

I assume the station didn't mention in its contest rules that it
wasn't US dollars. That's probably why they issued a notice of
forfeiture.

Even more serious than that is the damage done to the station's
credibility for actively trying to deceive its listeners.

Now if they said they were using "250,000", they could be in trouble.
Not that anyone was likely to mistake a 250-watt Class IV for a 250KW
clear-channel. On 1570KHz today, on the other hand.....

KCJJ-1630 continues to claim to be "Eastern Iowa's Most Powerful Radio
Station". Strange, I guess all those 100KW FMs in the FM Atlas (and
50KW KXEL-1540) don't actually exist? Either that, or they're using NBA
geography and consider Waterloo to be in Western Iowa...

To a growing extent, traditional stations aren't offering local content either. There are only three things that will protect satellite-fed traditional stations from satellite DAB:

1. Subscription fee. People subscribe to enough stuff as it is. The line gets drawn somewhere. (I think this service could potentially make more money by dropping the subscription fee and going completely advertiser-supported)

2. Lack of announcers. People *want* to hear a human voice once in awhile - if they want continuous music, they put in CDs/tapes. No radio station, no matter how good the music director is, can possibly program a "better" music mix than the listener themself.

3. Protectionism.

The "driving into a tunnel" problem *will* be solved eventually. The technology already exists.

> Unfortunately, it's getting harder and harder to find stations that are

I'm a Milwaukee native who spent last week up there visiting relatives. Wanted to refute this statement, but I can't! You *do* have some good spoken-word choices in the land below 92MHz. (if you live in Waukesha Co. and have a good car radio, try 89.9FM for WORT out of Madison - you never know what you'll hear next!)

I drive to work from Livonia to Plymouth 5 nights/week. There are
some deep null(s) in WXYT's pattern apparently during that stretch.

I don't do much MW DXing these days. I heard all US states with my
4-ft square loop except for Hawaii- never tried for that last state,
though. I even picked up the 800 KW German station somewhere near 1.6
MHz one night in Madison, WI back in the 1970s.

I noticed that KZMP-1540, here in DFW is now running the Z-Spanish "La Bonita" format.....essentially it's Spanish MOR/Soft AC. I even heard a cover of J. Frank Wilson's "Last Kiss" in Spanish. Z-Spanish on their website says that around a dozen stations nationwide air part or all of it. The FM counterpart at 101.7 still airs the Z-Mega format.

2522. Quack testimonials from on-air people

Newsgroup: rec.radio.broadcasting
Date: 2000-06-19 00:00:00 UTC
From: Frank Provasek <ropertex@ix.netcom.com>
Message-ID: <394E6BC3.4CB@ix.netcom.com>
Source record: 19028

Can someone describe the marketing procedure for all these weight loss and impotence products (quack, according to the FDA) on the major AM stations at drive time?

The testimonials from the on-air people try to sound like they aren't ads. Often personality A comments that traffic reporter B looks better these days. Reporter B then starts, "Hal, everybody should know about etc etc" Whatever the different city and station, the scripts are similar, with a lot of "you know's, "golly-gee's" thrown in...

I have seen it over and over for years... Simultaneously in 10 or 20 big cities, one of the on-air persons has started using some product that
no one ever heard of before. They are getting GREAT results and "just want
to tell everyone about it."

What's the deal? Does some marketing company search for fat radio hosts, and
get them started on this product in advance, so they can immediately talk about
results when the commercials begin? Since the FDA says these "lose weight while
you sleep" products are worthless, why do they work 100% for the weather guy or
the sports guy? Does the ad contract call for cancelling the ads if the product
does not work? Is there a lot of dollar pressure from the station to "make sure"
it works?

40 years ago when Dave Garroway hosted the "Today" show, some lady was brought
out once a week to be weighed on camera for some weight loss product. She lost
weight every week, but later it was revealed that in addition to the quack product,
she was using some powerful stimulants and appetite supressants provided by a
doctor hired by the company...along with laxitives and water pills.

Doesn't look like much has changed in 40 years.

Even better, I can remember a college station with a full blown description of broadcasting with 10 Million microwatts. However, please note that neither of the stations we're mentioning is deceiving anyone but the overly credulous. Just saying you can win one million without detailing the unit of measure has implications. Besides, if I advertise contest advertising one million, I better carefully say one million one thousandths of a mill if I want to be cheap. Of course, I note that people would jam phone lines for 1 million pennies, and the FCC would say nothing if a station actually clearly stated one million pennies.

Here in Dallas/Fort Worth, it's MetaboLife and some other weight loss product. The second is one that you drink 3 hours after your last meal for the day and it burns fat while you sleep!

Sounds like some sort of a trade-out for all the fat DJs. ;-)

Bill in Fort Worth

I've often tried to figure this one out. When I was in the general area of San Francisco, our mid-day personality (who shall remain nameless as shall the station) was always hawking metabolife... Problem was the girl only weighed 87 pounds (no joke, I know this personally) to begin with!

That's it...I've heard that junk being hawked on Merge 93.3 here in DFW.
I can't help but wonder why stations are willing to destroy their
credibility with this crap.

Well, here in Chicago, the buy on one station was more than a
Million last year. Metabolife made an offer to the jocks to pay a
per unit fee for the endorsement, if they'd be exclusive to
Metabolife.

Since the ingredients are 'all natural' the station doesn't fear
taking a hit if the product should have unexpected side effects, and
the cash goes along way toward insuring a GM's tenure.

Of course, cocaine is 'all natural,'....so is cobra venom. But
nobody's thinking about that.

There was a huge power staff meeting at my station when the FDA
set it's sights square on Metabolife over the unrestricted use of
ephedra, the herb producing ephedrine, the base for some designer
drugs targeted by FDA. When the FDA action was announced, the GM
held a meeting and put a bottle of Metabolife on the table, told us
all he had taken it to his doctor, who had dismissed it as no more
dangerous than a cup of coffee. And anyone offering further comment
on the subject will find his employability under review.

Within a few weeks, everyone of the on air staff was endorsing
some sort of fat tablet or solution, some making incredible claims
that Art Bell wouldn't entertain.

Hey, it's radio. Money talks...Bullshit walks the talk.

Billboard publishes the complete Hot-100 list for each week in a specific volume for each decade, available from Joel Whitburn's Records Research. They are very expensive, but well worth it if you're looking for complete chart info.

I'm Joe Williams, a composer and music producer based in Leeds, West Yorkshire, UK. I write original music and songs for media, including radio, film, TV, video, websites and computer games. My pieces range from short jingles or stings, through theme tunes, up to full feature scores, all in a wide variety of musical styles.

My new website has just been completed and can be seen at http://www.joewilliams.co.uk

Features include:

- examples of my work
- details of my services
- case studies and client list
- links to other sites of interest

I hope you'll visit the site, and I'd be particularly interested to hear from you if you have any thoughts about the kind of sites you'd like to see featured on the links page, sites that would be of interest to you and others like you.

Thanks,

Joe

I have Music Choice too, and generally like it. Supposedly the music
libraries for a given format are bigger than that of the average
radio station. Plus music radio stations are starting to have too
much talking-- not just commercials, but promos, DJ's chattering
about nothing, etc.
When I want news or talk, I listen to those stations. At least in
LA, KNX and KFWB do a pretty good job of letting me know what's
going on locally.

2536. Govt Broadcasting Agency Bars Material From the American Public

Newsgroup: rec.radio.broadcasting
Date: 2000-06-20 00:00:00 UTC
From: Michael Ravnitzky <MikeRav@ix.netcom.com>
Message-ID: <8inre3$8p9$1@slb0.atl.mindspring.net>
Source record: 19042

Government Broadcasting Operation Shields Its Publications From The American Press and Public
By Michael Ravnitzky, Attorney at Law,
MikeRav@ix.netcom.com

U.S. Government broadcasting agencies refuse to permit public scrutiny of their publications. These agencies, formerly known as the Voice of America, deny access to the American public to the very materials those organizations broadcast to the rest of the world. Surprisingly, these agencies fight any attempts at access by the press under the Freedom of Information Act.

For the first time, this article describes the existence and identity of the governmenti¿½s pre-written obituaries for hundreds of newsworthy and controversial figures, and provides instructions on how to get a copy of these interesting documents.

THE PLAYERS

The International Broadcasting Bureau (IBB) is an agency of the U.S. government. It was established by the International Broadcasting Act of 1994 to consolidate U.S. nonmilitary broadcast services. The IBB is responsible to the Broadcasting Board of Governors, which is appointed by the U.S. president and confirmed by the Senate. The bureau was formerly funded under the U.S. Information Agency (USIA) until Congress passed the Foreign Affairs Agencies Consolidation Act of 1998, which abolished the USIA.

The largest portion of the IBB is the Voice of America (VOA), established in 1942. The VOA provides news, features, music, and U.S. government policy statements to an audience estimated at over 85 million people per week. VOA broadcasts on short- and medium-wave radio in more than 50 languages, and operates television programming and Internet services.

Another division of the IBB is Worldnet Television and Film Service, a satellite broadcasting facility established in 1983. The IBB's Office of Cuba Broadcasting operates the controversial Radio Marti, which started broadcasting in 1985, and TV Marti, which telecast its first program in 1990.

The Broadcasting Board of Governors also oversees the operations of two private, nonprofit corporations that are funded by the U.S. Congress: Radio Free Europe/Radio Liberty, which each week sends 700 hours of radio programming in two dozen languages toward the countries of Central and Eastern Europe and the former Soviet Union; and Radio Free Asia, which broadcasts in eight Asian languages.

WHY ISNï¿½T THE INFORMATION AVAILABLE?

Does the American press have access to any of this massive amount of broadcast material, to ascertain what the U.S. government is disseminating overseas? It seems that the answer is no. The Broadcasting Board of Governors refuses to disclose to the press and the public the contents of news and information it sends out to the rest of the world. It does so under a little known clause in its statutory operating charter that prevents broadcast of Voice of America-type material in the United States. Congress has indicated that the purpose of this clause is to keep the federal government from broadcasting propaganda to United States citizens.

Citing this clause, the Broadcasting Board of Governors simply declines to make its materials available. Even when the Board receives a specific Freedom of Information Act request from the public or the press, it declines to provide documents on the grounds of the b-3 exemption, which is intended to protect records which are specifically prohibited from disclosure by a statute other than FOIA. The Board cites the U.S. Information and Educational Exchange Act of 1948 (22 USC. 1461), which it claims prohibits the BBG from releasing within the United States information about the U.S., its people, and its policies when the information has been prepared for audiences abroad. Thus far, the federal courts have upheld challenges to this policy, deferring to administrative discretion and inviting Congress to clarify the matter.

ARE THERE ANY EXCEPTIONS?

The BBG admits to two small loopholes. First, overseas individuals and press can request documents from the Board and its components using the Freedom of Information Act. The requester must be outside of the United States. However, it is unclear whether an overseas arm of an American press organization would be granted records access in this manner.

The other loophole is that the law appears to provide that upon request such information shall be made available at the BBG offices in Washington, DC, but for examination only (i.e. copying is not permitted).

Another partial exception is the availability of certain programs placed on the agency website, at www.ibb.gov.

THE PRE-WRITTEN OBITUARIES

Like some other news organizations, the Broadcasting Board of Governors maintains a file of pre-written obituaries of world notable figures. These obituaries are compiled and maintained in both textual (transcript) and also in pre-recorded audio format. (Obviously such details as the date and manner of death are omitted until required.)

The BBG has recently denied access to copies of many of these obituaries, citing the b-3 and b-6 (personal privacy) exemptions, but for some reason has released two of these obituaries (Boris Yeltsin and Fidel Castro) in response to a FOIA request. The case number of that request was 00-1047F1, the request for which was submitted on April 4, 2000 and the response sent on May 2, 2000. In an odd development of questionable legality, the Board is now refusing to release even these two obituaries to other requesters despite the statutory requirement that requires release to all requesters if

a document has already been released to one requester. The FOIA Counselors at the Justice Departmentï¿½s Office of Information and Privacy have no explanation for the Boardï¿½s selective release to one requestor but not to other requesters, which they confirm is contrary to the FOIA laws.

Release of the Yeltsin and Castro obituaries demonstrates that release of these obituaries is free from any foreseeable harm. More important, the disclosure of such factual information about the public life of a high-visibility figure as might appear in an obituary is not a "clearly unwarranted invasion of personal privacy" of the type discussed in the b-6 FOIA exemption such as personnel and medical records. Even if there were portions that the Government felt were unreleasable, it would still be required under the FOIA law to release "all segregable releasable portions", in other words, all parts that did not fall squarely under one of the exemptions.

The existence and contents of the obituaries of world figures identified below not only illustrates how an agency of the United States Government addresses controversial topics in domestic and foreign relations but also helps to explain to the public the operations of these taxpayer-funded government agencies. Despite this clear value to the public, the Board refuses to release these records. When asked about the status of these records last month, the FOIA Manager at the Board stated: "why donï¿½t you do your own research on these people in the encyclopedia?" Nevertheless, the primary reason for press interest in these obituaries, which is to assess the governmentï¿½s stance on the life and accomplishments of these individuals, which sheds light on the operations of government, the primary reason for the Freedom of Information Act and of the existence of a free and independent press.

If you are interested in obtaining copies or audio tapes, or both, for the pre-written obituaries (sometimes referred to as "profiles" or "draft obituaries" cited below, you may send a letter, requesting a copy of, or access to the specific records described, to:

The Broadcasting Board of Governors
Attn: Ms. Lola Secora, Freedom of Information Act Manager
Office of Administration
Cohen Building, Room 3360
330 Independence Avenue S.W.
Washington, DC 20547 USA

Their phone number is 202-619-5499.

In the letter, you should identify if you are a private individual or a representative of the press, and you should include a statement that indicates that you are willing to pay, if necessary, reasonable costs associated with the request. It is unlikely that there would actually be any fees assessed. Each obituary transcript is several pages ï¿½ the Yeltsin and Castro obituaries, for example, are about a dozen pages each.

You can also request a list of all of the pre-written obituaries, which includes additional information such as the date the pre-written obituary or profile was written, some description about the individual, and whether audio tape is available for that obituary.

2538. Audition "tape" question

Newsgroup: rec.radio.broadcasting
Date: 2000-06-20 00:00:00 UTC
From: jsimmers@mindspring.com
Message-ID: <394f7b1f.9498276@news.mindspring.com>
Source record: 19044

After being on the air for twenty years or so, I hung up my headphones and now work outside the radio business. Haven't been on the air for about seven years. Lately I've been toying with the idea of doing some weekend or fill-in hours in the market in which I live, or in a larger market not far away, mostly for the fun of it. My question is: do PDs still want cassette tapes, or will an audition tape on a CD be acceptable? I have no access to studio-grade equipment and no two cassette decks I've ever encountered have run at exactly the same speed. Frankly, it would be easier for me to edit an audition sample on computer and burn it to a CD-R than it would be to make a cassette. A CD is reliable, sounds better, and you can be sure the speed is constant. Obviously, I would ask for the preference of any station I would contact and find a way to send them whatever they needed. Any opinions? Thanks.

Metabolife, Body Solutions, Vitalmin, and more!

Steve Lamb, morning sports guy on WBAP had an endorsement with a medical group that specialized in hair transplants.

And I dare say that you cannot work for Sports Radio 1310 The Ticket without having Lasik eye surgery by one of their sponsoring eye specialists. Lasik surgery seems to be popular all over the dial here!

Car leasing specialists and auto dealers also seek out radio folk to endorse their businesses.....one dealer had an ad in the paper every Saturday saying that you could buy a car from your favorite DJ...he had a couple area jocks on staff selling cars (perhaps the only way the jocks could make any money!).

And there's Paul Harvey.

Endorsements have been a part of our business for years (The Johnson's Wax Hour with Fibber McGee and Molly). They'll continue as long as advertisers see them as effective......and I'm guessing that they are.

This weekend our TV station is doing the St Jude Children's Telethon. As I was prepping the audio system we take on site, I noticed that someone erased out some files. I'm in need of some "rim shots" like the type comics use on stage. If anyone could share some MP3 or WAV files, I would be grateful. I'm also looking for tympani effects, like we could use when they get a new total on the tote-board.

Please send them to: fred@wlio.com

Chip,

Take a look at the 7-Mid daypart from the last book (winter):

KRBV beat KHKS in AQH share with persons 12-17, 12-24, 12-34, and 18-24.

I think it's this new crazy ride this guy made-up. For $60 you can ride
in a airplane hanging by guy-wires to these towers. If you saw those
towers right at the Bethesda exit (by the rest stop), that's what it is.

>That's it...I've heard that junk being hawked on Merge 93.3 here in DFW.
>I can't help but wonder why stations are willing to destroy their
>credibility with this crap.

I've heard no fewer than three people hawking it (WKDD's Keith Kennedy,
WNCX PD Bill Lewis and either Brian or Joe from WMVX's morning crew).

I have Keith's e-mail address and really ought to ask him about it. He
gives a testimonial, even saying that "for the first month, I was still
watching for results, so I didn't want to really say anything at that
point..." -- It sounded like he really did use the product. Maybe he has.

Or maybe he hasn't. It's not that I don't trust Keith or the other people
giving the testimonials, but I have to wonder if the radio stations didn't
go to their air staffs and say "ok, look, we have to have a testimonial, if
you want to keep your jobs, one of you will do it"...

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio
station in Ann Arbor, Michigan. We broadcast at 200 watts to the
University and its surrounding communities from the basement of the
Student Activities Building in downtown treetown. We have been
broadcasting a genre-less overview of music, news, and public affairs
for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform
involves all different kinds of music, including jazz, reggae, blues,

hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

That may be the case. I know at a station I used to work at, the option to decline was only allowed the Morning Guy. When he exercised that option, middays and afternoons were pressed into service without the option to decline. They were compensated, but they were not allowed to decline.

The afternoon guy refused to use the product. So testimonials from callers were important. They spoke generically about results, the boost in energy, but the testimonial was presented as anecdotal evidence, not scientific, to cover potential legal liabilities.

In one case, a talent doing testimonials spoke of his own weight loss, and when it became known that he was no longer using the product, the account withdrew his spots, and the station withdrew his employment.

There's a lot of cash on the line here, and if nobody else does, management takes it very seriously.

Where has skeptical reporting gone? Or for that matter economic
education?

Ohio is paying $2.00 a gallon for gas. Why?

They're calling oil company executives to testify on this ``suspicious''
price rise, and nobody is looking at why they might be doing this.

Ohio is at the end of a broken pipeline. The EPA issued waivers
to St Louis to use Ohio's regular gas; the pipeline itself is running
under EPA orders at reduced capacity; the EPA allocated some of
Ohio's refining capacity to manufacturing reformulated gasoline for
others.

The result is that Ohio is getting all the gasoline it can get.
It can't get any more.

Motorists in Ohio are using gasoline at a greater rate than Ohio
can get it. So the inventories at the Ohio end of the pipeline
are shrinking.

Each week they raised the price to service stations to try to stem
the consumption of gasoline; for three weeks inventories continued
to shrink nevertheless. Finally around $2.00 a gallon people
reduced driving enough so that now consumption matches the amount
of gas that Ohio can get from the pipeline.

The oil companies could not have held the price at $1.37 if their
life depended on it. They would simply run out of gasoline in Ohio.

Where does the extra money go? The oil company gets a windfall profit.
This is the EFFECT of restrictions imposed on the distribution and
manufacture of gasoline, not the CAUSE of price increases. The
price has to rise to restrict consumption. In the 70s we did it
with lines and closed gas stations instead.

Today everybody can get all the gasoline they want. At $2.00 they want
less, is all.

Bottom line: if you want to investigate the high gasoline prices in
Ohio, check whether or not Ohio is getting all the gasoline that it can.
If it is, everything is explained. There's no conspiracy. The price
rise gets the motorists' attention and they drive less to exactly match.

Look next at why Ohio can't get more gasoline. When gasoline is $1.37
in NJ and $2.00 in Ohio, the first news intuition ought to be some
intrusive and ham-handed regulation is supporting the disparity.

Perhaps explaining why people in government who know better are bashing everybody else on the matter.

It's not even reasonable to think they oil companies would get together and say ``Hey, let's raise the price of gas to $2.00. Nobody will notice.'' A conspiracy would gouge you a few pennies over the whole country. It is reasonable that the government would screw up and try to cover it up, though.

Indiana just eliminated their gasoline tax to reduce the price. Theoretically this should have zero effect on the price, showing some profound economic stupidity. The price has to be what it is to reduce driving consumption down to what is available at the end of the pipeline. It must just increase the oil company windfall profit by the same amount, greatly against the wishes of the oil company by the way, a PR nightmare. It makes a little more sense, hint for reporters, if that was the intention of the governor, to create a PR nightmare for the oil companies.

I've been offered the job, and should have paid airfare in hand by
tommorow. I've never been out of the country and this just seems too
good to pass up. Sure I won't be making a lot of money, I will have an
all expense paid trip to Sweeden and make meager wages for 6 weeks.
Many of my friends have done Europe and had to wash dishes or worse
for crappy pay....besides I've done small market radio that pays less
than this gig without the other luxuries.

As long as this doesn't wind up like Bart Simpsons trip to France I
can live with that!

So I ask what a priest would at a wedding....."if anyone can show just
cause, let him speak now or forever hold his peace"!!!

>There was WJOK somewhere east of the Mississippi. I think KMDY lasted a lot
>longer (1982-1991???)

I remember that station, it was in the Washington, DC market (I think on
1120 AM) and maybe lasted a year or two.

It seems like a format that OUGHT to work...except that a lot of the best
material either is too blue to air, or not available for broadcast given the
paucity of comedy albums out there these days. (I think Jerry Seinfeld's "I'm
Telling You For The Last Time" was one of the few chart records in the comedy
genre in the last decade. 30 or 40 years ago, you'd get at least one or two of
them go platinum every year. And I don't think any copies of Seinfeld's stuff
have ever been furnished for legal airplay, or I'm sure it would have turned up
somewhere.)

The new comedy station on the Web doesn't have to worry about censoring
the blue stuff, so it has a better chance of building an audience.

Not from the pattern I saw on the Elliott site. A nice lobe goes to FW
in the day with the equiv of 5KW....and another lobe goes to FW at nite
with the Equiv of about
2200 Kw. Dallas gets zilch to protect the peanut whistle there on 1150.
Actually Xmitter power is given as about 100 w HIGHER at nite. Unusual.

This is rather off-topic for Rec.Radio.Broadcasting so I'll try to bring
it more on-topic: WNCX is giving away free gasoline this summer. Are
there any other stations in other markets that are doing this? (My guess
is, "probably so")

We did gas back in March for $ 1.07 a gallon (when the street price was
about $1.50 gal) and had people spending 2-3 hours in line.
I can imagine what it would be like today with over 2 bucks a gallon!

Any good PD, cookie cutter or not, will accept CDs, cassettes,
minidisks and even open reel tape. I think we're more concerned with
the content than how it's delivered.

The smartest approach is to figure out what playback equipment he or
she may have in the office so they don't have to go to a studio to
hear it.

Sounds to me you have issues unrelated to recording media.

Hi,
Well, as someone interested in the AFR project I have to say the Radio Authority are not exactly interested when you complain. The Pirate radio was broadcasting a dead carrier for about a month before the broadcast. AFR complain - several times - nothing happened. Fortunately the AFR team were able to 'sort it' with RF power. This meant the agreed cover area was covered and everyone else got mush - sad, but effective.

Pirates ruin it for everyone. AFR paid good money for the FM licence to the RA. The sponsors paid money for their adverts to be heard and local people want to listen in. The Pirates could have ruined all that.

There is no reason for anyone not to apply and run a Local Broadcast as the licences are easy to get. The Pirates could become legal as well, but I suppose their fun is ruining everyone else's.

Nick.

They get paid to do this and have no right to get 'fed up' with you. Having said that, I recognise it's an almost impossible task they have. I ran an RSL in Southwest London over new year which had a pirate splattering over us but thankfully it affected only the outer fringe of our TSA so I didn't bother to complain. They are a bloody nuisance though. I have no intrinsic quarrel with pirates. A daft piece of legislation anyway. But I do get cross when they interfere with legit services, especially ones (a lot of RSLs) that so many people have poured heart and soul into often for no financial reward. I think the only way to solve the problem is to set aside a small portion of FM spectrum for the pirate peabrains in which they can all interfere with each other.

2575. KLCE/KJSA - Was: Question for DFW guys

Newsgroup: rec.radio.broadcasting
Date: 2000-06-22 00:00:00 UTC
From: peterh5322@aol.com
Message-ID: <20000622192549.25138.00002183@ng-me1.aol.com>
Source record: 19081

>>
The actual facility setup is 850 watts days (off 5 towers), 710 watts nights
(off 4 towers) with two different patterns.
>>

The four night towers are in common with four of the five day towers, so there
are only five total towers at the site.

KCLE is moving from 1120 (Class D) to 1140 (Class B), conditioned upon KJSA
moving from 1140 (Class D) to 1120 (also Class D).

Don't confuse the Radio Authority (RA) with the Radio Communications Agency (RCA).

For the benefit of North American readers, the role of the US FCC is split in the UK between the RCA, the RA and the BBC.

Commercial radio stations are licensed and regulated by the Radio Authority (RA), which is an independent regulator separate from government. The Radio Communications Agency (RCA) is a government department responsible to the Department of Trade and Industry (DTI).

In the broadcast bands the RA monitors its licences obligations, including technical obligations. The RCA covers the whole radio spectrum and sells licences for communication users. It is the RCA who police pirate radio, raid stations etc. and bring prosecutions. In the event of interference from a pirate to a legal broadcaster, all the RA/BBC/broadcast licensee can do is complain to the RCA or bring a civil claim for damages.

It is obvious that in London the RCA has its work cut out. However a number of Borough Councils (City Governments) have woken up to the fact that pirate radio stations broadcasting from tower blocks (municipal housing) are stealing Council electricity and hence they may take action as well.

Is there not a rights issue here as well? I presume that the VOA doesn't hold US rights to a lot of what it broadcasts. Overseas broadcasters often have special agreements for using material for which they do not hold the domestic copyright, often for a much lower fee than the commercial value, or indeed for no fee at all.

The BBC does not encourage people in Britain to listen to the World Service, and even now BBC World TV is not available in the UK.

This is about the strangest job ad I've ever seen. The
radio equivalent of "hey, high school grads. Travel
all major resort areas with cool business group!" Of
course you end up selling magazines in Egypt, Ohio.
Seriously, if you're single and meet the requirements,
it'd probably be a great six weeks. Just take some
roach bait for the dorm rooms! I'm real curious what
he does the rest of the year with those stations, if
he just needs extra jock/bartenders a few weeks in the
summer. He mentioned one year-round air talent.Is this
operation only on a few hours a day during the
off-season? The target is obviously U.S. tourists.
Any of you folks that take the job, please keep us
posted during and after your stay!!
Also re:"Happenings"....I'm sure it's a language
barrier but I for one wasn't sure at all what your
question was. Brad.

And it is precisely because of this unsatisfactory (unjoinedup) muddle of regulatory spaghetti that we, at SOLO.NET and other community media groups/lobbyists are asking government to house all communications regulation (radio, television, telecoms, point to point, commercial/industrial users, cable, satellite, private, public, community broadcasting, even CB & ham operators) in one place - a super-regulator like USA's FCC. Speculation is that this govt tends to support this notion and we're hoping for something of a breakthrough in the autumn's white paper on communications convergence. Whether or not the emergence of a Communications Authority will have any effect on the problems caused by unlicenced broadcasters is entirely another matter but one would think that it might improve matters. Incidentally, local authorities are not great at prosecuting pirates. They prefer little old ladies who forget to pay their council tax - better success rate.

Copyright and licensing are two areas where VOA does pay less only because it's considered an overseas broadcaster, not a domestic one. In some cases, I would assume they even get material for free just because it's for overseas consumption. If VOA ever became a domestic broadcast service, you know BMI and ASCAP would be beating down the doors to up their licensing fees.

While VOA stated mission is to broadcast its programming to non-Americans, there's nothing preventing a US citizen from listening to any VOA broadcasts, though. The shortwave schedules are published in any of a number of domestic DX-type magazines, and some broadcast information is also available on the web.

Wrt obituaries, I don't think any periodical wants the public to know what they've written about someone who might still be alive. Most every newspaper and magazine has an obituary section, and their pre-written material is not publically available. There's no incidious or conspiratorial plot at work; just good common sense, and a polite regard for the living.

There is one other issue for the VOA and other government broadcasters, and
that issue is US federal law, which in part forbids broadcasting or news
dissemination within the US by said broadcasters. While an obit might well not
be useful, it is also true that releasing it as requested would be
dissemination. FOIA requests are funny things, they can take years to get
fulfilled and some, never quite get done properly. Of course, there's always
federal court to settle the issue. Somehow, I'ld bet nobody goes for this one.

whoever said what these "little guys" offer can be found on FM from the "big boys" is way off base!! KCLE is flagship for "country gold" which is classic country. there is no station playing that outside of the rimshot fm at 92.1 which features a simulcast of KCLE's Country gold to its limited signal area. KCLE is a fine station with a rich history and after the upgrade will put country music back on AM for Tarrant County and peripheral areas for the first time since WBAP abondoned the format for talk. KCLE in fact features Don Day, a former WBAP jock. It's hometown radio at its best...go to the website and check it out. If you like country radio the way it was - they are doing it better than anyone.

> Another I think I see that you might be able to confirm for me: Do
>Tejano formats tend to target slightly younger than regional Mexican?
>2nd generation Hispanics I know seem to be interested in Tejano 107.5.

I am just curious, do the demographic studies account for hispanics that
are very Americanized, ones that dont know Spanish and have very little
emotional connection to the customs of their parents, or more accuarately
their grandparents countries? Growing up in the Bay Area I know many
hispanics who are 2nd, 3rd or 4th generation who fall into this category. So
when a demographic says a area is 25% Hispanic, very possibly close to a
third dont speak any Spanish, so in reality, the market for a spanish
speakibg station may be just 15%.

Also, I do know for a fact that the CHR/Rhyth stations, especially KYLD,
has a huge amount of listeners whose primary language is Spanish.

Really doesnt matter much to folks around here. Neither offers
anything that cant be found on FM at greater power. Just small town,
wanna be, cookie cutters! God forbid they be creative and offer
something different!

Concerning the optimal recording medium for audition tapes...

FM Benton <mrmusic@unforgettable.com> wrote:
> >... Just send the CD and don't bother with the cassette.<<

Rich Wood" <richbwood@mindspring.com> replied:
>Any good PD, cookie cutter or not, will accept CDs, cassettes, minidisks
>and even open reel tape. I think we're more concerned with the content than
>how it's delivered.

The smartest approach is to figure out what playback equipment he or she may have in the office so they don't have to go to a studio to hear it.<

===

McLuhan said "the medium is the message." Viacom's Sumner Redstone said "content is king." I say your target has to be able to play what you send them or they'll never know about the content.

While low tech, a well labeled cassette will get you farther than Mr. Benton suspects, and is more functional than two of Mr. Wood's alternatives.

Minidisks are making inroads, particularly in news gathering facilities, but are not yet an everyday item. Reel to reel tape decks, while much more common, are retreating into commercial production studios.

Just as you don't want to push a PD into commandeering a studio, you don't want to restrict them to their station environment either. I know several PD's who prefer to hear auditions in their cars or at home, away from interruptions at the office and outside earshot of nervous or nosey employees.

Forget esoteric media! Stick to cassettes or CD's. They're ubiquitous and portable.

Agreed. The purpose of going to all the expense of changing
frequencies and adding all that steel was to give Johnson County,
Texas it's first nighttime radio signal (or so I was told). High
school sports in the fall and winter, a local radio station able to
serve the area before Sunrise and after Sunset, etc, etc. More power
to 'em. The station in Mineral Wells (now on 1140) will essentially
just move to 1120 and keep on truckin', only 20 kHz lower. Happy as a
clam.

Bill in Fort Worth

2596. Wilkinson 4NI Portable Field Strength Meter.

Newsgroup: rec.radio.broadcasting
Date: 2000-06-24 00:00:00 UTC
From: Peter Murtha <peter.chicago@rfways.demon.co.uk>
Message-ID: <ESVwzAAieLV5EwFW@rfways.demon.co.uk>
Source record: 19099

Do any engineers on this Newsgroup remember the Wilkinson Field Strength
Meter?
This is an early model solidstate unit probably dating from the late
sixties or early seventies, for the AM Band.
There is actually a picture of the 4NI Field Strength Meter in one of
the NAB Engineering Handbooks.
I am particularly hoping to find out the correct way to use the meter,
because the front panel labelling is non too clear, and there are at
least two completely different ways to calibrate and use the meter.
Obviously a copy of the technical manual would be an enormous help.
The Field Strength Meter is working, but I am wanting to check the set
up and know that I am using the correct procedure.
Any help or assistance that anyone on this newsgroup can provide will be
very gratefully received.
Peter G3WZG.

Swapping a 24 hour frequency for a 250 watt daytime frequency
usually involves some cash to the downgraded facility. I called
KJSA a couple of years ago and chatted about the deal. They
claimed no cash for the swap. "We all want to go home at 5:30
anyway."

As a Clevelander, I enjoyed listening to WWJ for years for
their automotive reports and general news coverage.

But for the past month, WWJ's daytime signal has degraded
to the point of being barely listenable here in Cleveland.

For years it was moderately powerful and could easily be picked up
in my office on my Bose and on my car radios. Obviously, not
as powerful as WJR, but even so it was better than the AM broadcast
choices in the Cleveland market.

Everyone talks about their power increase, but did they
have to make a directional change?

I'm hearing WWJ 950 from Columbus OH, but it requires a MW loop
next to the radio on the kitchen table.

(Radio Shack MW loop is about $25; Terk and Select-a-tenna more.)

Their pattern is at http://www.fcc.gov/fcc-bin/amq?pxt=7894

2601. [WILL-AM-FM-TV] Art Director position open

Newsgroup: rec.radio.broadcasting
Date: 2000-06-25 00:00:00 UTC
From: dperry@uiuc.edu
Message-ID: <3956bcd0.192011399@news.cso.uiuc.edu>
Source record: 18907
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

POSITION AVAILABLE
Art Director
WILL AM-FM-TV
UIUC

STATIONS: All stations provide non-commercial, public broadcasting services and have a strong regional presence. WILL-TV is the PBS station serving east central Illinois, a market of 330,000 households. WILL-AM, a 5,000 watt NPR station, serves much of Illinois and western Indiana with a news and information format. WILL-FM, a 105,000 watt station, serves east central Illinois with predominantly classical music programming. AM has been on the air since 1922, FM since 1941, and TV since 1955. Stations are housed in a new public telecommunications center, Campbell Hall, and are licensed to the University of Illinois at Urbana-Champaign.

LOCATION: The University of Illinois is located in Urbana-Champaign, 135 miles south of Chicago, 180 miles northeast of St. Louis, 120 miles west of Indianapolis. The University setting (37,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreational facilities. Local schools, libraries, and shopping areas are excellent.

POSITION: Regular full-time academic-professional appointment. Employee is a member of the Development Department of the Division of Broadcasting of the University of Illinois. Reports directly to the Director of Development and works closely with other Development Department units, including marketing, membership, major gifts, and corporate support. Also works with television production staff and with Internet operations staff.

RESPONSIBILITIES: Has primary responsibility for management of the visual image of the WILL stations through print materials and other visual mediums. Supervises and evaluates work of art unit staff in print, broadcast, set, and web design. Provides art unit leadership; manages unit workload. Creates visual materials. Monitors unit computer system.

DESIRED QUALIFICATIONS: Baccalaureate degree in graphic design or related field required, graduate degree preferable. Minimum three years professional experience in graphic design or related field required; five years preferable. Design talent and leadership ability essential. Must have strong organizational

skills as well as project management and administration experience. Minimum one year supervisory experience; proven ability to work well in client relationship. Must be proficient in use of Macintosh, including use of PageMaker, Freehand, and PhotoShop. First-hand knowledge of printing industry, understanding of basic principles of marketing necessary. Hands-on experience with broadcast, set, and web design desirable but not required. Understanding of and commitment to the goals of public broadcasting, and compatibility with a university environment are also criteria. Candidates will be asked to present portfolios of their work to demonstrate expertise in the field of visual communication.

SALARY AND BENEFITS: Competitive salary commensurate with experience. Excellent benefits: twenty-four work days paid vacation annually, paid health insurance, paid life insurance, sick leave, disability leave, university retirement system, and other benefits.

TO APPLY: Send a complete resume and name, address, and phone number of three professional references to the address below. Receipt of application will be acknowledged. To receive full consideration, applications should be received no later than July 21, 2000. Position available August 28, 2000.

Valerie Gadbury
WILL AM-FM-TV
Campbell Hall
300 N Goodwin Avenue
Urbana IL 61801-2316
217-333-1070

AFFIRMATIVE ACTION/EQUAL OPPORTUNITY: The University of Illinois is an affirmative action/equal opportunity employer.

Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm

CREATIVE SPECIALIST
News and Information Program Producer
with Specialty in Meteorology, Half Time
Division of Broadcasting, WILL-AM-FM-TV, UIUC

THE STATIONS: WILL-AM is primarily a news and information station with a power of 5000 watts during the day at 580 kHz. The station serves listeners in most of Illinois and half of Indiana, including Chicago and Indianapolis. WILL-FM is a classical music and fine arts station serving listeners in east central Illinois and west central Indiana. The station broadcasts 24 hour a day with a power of 105,000 watts with an antenna 850 feet above ground. Both stations are licensed to the Board of Trustees of the University of Illinois.

THE LOCATION: The University of Illinois is located in Urbana-Champaign, which offers the advantages of medium-sized-city living (100,000 population) 135 miles south of Chicago, 180 miles northeast of St. Louis, and 120 miles west of Indianapolis. The University setting (34,000 students) provides a rich cultural environment, many sports and entertainment events, and a variety of recreation facilities. Local schools, libraries, shopping, and performing arts centers are excellent.

THE POSITION: This is a half-time, regular Academic-Professional position. The person in this position reports to the WILL-AM-FM Chief Meteorologist. This person will specialize in broadcast meteorology on WILL and will participate in the implementation of WILL's weather broadcasting policy. Specifically, the person will be responsible for the production and broadcast weathercasts daily on WILL Radio.

The meteorologist will utilize information resources available at WILL, including DIFAX, NOAA Weather Wire, Doppler Radar and Satellite Data, commercial broadcast news services, and access to data from the University of Illinois Department of Atmospheric Sciences computer. The meteorologist will also work closely with the station's other producers to develop strategies for effective weather presentation in the various information formats.

Finally, the person is expected to enthusiastically and effectively participate in on-air fundraising activities.

QUALIFICATIONS: A bachelor's degree is required (graduate degree preferred) with considerable academic training in the field of meteorology. Academic training or experience in the field of broadcast journalism is also desirable.

Applicants must demonstrate in an audition tape the ability to present weather information in a professional, unaffected, personable style. Applicants must also demonstrate they have an active interest in and knowledge of weather and science-related news. In addition, applicants should demonstrate forecasting skills, sensitivity to agricultural weather interests, and the ability to speak in public about weather-related topics.

Ability to promote a news and information service and to participate in on-air fundraising should be demonstrated in audition material, scripts, and information which proves effectiveness. Ability to type with accuracy is required. Ability to drive a car is desirable.

SALARY AND BENEFITS: This is a half-time academic-professional position. Generally the work will average about 20 hours a week, although since it is a salaried and not hourly position, this may vary. Salary commensurate with experience. Benefits include paid vacation and sick leave, participation in the pension system, opportunities for advanced education, and an employer contribution towards health and life insurance.

TO APPLY: Send a complete resume, a non-returnable audition tape, and the names of three professional references to the person named below. Receipt of resumes will be acknowledged. For full consideration, materials should be postmarked no later than July 5, 2000. Target starting date is July 21, 2000.

Ed Kieser
Chief Meteorologist
WILL-AM-FM-TV
Campbell Hall for Public Telecommunication
300 North Goodwin Avenue
Urbana, IL 61801-2316
(217) 333-0850

The University of Illinois is an Affirmative Action / Equal Opportunity Employer.

>I like it! Don't let them snuff out the last few places where progressive
>voices can be heard in this country!

The Pacifica Board is not trying to snuff out "progressive" voices. They're just trying to present them in a form that is more palatable to a general audience than the preaching-to-the-choir approach that most Pacifica and so-called "community" stations take. Most of the national programming changes that Pacifica has attempted to make (and many of the local programming changes) have been to put on better-produced, more appealing programming scheduled in a sensible fashion to attract listeners--something they need when surveys have shown that their primary audience is aging Jewish college professors (not an anti-Semitic remark, just the truth) and the low-income, disenfranchised audience they're supposed to be appealing to are more interested in commercial radio, thank you very much.

Now the national board of Pacifica should've known that many of their employees and volunters would've been against the status quo, but instead of trying to talk it out they played right into the hands of these people by doing things they could easily interpret as fascist. Also, it should be pointed out that most of these "strikers" have not contributed any stories to Pacifica News, if any. Finally, why should a radio station that carries Pacifica trust a group of malcontents over the executive staff who knows exactly where the money's going?

In my opinion, it's just another Pacifica interoffice squabble that should be thrashed out in private--and I don't care what some two-bit college station in Michigan affilliates or deaffailiates, just as I don't care about seeing their spam lowercase playlist every week in r.r.b--have they ever heard of CMJ and Gavin?

As an outsider to this debate (I live in UK), but with over three
decades of broadcast experience, I would like to add only this: any
organisation which inherently is greater than the sum of its parts must
pay most attention to those parts. In other words, by ignoring the
wishes of any of its component (affiliate) stations, Pacifica is storing
up trouble for itself. My observation is that some affiliates don't
like what's being done at corporate level and if the suits don't listen
and modify their actions, they are ultimately doomed.

> Which one do you have?

I have Terk and Select-a-tenna. I doubt there's a serious difference among them. They're all a passive resonant circuit, a variable capacitor and a coil. Were I starting over I'd get the cheapest, the Radio Shack. They're basically impedance matchers, much needed by most radios incidentally.

The (active) $400 Kiwa MW loop is the Cadillac; if you find you're using your cheap MW loop a lot after a few months, consider getting one. If not, don't. It's superior at nulling unwanted stations owing to its great mountings; probably you won't hear _much_ more than the cheap MW loops except for that.

The biggest bang for the buck is a cheap MW loop. The effect is quite astounding. Incidentally it only matters for daytime reception. At night, there's already a thousand stations on each frequency and they're all strong.

At $600 you can start building a phased array, which does even better.

Source record: 18917

And, before anyone even starts accusing, yes, there will be a certain number of "pro-bono" (free) applications prepared by my firm. There will also be a number of "reduced rate" applications prepared by my firm. But, we will only accept a pre-determined number of applicants for filing. Also, these applications are best prepared "without pressure" or time constraints. In short, the sooner you contact us (or, for that matter, ANY competent consulting firm), the less likely it is that something will go wrong with your application.
I have, on numerous occassions, compared filing an application without proper representation to attending your own criminal tria; without representation. You MIGHT win... But, you might also NOT win. And, in the case of LPFM, there is no appeal.
Make your own decision. Hire someone else, I don't really care. (I fully expect THAT angle of attack, as well...) My goal is to see to it that as many LPFM stations are granted as possible. There are numerous people who will be able to tell you that I've helped them for little or nothing. I will not name them. That's confidentiality. But, I will tell you this: Judging by what I saw during the first LPFM filing window, it will be a fool to attempt one of these things without proper representation. Most of the applicants are VERY WELL FINANCED RELIGIOUS GROUPS!
Get started NOW in order to insure your application is engineered in the best possible way for acceptance. Call us (or, your consultant of choice) for further
information. Just DON'T WAIT until the last minute and get left out or submit a flawed application!

WWJ daytime of late is quite lousy in the car in Oakland County (due north of Detroit). Lots of fades and nulls filled in by the wonderful Buzz of powerline QRM along Southfield and Evergreen Roads.

I find most annoying the promo tag on everything: "The Call Letters are WWJ, the Dial Position is Nine Fifty AM-- You're listening to WWJ NewsRadio 950."
Well, Duh.

I found an old cassette of a man doing an Elvis Impersonation with lots of burps, and I'm trying to figure out who it is. It's a pretty funny cut (for those of us who look at burping as funny, anyway)

I believe it was taped off of WNBC radio sometime in the mid 1980's - you can hear a bit of the announcer at the end of the cut.

Here's link for streaming audio: (You'll need Real Audio G2 or compatible Media Player)
http://users.ev1.net/~pvanhouse/AllShookUp(Burps).ram

Here's a link for downloading the Real Audio file:

2615. Latest DFW Arbitrends

Newsgroup: rec.radio.broadcasting
Date: 2000-06-26 00:00:00 UTC
From: Tom Desmond <tdesmond@sprynet.com>
Message-ID: <395824D0.9F405F93@sprynet.com>
Source record: 18921

The latest Arbitrends (March/April/May) are out for the Dallas-Fort Worth area. Anyone who is interested in seeing the complete lists should go to <http://www.allaccess.com> or to <http://www.rronline.com> ; what follows here is a summary of some of the more interesting results. Unless otherwise noted, ratings compare the current trends with the winter book.

Urban formatted KKDA(FM) (6.6 - 7.1) and CHR/pop KHKS(FM) (5.8 - 6.0) continue with their respective locks on first and second place, with little change from the last trends. Third and fourth place are now solidly held by country formatted KSCS(FM) and KPLX(FM), both of whom appear to be benefitting nicely from the demise of "Young Country"; both are up significantly from the winter book (KSCS 5.0 - 5.6, KPLX 4.6 - 5.2). Rounding out the top 5 is news/talk WBAP(AM) with a 4.5 share.

Below the top 5, Hot AC KDMX(FM) is now approaching striking distance of long time AC leader KVIL(FM). KDMX holds onto it's 3.5 share, while KVIL continues a downward drift 4.3 - 3.9. This is the closest that I've ever seen an AC competitor to KVIL in the sixteen years that I've been in Dallas.

Alternative KDGE(FM) enjoys its best ratings in ages with a 3.3 (good for 12th, and up from a 2.9). ABC's soft oldies rimshotter enjoys it's highest ratings ever, with a 3.0 share (up from a 2.7, and tied with CHR/rhythmic KRBV in 14th place). Also on the oldies front, KLUV(FM) recovers a bit with a 2.7 (up from a 2.0), landing in a tie with Christian AC KLTY in 16th place. For KLTY, this represents a drop from a 3.5 share, suggesting that maybe they will feel some ratings pain from the move to a tower 50 miles north of town after all -- it will be interesting to see if the trend continues or not.

Also on the oldies front, "Jamming oldies" KTXQ languishes with a 2.2. When this format first came on the air, my reaction was to perceive it as similar to the "ARRO" format -- a quick audience reaction, followed by an equally rapid burnout of the music from a too-narrow oldies format. I wonder how much longer it will be before the next "format du jour" ends up on this frequency?

KLNO/KDXX (the former is the old frequency & facilities of KLTY) scores a 1.9 share (up from a 1.2) with it's Spanish language programming. The only other Spanish language station to score above a 1.0 is the 14 kw class C1 rimshotter KTCY; KHCK(FM), KESS(AM), and KZMP(FM) managed to show up in the book, albeit with less than 1.0 shares.

As it prepares to disappear for good, KBFB's AC format managed a truly dismal 1.4 share -- this station will probably be history as soon as

Radio One closes on it. Lastly, I'll note that "hot talk" is not off to a hot start on the old "Young Country" KYNG, which is down to a 1.3 share (from a 2.1 in the winter). KYNG is certainly being hurt by the absence of Howard Stern, but will (of course) need more time to prove itself one way or another.

DMX blows away Music Choice. Satellite radio will be like having DMX in the car plus 50 commercial supported channels with talk, news, sports, trucker's channel, weather channel, traffic info, etc. Thanks to DMX, I stopped listning to boring New York radio 3 years ago. Got tired of all the commercial crap, and having to tolerate the same 20 songs played every day for 6 months. Now instead of listening to my CD player, I'll have a DMX type music service in the car as well. I can hardly wait. I put off buying a new car so that when I do buy I will get a factory installed unit. I look forward to testing one of the Sirius radio prototypes as soon as it comes my way. The first Sirius bird is scheduled for lift off on June 28 at 6:00 pm EST. The launch will be viewable on T5, Ku, Freq 11796, Horizontal pol.

At this point, Pacifica has the field all sewn up to itself when it comes to partisanly left-of-center daily radio news coverage via satellite through its daily one-hour "Democracy Now!" magazine show in the morning (a sort of radical "All Things Considered") and its nightly half-hour newscast--the only remnants of its attempt to establish national network programming. Free Speech Radio Network, the net that some of the striking and former Pacifica staffers/stringers have started up, only airs one half-hour a week. Some community stations that carry Pacifica are affiliated with NPR, but only on a secondary level--they tend to run the five-minute hourly newscasts and/or a few miscellaneous NPR shows, but not the flagships "Morning Edition" and "ATC"--and some of the more radical members of those stations' boards who consider NPR a "sell-out" for taking corporate underwriting and putting moderate Republicans on their air would probably love to get rid of the network, but they would probably consider AP Radio even worse, so there you go. The other alternative would be to take PRI's BBC World Service feeds, but those contain a corporate funding plug added by PRI, so the radicals would object to that.

Unless Free Speech ups its programming output to a weekday schedule, for most community stations that are still hoping for the revolution to quash Corporate Capitalist Amerika, they're going to find it that it's either Pacifica or nothing.

Source record: 18930

Tom,
A good analysis of the numbers. I think there's a couple of other points
to be made here as well.
KVIL is certainly threatend in their dominance of the AC market in DFW -
but not by KDMX. Mix's format is more in line with Merge or KHKS than KVIL.
KVIL and KMEO have very similar music formats - and KMEO is within .9
share of KVIL. That's the bigger story! It's a particularly interesting story
because KMEO's transmitter is so far north of the area.
It does appear that the spanish-language format on 94.1 is taking off.
The 1.9 for KLNO/KDXX is the highest number I've seen for any single
spanish-language station in DFW in years. But the lack of ratings from most of
it's competitors still suggests there are way way way too many spanish-language
signals in this market. Consolidation would be a good thing.
Finally, on the talk radio front - KLIF is rapidly falling off the map.
The .7 it got with it's "Big570" talk format should be a clear sign of
impending doom for that station. KYNG's fall to 1.3 means it'll draw about a 1
share when the actual book comes out in a month. It takes time to develop
ratings for a talk format - but one has to wonder what this station will do if
it doesn't acquire Howard Stern. ??

From: snarfdude@hotmail.com
Message-ID: <395a5c08.17581191@SMTP.sprint.ca>
Source record: 18931

here's a question.....

I just came upon access to some original WWONE new gold on CD discs with dick bartley..circa 1990, 1991...most of the cuts are pretty easy to identify, however, bartley often put bonus cuts on the CD's after the shows, usually 10 or 11 when he was doing it (on later Cd's, it was usually 5)

the question, is they never were listed on the cues, does anyone know a source for the titles of the bonus cuts? needle in a haystack chance I know, but what the hell, I thought i'd give it a chance. if not, it's "name that tune' for me...not that it's that hard, but some stuff i know I haven't heard before.

thanks

Besides listening only to DMX, I record it on a dedicated audio computer, dump it over to my Shortcut editor and then build 74 minute files to burn on my HHB cd burner. Got lots of CD's with non stop music for the car. FM? Who needs FM? He, He, He!

se wrote:

> KVIL hasn't been in the 3's since the early 70's!!...what is the deal
> with that radio station??

My opinion, for whatever it is worth.

When I moved to Dallas in 1984, KVIL was a big station with the ratings to match -- something over a 10 share. They ran big contests, they had big personalities, and they had a unique music mix. They irritated many people, but many others loved the station. KVIL bumper stickers were everywhere...

Now, flashforward to the year 2000, when this Infinity owned station is now "Lite Rock 103.7 KVIL", and is basically indistinguishable from any of about 300 other stations across the country that sound identical. What is there about the current incarnation of KVIL to generate the sort of passion that would generate better ratings?

I'm sure that the official corporate line will be that they are "rebuilding" the station, and that a temporary drop-off was anticipated. Whether it will rebound is anyone's guess...but my bet is that if it does so, it still won't make it back up into the "big leagues" with KHKS, KKDA, and the two country stations.

I agree that KMEO's success with a transmitter so far out of town is impressive. As for KVIL versus KDMX versus KMEO -- KVIL has evolved quite a bit musically over the past couple years, and is currently not that similar to KMEO. KMEO basically plays a lot of the music that KVIL *quit* playing with their last format. As a result, I suspect that KVIL may share as much musically with KDMX as they do with KMEO.

> It does appear that the spanish-language format on 94.1 is taking off.

It will be interesting to see how KLNO shapes up in the next few months.

> But the lack of ratings from most of
> it's competitors still suggests there are way way way too many spanish-language
> signals in this market. Consolidation would be a good thing.

Definitely. The low powered simulcast on 106.9/107.1 should go away sometime in the next year or so to allow KXGM Muenster to upgrade and serve DFW on 106.7, which will take one of the Spanish language also-rans out of the market. However, that will still leave several stations on the FM band -- 94.1 KLNO, 99.1 KHCK, 101.7 KZMP, 104.9 KTCY, 107.1 (currently 106.7 in Granbury), and 107.9 (which is being moved in to Lewisville from Corsicana and Gainesville). Assuming that 107.1 will be simulcast with 107.9, that still probably leaves one more Spanish language FM than really makes sense for this market.

> Finally, on the talk radio front - KLIF is rapidly falling off the map.
> The .7 it got with it's "Big570" talk format should be a clear sign of

They just need to shoot it and put it out of its misery. They could get better ratings with almost anything on that frequency, which is probably the third best AM signal in the Metroplex (after WBAP and KRLD) -- maybe they could move KTCK to this frequency and give the winning station a

further boost?

Probably sink like a stone. With Howard Stern, they have a good shot at
success, but without him I think it becomes a long shot.

Looking at the radio dial in DFW, I also have to wonder about the new
syndicated 70s/80s oldies format that is debuting next week that is
based in the Dallas area -- "Hero Radio". I wonder if it will have a
home on the local radio dial, and if so, on what station...

After which the guy who did it despite her solid ratings, KABC PD Drew Hayes, lost HIS job. It was the last nail in Hayes' coffin.

>Miller will continue to host the TV game show "I've Got a
>Secret" (Oxygen Network) and is looking for more work
>in television.

You have to wonder if the pulling of the syndicated show may portend a new on-air gig in LA, that would put her in a different daypart and maybe preclude her staying in nighttime syndication. When John and Ken moved to KABC mornings they also had to drop their afternoon (evening in the east) syndication deal. Sounds like she cancelled herself in order to be able to do something else...I don't have any inside infor, it just seems to be the explanation most consistent with the way things are being handled.

Sure does. "Everyone" listens to FM. "Everyone" believes MP3 is the
wave of the future. "Everyone" knows that WXXX plays lousy dance
music. "Everyone" will be on the Internet and "Everyone" knows all
other media will bite the dust.

In my part of the business, the largest shows have audiences no larger
than about 3% of the total population. At that rate saying that
"Everyone" listens to the show is a bit of a stretch.

Since "Everyone" can speak only for themselves and the small circle of
people who surround them I'd love to see someone admit that their
generalizations apply only to themselves.

I'm sure "Everyone " will agree.

With the stanadardization and cookie-cutter satellitization of local radio, its time has definitely come.

I was actually a big fan of Jacor back in the days when they were small and ran their stations with a bit of attitude (Very entertaining stuff). Those guys used to be creative and it made for good compelling radio. Now their cookie-cutter gags and satellite formats have become a little bit stale and contrived. (How many Mix stations do you need, for gods sakes?) Now that they're a big outfit, I think they've lost their way. They way their stations sound here, they may as well be run by Sears Roebuck.

The time for satellite is long past due.

Funny, but Hayes left the station with its best trend in about 4 or 5 years:
2.8 12+. Not bad, and shows the total lack of talk stations to give new
programming an opportunity.

Makes a great deal of sense. If I lived in a market where every
station had a boring 200-song playlist, I would certainly choose to
listen to the same boring 200-song playlist minus the idiotic car and
beer advertising.

(Thankfully, I live in a market with a number of excellent stations,
so I'm not stuck in such a situation.)

The National Aircheck needs 2 tapers on the east coast this weekend to videotape two premium satellite tv channels....Encore True Stories and Showtime Extreme both on Saturday and Sunday from 12 noon til Midnight. Pay is $75 per channel per day, so if you can tape both days and both channels you can make $300 for some very easy work. If you can only do one channel that is fine as well.

Now, if you have satellite or cable and don't have those channels, we will reimburse you for purchasing them. Then after a month you can dump them.

But you have to be able to tape THIS weekend.

If you are interested, we need to know immediately. Call us toll free at 888-206-9662 and ask for either Linda or Robb.

Newsgroup friends:

For the past year (well, almost a year) I've tried to redevelop our deceased friend Bill Pfeiffer's vision of his original site at Airwaves.com.

I set up a comprehensive site at AirwavesRadio.com/.net/.org to do this.

My reasoning? The Airwaves.com site hasn't been updated since Bill's passing and I just thought there needed to be the same resource available somewhere, somehow. So I did it, and at some personal expense.

The old Airwaves website remains the same; nothing new has been added since last year. Links don't work, the archives are unavailable, the FCC search doesn't work, the newsgroup is on autopilot. John Levine's assistance has been welcome and invaluable but essentially wasted.

AirwavesRadio, OTOH, has been constantly updated over the same period. Visits, though, are few and so I no longer feel inclined to support the site.

I guess that the magic for both the site and this newsgroup was the presence and management of Bill Pfeiffer. Cindy and Patrick are welcome to the tattered remains of both the website and the newsgroup.

I sincerely hope that between the two of them they can somehow manage to keep Bill's vision alive, but I doubt it. Neither have the passion for or knowledge of the industry that Bill did. Cindy works for an ISP and Patrick has had serious health issues. I wish them both well.

As soon as I can beat my feet to my ISP, AirwavesRadio goes away. Hey, I tried!

Maybe it has something to do with your sniveling and your attempt to commander the readership of the original airwaves.com and RRB. I can't speak for others, but your backhandedness, sniveling and downright immature behavior when you launched your own site caused me to intentionally stay away. I came close to dropping your posts altogether, but didn't for some reason.

>I guess that the magic for both the site and this newsgroup was the
>presence and management of Bill Pfeiffer. Cindy and Patrick are
>welcome to the tattered remains of both the website and the newsgroup.

I think they already have all they need.

Demographics. What was the line? "With statistics I can prove
Texas is smaller than Rhode Island!"? One pretty insurrmountable
number was that KABC's ratings were at an all time low, particularly in
the 26-54 range.

My suspicion is Miller is heading to KLSX very soon after her
current syndicated show goes b'bye.

2643. The News Soaps

Newsgroup: rec.radio.broadcasting
Date: 2000-06-29 00:00:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <395B4088.4E6B@mindspring.com>
Source record: 18949

Consider James Thurber's summary of soap opera vs. today's AP story on Elian.

Thurber:

In many soap operas, a permanent question is either implied or
actually posed every day by the serial narrators.
These questions are usually expressed in terms of doubt,
indecision, or inner struggle. Which is more important,
a woman's heart or a mother's duty? Could a woman be happy
with a man fifteen years older than herself? Should a mother
tell her daughter that the father of the rich man
she loves ruined the fortunes of the daughter's father?
Should a mother tell her son that his father, long believed
dead, is alive, well, and a criminal? Can a good, clean Iowa
girl find happiness as the wife of New York's most famous
matinee idol? Can a beautiful young stepmother, can a
window with two children, can a restless woman married to
a preoccupied doctor, can a mountain girl in love with a
millionaire, can a woman married to a hopeless cripple, can
a girl who married an amnesia case - can they find soap-opera
happiness and the good, soap-opera way of life? No,
they can't - not, at least, in your time and mine. The
characters in Soapland and their unsolvable perplexities will
be marking time on the air long after you and I are gone,
for we must grow old and die, whereas the people of Soapland
have a magic immunity to age, like Peter Pan and the
Katzenjammer Kids. When you and I are in Heaven with
the angels, the troubled people of Ivorytown, Rinsoville,
Anacinburg, and Crisco Corners, forever young or forever
middle-aged, will still be up to their ears in inner
struggle, soul searching, and everlasting frustration.

AP:
By PAULINE JELINEK
Associated Press Writer
WASHINGTON (AP) _ Elian Gonzalez set out for America with his
mother and went home with his dad, leaving behind legions of broken
hearts and momentous, unanswered questions.
Will the celebrated little castaway be devoured by a life of
oppression in Fidel Castro's Cuba?
Did the U.S. government correctly decide that reuniting a
6-year-old boy with his father was more important than saving him
from communism?
==

Women are into everlasting frustration.

Another theory of mine, relatedly, is that the _reason_ that no news story about an aviation disaster is ever technically correct is not that it's that complicated, but that it puts women off. AP isn't even trying to get it correct. Women are today's audience for news.

Join the club. I keep hearing about every city having a
"cookie-cutter" station just like the ones in other cities (local
listeners don't care if the same format appear in Podunk).

Satellite radio will mean they won't have to change stations in each
market to hear exactly the same thing.

I doubt Miller's cancellation had anything to do with Drew leaving
KABC. Bob Smith has this aversion to reality whenever it doesn't fit
his view of what radio should be. I'll bet Drew could come in to the
educational station Bob works for and bring their numbers to
reportable levels.

>about an aviation disaster is ever technically correct is not that it's
>that complicated, but that it puts women off. AP isn't even trying to
>get it correct. Women are today's audience for news.

The fact that the news is often non-technical is because our schools
of journalism are graduating too many people who couldn't figure out
which end of a screwdriver to use, much less understand a new
scientific discovery.

I don't see how women have anything to do with this. The problem is
as much yours and mine for having such a low opinion of news
journalism. These days, we either give up or we look to other sources
besides the evening news. If we voted with our market share, (and
many young folks are doing just that by ignoring the evening news)
then one would expect that things might change. But it doesn't.
That's because the management of most news organizations are scared to
try anything new.

Newspapers all have an axe to grind. Facts merely get in the way.
And broadcast journalists, even if they are reasonably smart, are
asked to dumb themselves down to a ridiculously low common
denominator. If a drooling idiot with the IQ of a turnip can't
understand the story, then they must be doing something wrong...

The story of Elian Gonzales should never have been newsworthy at all.
It was irrelevant. It was pointless. The endless discussions and
protests have not amounted to a single insight on how INS could have
done differently. No self respecting Journalist should have covered
it.

>--

Actually, the reason they are never technically correct is that they
are written by people who know nothing technical about aviation, and
don't care to learn. When the AP or any other news organization
assigns an aviation specialist to a story, the technical details are
almost always correct. Such specialists are few, however.

Whether or not they are technically correct, the injection of
emotionalism into stories about air disasters, or anything else _is_
a function of marketing to women, a phenomenon so clearly observable
in local television that it's even beginning to turn off women. TV
consultants are constantly coming up with new ways to manipulate the
emotions through writing gimmicks and performance style.
Unfortunately, a lot of radio news folks, especially those starting
out, seem to think imitating the TV folks is the way to go--perhaps
because TV is where they really want to be anyway.

But as TV news plays to emotions and becomes increasingly
manipulative, the number of viewers steadily drops. And the more the
numbers drop, the more the consultants push emotionalism and
manipulative gimmicks. Television news has become a parody of
itself. There's a lesson in that, for those radio folks who care to
learn it.

2656. Illinois Sets Pi to 22/7, Gas Tax

Newsgroup: rec.radio.broadcasting
Date: 2000-06-29 00:00:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <395BF2CC.1266@mindspring.com>
Source record: 18962

AP reports:
SPRINGFIELD, Ill. (AP) _ Driven by election-year outrage over some of the highest gasoline prices in the nation, Illinois on Thursday became the second state to suspend its sales tax on gas. Legislators, voting in a special session, urged gas stations to pass along the 5 percent tax savings on the gasoline they sell. If they do, drivers could see prices fall by 7 or 8 cents a gallon in a state where prices in some areas have soared well above $2 per gallon.
The legislation, which was quickly signed by Gov. George Ryan, suspends the tax for six months, starting Saturday, and requires each gas pump to display a sign saying the tax has been lowered and that prices should reflect the change.
``This has got to be passed on to the public, and we're going to demand that it is,'' state Sen. Frank Watson said. ``That's a message to the retailers and the oil industry. I want that to be understood.''
===
The problem is, about passing the savings along, that if the price is high because no more gasoline is available in Illinois, so it stabilizes wherever motorists give up driving enough to match the supply available, THE PRICE CANNOT FALL no matter how hard you try.

Instead, a windfall profit hits the oil company, against its own PR wishes.

Either the price remains high or you have lines. Something has to ration gas, price or inconvenience.

Can nobody ask this elementary economic question of politicians? It's the question to ask. Colleges still teach it. Perhaps journalism schools do not.

Hi Folks,

We are WMBR Radio in Cambridge, Massachusetts and we are selling our Wheatstone SP-6 board. Purchased in 1988, the board is in perfect working order. The SP-6 features 12 Microphone faders and 6 Stereo faders each with A/B selectable inputs. The board has a 32 module frame a meter bridge and 8 VU meters and the SP-6 comes complete with all manuals, the stand and a power supply and extra modules.

We require that the buyer pay for shipping costs with the shipping service of their choice or you can come to pick it up yourselves. All reasonable offers will be considered.

Please e-mail Christopher Hardgrove at cjhardgr@mit.edu

To view a current photo of the board go to:

In article <395BF2CC.1266@mindspring.com>, Ron Hardin <rhhardin@mindspring.com>
writes:

>The problem is, about passing the savings along, that if the price is
>high because no more gasoline is available in Illinois, so it stabilizes
>wherever motorists give up driving enough to match the supply available,
>THE PRICE CANNOT FALL no matter how hard you try.

If there is, in fact, no gas available to Illlinois, no amount of money will
create it. The fact that gas appears when the price goes up indicates that it
is, in fact, available at a lower price, and being withheld.

The price of gas fell 27 cents a gallon overnight in Milwaukee, according to
ABC, when the FTC started its investigation of the oil companies The wholesale
price of gas has fallen 43 cents per gallon since June 10. Needless to say,
those savings have not been passed on.

Back in the 1970's, I can remember the satellite pictures of tankers dropping
anchor off the Texas coast, waiting for the price of gas to go up, before they
would dock. It seemed odd that the tankers took 8-10 weeks to arrive in the
Gulf Coast when the price of gasoline was going up, but only 5 weeks when it
was going down.

Replying to this ridiculous address because he/she is afraid of personal contact (you have to do a little editing to get it right)...

"CA was in NJ" <REPLY-TO_cainnj-at-mailandnews.com_____________@skywave.yi.org> wrote:

He/she wrote this:

-- Maybe it has something to do with your sniveling and your attempt to commander the readership of the original airwaves.com and RRB. I can't speak for others, but your backhandedness, sniveling and downright immature behavior when you launched your own site caused me to intentionally stay away. I came close to dropping your posts altogether, but didn't for some reason. --

mike@pickeringonline.com wrote this:

Oh, yeah. So very impressed with both you and Rich Wood. But I'm glad that I managed to get next to the all-seeing, all-knowing masters of the newsgroups. I always wanted to hear from someone who could edit a newsgroup. Or who had the balls to. God forbid anyone should launch a website that dares to be close to the heart of a newsgroup. Bet this never makes it to the group.

mike@pickeringonline.com wrote this:

-- I guess that the magic for both the site and this newsgroup was the presence and management of Bill Pfeiffer. Cindy and Patrick are welcome to the tattered remains of both the website and the newsgroup.--

He/she wrote this:

-- I think they already have all they need.--

mike@pickeringonline.com wrote this:

Yup, they certainly do. Patrick licks John Levine's leg and neither he nor Cindy have any knowledge of the industry.

He/she wrote this:

-- IMHO, your mistake was to try to divide the readership. You lost.--

mike@pickeringonline.com wrote this:

I wasn't aware that there was a contest. I just made an attempt to continue Bill's work. Sad that you cannot move into the next phase.

He/she wrote this:

The news item still not heard anywhere is ``Even though the supply is not physically restricted, the price has soared ...''

It's not heard because nobody has the sense to check this elementary economic fact that is the first prediction of economics 101.

Instead, we get Oliver Stone writing the news at ABC.

From: Tim King <tim_king@metronetworks.com>
Message-ID: <395CBB77.E702C9C8@metronetworks.com>
Source record: 18973

Actually, Rich with 48 separate audio channels available subscribers are going to have more choices than they would in even the largest markets. In addition those choices come without the insanity of 24 units of commericals an hour.

The concept of "pay" radio is as difficult for people in the radio business today as it was for our TV brethren when cable came into existence. But just like them, those who choose to ignore the potential of Sirius/XM do so at their own peril.

2668. Future of Spanish Radio

Newsgroup: rec.radio.broadcasting
Date: 2000-06-30 00:00:00 UTC
From: zebokuk@aol.com
Message-ID: <20000630125631.01160.00000492@ng-fc1.aol.com>
Source record: 18974

Eventually spanish radio will take over AM radio, as talk shows and sports formats wil start to decline.

2669. No Repeats!

Newsgroup: rec.radio.broadcasting
Date: 2000-06-30 00:00:00 UTC
From: dsembr01@ox.slug.louisville.edu
Message-ID: <slrn8lpult.t7p.dsembr01@ox.slug.louisville.edu>
Source record: 18975

CD101 (WWCD/Columbus, http://www.cd101.com/, listen online) is doing
their ``No Repeat Weekend'', where for the next nine and a half days,
they will not repeat a song.

That got me thinking about the question: is this a record? What's the
longest time, and/or highest number of songs, a radio station has
played without repeating a song?

Countdowns do qualify, by the way. I'd have to say that the longest
no-repeat events I know of are either CD101's Top 2000 countdown (I
found out about CD101 two months thereafter) or this thing, which I
estimate at 2,250 songs assuming they play 10 songs per hour.

A public AAA station, WFPK right here in Louisville
(http://www.wfpk.org/, can't listen online), deserves honorable
mention for their Top 1000 countdown, where they played at least one
song from the top 1000 albums submitted by listeners, including the
top 20 albums in their entirety. However that wansn't a 24-hour-a-day
event so it may not count; they still broadcasted regular programming
(Echoes, etc.) in the wee hours (0100-0600). Now *that* was fun to
listen to! They played AC/DC next to Ella Fitzgerald, Iron Maiden
next to Frank Sinatra next to Cheech n' Chong, and the Sex Pistols
next to Hank Williams next to Jimi Hendrix next to Nirvana, among
other . . . umm . . . neat segues. And it was nice how they managed
to time it at exactly 10 songs per hour. :)

As an aside, I heard a CD101 DJ mention something about a regular
policy of not repeating a song in less than 3 hours. Do any other
stations you know of have something like this?

I realize that I am about to date myself with this but, in the '70s, we would usually have about 20 current hits and several other catagories of music (remember: "creative freedom", actual "requests", and the ability to actually choose - within reason - what we played). The currents would go through an entire rotation every three hours (for some reason, people listened longer in those years) so as to avoid "burn-out" and the other catagories would rotate over LONGER periods of time up to the "oldies" catagory which was to rotate completely through at a "variable" rate... I'll explain that "oldies" rotation in this way: A particular cut COULD be repeated after 3 days IF it was a request called in by a listener. Otherwise, the "oldies" rotation was anywhere netween 5 and 7 days... now, basing this on "modern research", isn't it amazing that the listening audience would actually tolerate this! I'm really shocked, now that you've caused me to go back and think about it... I bet that, if this were done today, it'd be a TOTAL flop! Anyone care to chime in?

Now that is a contrarian opinion.

Spanish language radio is moving intensely to FM, as it has been seen that most listeners prefer music programming on FM. What a surprise.

In a representative developed market, Los Angeles, the AM Spanish language stations have about 3.5 share points combined on the average, while the FM stations have over 20 share points. The market has 4 AM formats on 5 signals in Spanish and FM has 8 formats on 10 frequencies.

In Phoenix, the AMs barely show if at all, while there are about 6 shares on FM. Fresno: about 13 shares on FM vs. about 3.5 shares on AM. And the story goes on.

The only Spanish language AM stations that are generally billing significantly are ones like WADO-NY, WAQI-Miami, WIND-Chicago, KLAT-Houston, KESS-Dallas, KIQI-San Francisco and KTNQ-Los Angeles. All are Spanish language news/talk.

Oh, did you notice: look at any lager market and its billing leader or top-5 biller. It is almost always an AM talk or sports station, not an FM. WCCO. WSB. KMOX. KOA. WBZ. WQAM. WFAN. KFI. KGO. KIRO. KEX. WGN. WJR. KDKA. WWL. WLW. WTVN. WIBC. WTMJ. WHO. WDBO. WRVA. KYW. WGY. KMJ. KOGO. KFBK. KSL. And so it goes. Those stations are certainly NOT planning on abandoning their programming, selling to an Hispanic operator or playing zither music. Your contention has neither basis in fact nor in any developing trend.

The only place AMs work for music is where either there are too few Hispanics to support the cost of an FM or where the format is targeted at an older demo (like standards in English). And news/talk tends only to work in the top 15 to 20 Hispanic markets.

I remember back in the early 70s a local Top 40 AM had a policy where an oldie could only be played once a week, and only once PER MONTH per daypart. (There were 4 or 5 oldies per hour, everything else was current)
The other Top 40 AM played considerably more oldies, but had a bigger playlist so they probably didn't repeat much more than that.

Of course, stations then tended to play a bigger variety of music, since in the Cedar Rapids, IA market at least, you had a very outdated MOR, a country station, beautiful music, and 2 top 40s (both AM) That was it... no AC, no AOR, no oldies, no classic rock.

Actually, I've known two or three of AM stations (In LA/Southern
California) that
changed from Spanish to talk/sports.

Hispanics like their music on FM too, it seems...

Of course, the original meaning of Top 40 as defined on the original
converts to the format was 40 records played over and over. No oldies, just
an occasional pick hit and the 40 tunes.

No one complained about repetition because these stations played the
consensus hits and only the hits.

>educational station Bob works for and bring their numbers to
>reportable levels.

We're doing fine and growing, Rich, just had our best cume and AQH in 10 years. I think you're well aware of that.

Can't figure out why you're so concerned with me anyway, Rich...I sure don't go out of my way to attack and try to demean YOU personally, and why you pay any attention to me at all if you really think I'm that insignificant is beyond me. Obviously you don't.

Chill out, brother...a man in your position OUGHT to be too big and too busy to go personally attacking everyone he disagrees with. It doesn't enhance your credibility, man...

Here in Austin last week weekend I came across KNLE 88.1 running a jingle spot for a local car dealership and just down the dial KAZI 88.7 was running a spot for a concert coming to the local concert venue.

Did I miss something or are non-commercial stations allowed to run spots these days? I thought they could briefly thank sponsors for making it possible to present their programs commercial free?

No, you didn't miss anything. Commercials (announcements made on behalf of a for-profit entity, which contain a mention of price and a "call to action") are still prohibited by Section 399b of the Communications Act. Sounds like those two stations were violating the law.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - Over 25 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for over 25 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their

own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor RealAudio broadcast!

From 'mike@pickeringonline.com':

>Oh, yeah. So very impressed with both you and Rich Wood.

Who are you?

I know CAinNJ, and I know Rich Wood. Both of them know far more about radio than I do, and I'm glad they post here.

I also knew Bill, although not personally.

Those people, along with many others, contribute a lot to these discussions.

You, on the other hand, have not. I've only seen a few posts from you, and they are all like the one to which I am responding.

>But I'm glad
>that I managed to get next to the all-seeing, all-knowing masters of
>the newsgroups. I always wanted to hear from someone who could edit a
>newsgroup. Or who had the balls to. God forbid anyone should launch a
>website that dares to be close to the heart of a newsgroup. Bet this
>never makes it to the group.

I'll tell you what. I've been to your website, and it seems to be a St. Louis-only site. I don't have a problem with that, but that's not what Airwaves.com is supposed to be. If you're going to maintain your own site, fine. If you're going to maintain Airwaves.com, fine. If not, why not give the site to me - I'll maintain it myself. (You did say you're getting ready to take it down, right?)

I'm willing to bet you will refuse, in which case I respectfully suggest that you take your attitude and shove it up your ass sideways. (Actually, I'd like to respectfully suggest that anyhow.)

Oh yeah... Maybe you should try participating in the newsgroup sometime.

>Patrick licks John Levine's leg

Wow. That's intelligent. Care to comment on why you didn't update airwaves.com? Then, would you mind turning over the site to someone who will?

BTW. The return address on this post is a spamtrap. However there is a Reply-To header too, so if you reply, and your newsreader is not broken, you should be able to reply to my real address (sjsobol@NorthShoreTechnologies.net) with no problem.

that it is, in fact, available at a lower price, and being withheld."

Horse poop. The fact that you aren't seeing long gas lines simply indicates
that demand *at current prices* is not exceeding supply. The only
withholding is being done by OPEC member countries.

Many ignore this rule. KNON is Dallas has been fined and still crosses
the line. They do it day after day.

Announcements on non com FM CAN be almost like commercials and the FCC
and congress have have been generous....which some stations cant seem
to be satisfied with.

I write and produce many "enhanced Underwriting" spots and have yet to
get a non com in trouble. (crossed fingers) The rules are pretty easy
to understand and MAY be a lot more than briefly thanking a sponsor.

Now IF the sponsor is a non profit organization.... hospital, Opera,
Symphony, Charity, the rules DON'T apply and you may run whatever you
like. Congress has exempted them.

One station here runs a lot of OLD commercials from the 30s and 40s.
These are OK because they do not pay to have them run so by the FCCs own
definition, they are NOT commercials!

FM

Bob Smith slams Drew Hayes' excellent improvement of KABC's ratings and than claims to Rich Wood that the also-ran station he (Bob) works for

> "... just had our best cume and AQH in 10 years."

So your station has cracked a two share, Bob. I can remember when you used to mix aqh and cume numbers to make it seem that your aqh numbers were higher than they really were. I can also remember your telling us how your commercial competitor was collapsing. Funny, their numbers are still several times larger than yours.

And to Rich Wood, Bob offers the devastating analysis

> "It doesn't enhance your credibility, man..."

Rich, in summary, has plenty of credibility with me and likely with plenty of other readers of this newsgroup. I suspect that his tweaking your beak is because he thinks you deserve it.

I have noticed a number of non-coms running commercials as underwriting. KETR in Commerce is pretty up front about it --- However, I think the way the rules are written allows this as long as two things happen: 1. the announcement does not interrupt the program for the purpose of running the announcement. 2. The spot does not go beyond being informational - in other words, they can't use the terms "best prices anywhere!" or something like that.. they can say they're at 1201 east main.. they offer x, y, and z at their store.. etc..

Personally, I don't see anything wrong with it. I think if they can stick these spots before and after each show, or maybe at the end of each hour, there's nothing terribly obtrusive about it. These stations cannot make it on listener memberships alone.

From Fred Cantu...

>> Did I miss something or are non-commercial stations allowed to run spots these
days?<<

You haven't missed anything. The FCC has loosened up a bit, but blatant commercials are still no-no's.

I don't know the exact rules, since I just read the scripts and don't have to write them, but my understanding is an underwriting announcement can come close to an out and out commercial, but it can't have a specific call to action (for example, it can't say, "Stop in" or "Call today") and it can't have a music bed (I have no idea why). Anything can be done with PSA's.

I think non-comms that run spots are forgetting why the FCC reserved this part of the band for non commercial use. It's supposed to keep advertiser-driven programming from swallowing up the whole dial.

Besides-- if the donor gets a spot for their donation to the station-- it's no longer a charitable contribution since they got something of value in return.

You have it right Mark. I work at a non-comm religious FM (His Radio-WLFJ
in Greenville, South Carolina). You can give information about a business or
organization, but you can't say they're the "best in town" or do any call to
action
as you described. Most of what we do are church psas about what's happening
at
their church, but we do get an occasional request to announce concerts in
the
area and the like. The churches come in and do a :30 spot free of charge.
Any
financial support given to us is from the members who appreciate this
service.
They are not allowed to give any prices (for the concert promos), so we just
allow them to record the facts and give a number for more information.
An FCC inspector was just by within the past year checking EAS records for
the
station and said what we're doing on the psas is ok within the rules.

2689. List of the rec.radio newsgroups

Newsgroup: rec.radio.broadcasting
Date: 2000-07-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8joe38$5n9$1@news.hawaii.edu>
Source record: 18995
Cross-posted to: rec.radio.amateur.space,rec.radio.broadcasting,rec.radio.cb

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O

>Bob Smith slams Drew Hayes' excellent improvement of KABC's
>ratings

Do you really want to argue that the station is in better shape now that it was when he took over? Wouldn't he still be there if it were? We all know the recent ratings and revenue history of KABC...

And one question about the tone of your post. Jim, who are you? What is YOUR beef with someone you have never met, who neither knows you nor has had any dealings with you?

Are you the guy who had something to do with the WLS front office years ago when it was still a music station? I know of no one else in the business by that name---and if you are that man, what is YOUR grievance with me, that motivates you to a bitter personal attack from a distance of hundreds of miles, apparently motivated only by disagreement with a point made? That tactic enhances no one's credibility, it only diminishes whoever uses it, making him look like someone who indulges in the online equivalent of road rage.

Bob Smith, afternoons WXXI-AM 1370, Rochester NY

FM Benton <mrmusic@unforgettable.com> wrote:

"One station here runs a lot of OLD commercials from the 30s and 40s. These are OK because they do not pay to have them run so by the FCCs own definition, they are NOT commercials!"

That definition also allows broadcast of cigarette commercials for news and documentary purposes, and in the 1930s and 1940s it allowed FM stations with experimental licenses to simulcast sponsored AM programming, as well as experimental TV stations being allowed to let ad agencies do commercials at no charge to learn how to use TV. And, last but not least, it allows telecasts of sporting events where cigarette advertising at the venue might inadvertently be seen on camera -- though there are some restrictions on that when the venue is in the U.S.

The end doesn't always justify the means. As another poster mentioned, there is a reason for reserving part of the FM band for non-commercial operation -- though my gut feeling is that the intent was more to control who could operate the stations in that segment (i.e. non-profit educational organizations rather than for-profit businesses). "Enhanced underwriting" might be justifiable on the ground that the stations are still non-profit -- but then what happens when the pressure of attracting underwriters drives the programming policy toward something indistinguishable from a commercial station?

Bob Carpenter <rcarpen@erols.com> wrote:

"With so many US stations carrying the same services off the birds, I'd think we should see the RDS AF feature used here."

One big problem -- what if a given service was being carried by, for example, an Infinity-owned station in one city and a Clear Channel-owned station in another? Handing off in that manner would hand that listener over to the competition (assuming Infinity owned stations in the same market as the Clear Channel station). Far better in that regard to take one's chances that the listener will happen to find another station owned by the same company when the signal is lost.

That of course would be WCBN in Ann Arbor MI, for whom I worked briefly in the early 90s. They forced me out after it was obvious I would not accept their "We're-here-to-overthrow-fascist-Amerika-so-wipe-that-smile-off-your-face" dogma. Now they're too radical even for Pacifistica? Sheesh...

> the recent ratings and revenue history of KABC...

KABC has just started what appears to be a significant uptrend. Like management often does, they don't give time for plans to mature before they pull the trigger. Obviously KABC is a better station now than it was a year or so ago. Keep in mind that KABC lost the Dodgers a while back, and any PD had to deal with the loss of the sports image and the huge pressure frothe loss of sports revenue.

Recent ratings are suporior; revenue is mostly off vs. historic figures due to the sports issue, not regular programming.

Also consider that there are many more talk options in LA than there were 5 years ago. KRLA is a talker, and while it has trouble getting a 1 share, that listenership came form somewhere. KLSX is now a top-5 biller with its FM talk format and a major obstacle for an AM that wants to get under-55 demos. Xtra Sports takes a portion, albeit tiny, of the spoken workd listenership, as does a somewhat improved KIEV. And 5 years ago there were no Spanish language talkers; now there are 3 appealing to the substantial bilingual market in LA tha formerly could only listen to talk in English.

While KABC is still no big deal, it certainly seems to have improved and is a lot more entertaining and less stilted and politically polarized than it used to be. Give the station and Drew some credit. Unfortunately, management could not wait and did a "ready-fire-aim" trick on the station. Too bad.

Rock-it Radio listeners club - http://www.rockitradio.net

Hello Rock-it Listeners,

Lane Quigley takes us on another stroll down MEMORY LANE, this time featuring 90 minutes of female solo and group recordings, mostly from the early and mid-sixties, with volume four of the GIRL GROUP SPECTACULAR.

On this show, you will hear the original version of "Johnny Angel" by Laurie Loman (remarkably better than the hit version by Shelley Fabares), early recordings from future superstars Carole King, The Supremes and Dolly Parton, plus a cute story that Brenda Holloway tells about a young Diana Ross.....all
this and more on THE MEMORY LANE SHOW GIRL GROUP SPECTACULAR #4.

Here is the playlist:

MEMORY LANE SHOW - GIRL GROUP SPECTACULAR #4

1. Who's Been Sleepin' In My Bed - Linda Scott - 1964
2. Unbelievable Guy - Diane Renay - 1964
3. 442 Glenwood Avenue - The Pixies Three - 1963
4. Why Do Lovers Break Each Others Hearts - Bob B. Soxx & The Blue Jeans - 1963
5. Alone - The Shepherd Sisters - 1957
6. Don't Mention My Name - The Shepherd Sisters - 1963
7. A Breath Taking Guy - The Supremes - 1963
8. Stolen Hours - Patrice Holloway - 1966
9. Under the Stars - Carole King - c.1962
10. Everybody Go Home - Eydie Gorme - 1963
11. We Belong Together - Honey Love & The Love Notes - 1965
12. Baby Be Mine - The Jelly Beans - 1964
13. What Is Love? - The Shirelles - 1967
14. Big Town Boy - Shirley Mathews - 1964
15. Gonna Make Him My Baby - April Young - 1963
16. Just Like In The Movies - Jackie DeShannon - c.1962
17. Johnny Angel - Laurie Loman - 1961
18. Come On And See Me - Tammi Terrell - 1966
19. Take All The Kisses - Ann Margaret - 1963
20. Growing Up Is Hard To Do - Ginger & The Snaps - c.1965
21. The One You Can't Have - The Honeys - 1964
22. Who Do You Love - The Sapphires - 1964
23. Hello Heartache Goodbye Love - Little Peggy March - 1963
24. Don't Drop Out - Dolly Parton - 1966
25. Gee Baby Gee - The Sisters - 1964

26. I Ain't Comin' Back - The Orlons - 1965
27. Keep On Dancin' - The Ronettes - 1964
28. Don't Ever Leave Me - Connie Francis - 1964
29. Now That You're Gone - Connie Stevens - 1965

To Tune into Rock-it Radio show #181 Part IV of the Girl Group Sounds just go to our archive website at http://www.palmsradio.com/rockittext.htm and click to show #181. Or you can just go to our main website at http://www.rockitradio.net
and scroll and click to where it says towards the top -- Go to our archives page and you will find show #181 listed there.
~~~~~~

North to Alaska

The First 15 days of July might be a little slow for the Rock-it it appears everyone at studio A in Ventura, Ca. where programming originates from will be in Alaska. So, when everyone gets back there will be more new programming we promise! So, hang in there everyone and check out the Girl Group Sounds and we will have more rockin rarities when everyone returns.
~~~~~~

Rockabilly and Doo Wop tied

In the latest results of the Rock-it poll of what listeners prefer to listen to on the Rock-it. It is currently tied with 356 votes in here are the results....

50's Rockabilly 136 votes 38%
50's Doo Wop 136 votes 38%
Rockabilly today 84 votes 24%

If you haven't voted yet and would like to take place in this poll, all you have to do is go to our main page at http://www.rockitradio.net and scroll down the links section and click to where it asks you if you prefer Rockabilly or Doo Wop on the
Rock-it and vote from there.

~~~~~~

Johnny Rivers fan club shows more kindness
to the Rock-it

In the last newsletter it was reported that the Johnny Rivers fan club has asked Rock-it Radio for there help in getting Mr. Rivers
in the Rock and Roll Hall of Fame. Remember, you can also vote in his petition to do so at http://www.johnnyrivers.com
Also, Bennie Dingo has received word that Mr. Rivers has offered Rock-it Radio an exclusive interview coming soon, and heard on the Rock-it.

~~~~~~

We will have alot more later this month when everyone returns....
including hopefully more shows from Bennie Dingo, Lane Quigley,
Harry Hepcat and Al "Cool Daddy" Smith from the Great White North!
There will also be updates in the Rock-it Radio bio page of Al "Cool
Daddy" Smith, and a new section of "Out Boppin' with Missy" page on
Viva Las Vegas 2000. All later this month... on the Rock-it!
http://www.rockitradio.net

And don't forget if you want to join the Rock-it Radio listeners club you
are more
then welcome to join ... just go to our website at
http://www.rockitradio.net and
towards the top of the page enter your e mail address and click the red
listbot button
and follow the instructions and you will be in! Including some great
upcoming give aways
of Rock-it T shirts, CD's and rockin' videos all on Rock-it Radio!!!

Perhaps it IS time to petition the FCC for a rulemaking concerning the repeal of "The Consolidation and Rape Act of 1996". Anyone having any evidence of the damages caused (both personally and to the public - ie: loss of local programming services, cutbacks in public service programming, cutbacks in public affairs programming, etc.) please feel free to e-mail it to me for use in a formal petition. (I'll go out a purchase a bukllet proof vest, now...)

You're right - however, there's got to be some incentive to donate to these stations. That's why there are so many public television and radio totebags around. :)

Local LPFM Applications: What They Mean to You

THE CGC COMMUNICATOR http://www.bext.com/cgc99/2000/cgc398.htm CGC #398 for Thursday, June 22, 2000 with
Robert F. Gonsett, W6VR, Editor, posted an exhaustive list of Low Power FM (LPFM) applications announced by the FCC
two weeks ago.

Just the proposed stations in the local area of Los Bernadiego (the L.A. - San Bernardino - San Diego triangle and vicinity) are
included, with 'mystery communities' thrown in (such as El Zona De Los Misterio?).

He sorted the long list by frequency. You may view the original FCC Public Notice (with items not sorted by frequency) at:
http://www.fcc.gov/Bureaus/Mass_Media/Public_Notices/Brdcst_Applications/ap000621.txt

The FCC has received 722 non-commercial low power FM (LPFM) radio station applications from churches, religious
organizations, community groups, educational organizations, and state and local governments in the first of five 100-watt filing
windows.

Some of the 100-watt stations may cause adjacent or co-channel interference with your local or distant radio stations that you
are accustomed to listen to, while some may have minimal alternate-channel interference by comparison.

Dave Definitions:

Alternate channel - channels spaced 0.4 MHz apart such as 101.1 and 101.5
Adjacent channel - channels spaced 0.2 MHz apart such as 92.3 and 92.5
Co-channel - channels sharing the same frequency such as 90.7 in Los Angeles and Tijuana

For San Diegans, the applicants on 89.1 won't cause much if any adjacent channel interference with KPBS-FM at 89.5 FM or
Tijuana's 88.7 FM down South.

For El Centro radio listeners, an applicant at 93.7 could cause interference with co-channel KCLB from Palm Springs 100
miles to the North. There are two low-power applicants for 95.3 in El Centro and one for 95.5 in nearby Calexico. A station at
95.1 in Yuma could be affected adjacent-channel wise.

For San Bernadino, the 94.3 LPFM station sits between 93.9 KZLA and 94.7 KTWV.

For South Riverside, two LPFM stations at 96.9 in Hemet and Temecula could interfere with reception for KLSX 97.1.

In Palm Springs, four LPFM applicants for 97.1 may interfere with The Point out of Las Vegas, but KLSX seems to be blocked by the hills for the most part.

In Escondido, a LPFM applicant at 99.3 could cause co-channel interference with nearby Hot Country from Tijuana.

In Vista, three applicants for the 99.5 frequency could also affect reception of 99.3 and 99.7 from Tijuana.

In Los Angeles, a LPFMer on 100.9 and two at 101.3 will surely interfere with K-Earth 101.1. A Lake-Forest LPFM on 101.1 will cause co-channel interference with it as well.

Ten LPFM applicants fighting for 101.5 in the Los Angeles, Orange, Ventura, and Riverside areas will cause fans of KGB 101.5 to miss out on their dinosaur rock mix.

A LPFM on 101.7 in Mission Viejo will interfere with KGB and K-Earth adjacently there.

An LPFM station at 103.7 in Yucca Valley will interfere with either of the 103.9 low power radio stations in San Bernadino and Coachella.

Two stations on 103.9 from Irvine and Corona will interfere with Inglewood and San Bernadino's 103.9 stations, as well as with soft pop KOST 103.5.

Two LPFM stations on 104.1 in Hemet and in San Clemente can cause adjacent-channel interference with KBIG 104.3's distant signal.

Two staitons on 104.3 in Fallbrook and Oceanside will cause co-channel interference with KBIG and adjacent-channel interferend with Tijuana's Radio Latino at 104.5.

Nine LPFM applicants fighting for the 104.7 frequency in Los Angeles and Orange will cause co-channel interference with Oxnard's 104.7 100 miles to the North, as well as a few pirate radio station operators using the frequency.

Four LPFM applicants on 105.3 in Coachella might cause interference with a religious translator at 105.5.

Nine LPFM applicants on 105.5 in San Bernadino won't cause any noticable interference.

There are an astounding 22 LPFM applicants in San Diego county ranging from the city itself to National City to Chula Vista to La Jolla to Oceanside to Escondido to Alpine to Lakeside are fighting for the frequency of 105.9. Although 105.9's closest San Diego stations are located at 105.3 and 106.5, they will definitely cause

co-channel interference with KPWR's Power 106 at
105.9, making fans of hip-hop angry.

Two applicants at 107.5 in San Diego will cause adjacent-channel interference
with the two Tijuana frequencies of 107.3 and
107.7.

So much for Low Power FM's. Be aware of what interference they can cause to
your favorite radio stations and contact the
FCC to file a petition to deny any applicant you see for reasons of possible
local channel interference and possibly distant
co-channel interference as well.

Some LPFM applicant numbers to crunch on:

More parties (22) are fighting over the use of 105.9 MHz in San Diego and
vicinity than there are LPFM applicants in the
entire state of Utah (19).

For more fancy figures:

Don't confuse applications with grants. Here in the Washington, DC,
area, a large number of the LPFM applications were for facilities that
do not meet the FCC's technical requirements. They have absolutely no
chance of being granted. One was cochannel about 15 miles from a full
power class B!! Others were almost as naive.

2706. RE: I GIVE UP

Newsgroup: rec.radio.broadcasting
Date: 2000-07-04 00:00:00 UTC
From: Cindy <writeit@execpc.com>
Message-ID: <396235FA.E97146C0@execpc.com>
Source record: 18862

> For the past year (well, almost a year) I've tried to redevelop our
> deceased friend Bill Pfeiffer's vision of his original site at
> Airwaves.com.

As you perceived it.

> I set up a comprehensive site at AirwavesRadio.com/.net/.org to do this.

True.

> My reasoning? The Airwaves.com site hasn't been updated since Bill's
> passing and I just thought there needed to be the same resource
> available somewhere, somehow. So I did it, and at some personal
> expense.

Perhaps at the time that you set up your sites. You had
other options that you chose not to take. You were fully
invited to participate in Airwaves.com, but you opted to
take a different path because things were not going to done
exactly your way. It is true that Airwaves.com is behind
now because of Pat's health. It is not as behind as you
state it to be or there would be no memorial service on it
nor other more-up-to-date items.

> The old Airwaves website remains the same; nothing new has been added
> since last year. Links don't work, the archives are unavailable, the
> FCC search doesn't work, the newsgroup is on autopilot. John Levine's
> assistance has been welcome and invaluable but essentially wasted.

I disagree. John's assistance has not been wasted.

> AirwavesRadio, OTOH, has been constantly updated over the same period.
> Visits, though, are few and so I no longer feel inclined to support the
> site.

OK

> I guess that the magic for both the site and this newsgroup was the
> presence and management of Bill Pfeiffer. Cindy and Patrick are
> welcome to the tattered remains of both the website and the newsgroup.

Thanks for the welcome. I think we have. For the record,
you were invited, Mike, to be directly affiliated with the
vision Bill had, and to which I have direct knowledge. You
chose to take another route. At that time, I chose not to
participate and wished you well. I continue to wish you
well and thank you for your input after Bill died.
Unfortunately, your ideas clashed with those that Bill had.

It appears much of the Airwaves.com website and group are functioning right along, in exactly the spirit that Bill had intended. Bill hated flame wars, but in certain cases, they were and still might be necessary...

> I sincerely hope that between the two of them they can somehow manage
> to keep Bill's vision alive, but I doubt it. Neither have the passion
> for or knowledge of the industry that Bill did. Cindy works for an ISP
> and Patrick has had serious health issues. I wish them both well.

Again, FTR, I do not work for an ISP. Nothing against John Levine and iecc as he has been a tremendous help and asset to keeping Airwaves function, but don't you think maybe I would have had Airwaves.com hosted at my own ISP if I worked for one. I work for a Catholic church full time, and before that worked for a newspaper. Through all of this, I have learned about web creation and design from Bill, mostly, and from others, secondarily. I also have created a company called Write It Right that does any form of pen to print writing, including resumes, biographies, etc. and web sites. (I chose to let Pat do the web work on Airwaves.com.) This "business" was under the encouragement of Bill, so we could work hand-in-hand, so to speak on some projects. I have had a hard time pursuing much of that dream because my partner in that dream is not here to pursue it with me. (I directly told you once that I preferred someone with a bit more experience work on Airwaves because of some of the more complicated interlinks on it. I still stand by that, but Pat is still not being able to do it for various reasons.) It may be time now to get up and get working, though.
> As soon as I can beat my feet to my ISP, AirwavesRadio goes away. Hey,
> I tried!

Yes, you did. Sorry you feel the need to be so speedy about it.

Bill's memory will remain alive at www.airwaves.com and rec.radio.broadcasting. Thanks to all who have continued to support it. It will continue to grow and will remain the dream Bill had for all radio professionals at every level, from novice to seasoned, can converse and state opinions about radio. One of his greatest dreams was to see licensing of LPFM. It has arrived. Many more of his dreams will continue to be achieved, in spite of his not being here in the flesh to see them himself.

Thanks to all who continue to communicate with me personally about your own hopes and dreams for Airwaves.com and radio, as well as your memories about Bill. His memory will not be allowed to die as long as there are people out there who care. I truly believe that with what he started, that means

that memory will be forever.

2707. status of LPFM apps

Newsgroup: rec.radio.broadcasting
Date: 2000-07-04 00:00:00 UTC
From: jkir@aol.com
Message-ID: <20000704151351.02029.00002846@ng-cg1.aol.com>
Source record: 18863

I have a question:
I worked up the tech page for a couple lpfm apps none of which fall into this kind of catagory LOL ---> "facilities that
do not meet the FCC's technical requirements. They have absolutely no chance of being granted. One was cochannel about 15 miles from a full power class B!!"
I charged a small fee for the service, 1/2 was paid when the app was submitted to the FCC - the other half to be paid - and here is the essance of my question- (when) I did not want it contingent upon the FCC granting a CP as there are too many factors other than the technical aspects that could prevent a CP from ever being granted - what I want to say is that the second 1/2 is to be paid when the FCC aknowledges that the technical aspects of the application are in fact viable.
At this point the FCC has the apps listed only as "recieved"- and as pointed out before there are MANY that could never be granted due to not meeting the tech criteria. Do you know - will the FCC give public notice of those that do meet the technical requirments? Would this be a notice of "Accepted for Filing"?
I'm looking for the correct terminology to use on an invoice/reciept for the non-profits that I did the work for.
Thanks for any help.

From 'Cindy':

>Perhaps at the time that you set up your sites. You had
>other options that you chose not to take. You were fully
>invited to participate in Airwaves.com, but you opted to
>take a different path because things were not going to done
>exactly your way. It is true that Airwaves.com is behind
>now because of Pat's health. It is not as behind as you
>state it to be or there would be no memorial service on it
>nor other more-up-to-date items.

I want to apologize for my misreading of the situation when I replied
to Mike - I thought he was updating airwaves.com.

>I disagree. John's assistance has not been wasted.

There's another issue. John wears several hats. He works for the
town of Trumansburg, New York as a commissioner. He is a published
author (one of his works being "The Internet for Dummies", which
he co-wrote with a couple other people). He is active in spamfighting
activities, including working closely with CAUCE (http://www.cauce.org) -
I believe he's on their board.

What this means is that he has other things that he is doing that are
undoubtedly going to take higher priority over rrb. It stinks, but that's
the way it is. I appreciate whatever it is that John's doing, as the work
that he is doing here requires him to give up some of his personal time.

>stand by that, but Pat is still not being able to do it for
>various reasons.) It may be time now to get up and get
>working, though.

I'm willing to help.. don't have a lot of time but will give you what
I can.

and... I apologize for my rather nasty to Mike. He walked in here
with an attitude, which I think is rather clearly displayed in the post
to which both Cindy and I replied. That irritated me. I thought his attitude
was completely out of line.

Excellent improvement of KABC's ratings? They set a RECORD
****LOW**** last quarter. Or do you attribute Hayes' firing to
something other than abysmal ratings?

Note the wording:

"So much for Low Power FM's. Be aware of what interference they can cause to your favorite radio stations and contact the
FCC to file a petition to deny any applicant you see for reasons of possible local channel interference and possibly distant
co-channel interference as well."

Not: "...file a petition to deny any applicant who may potentially cause possible..." but, instead it's all covered under the umbrella: "...file a petition to deny _any_ _applicant_ _you_ _see_ for reasons of possible"
This character's not even looking to file petitions based on REAL interference. He wants to incite you into filing them because of POSSIBLE interference. Hey! Basded on that analogy, we could all file petitions to deny against EVERY station at EVERY license renewal! They ALL can POSSIBLY interfere with each other (sporadic-e skip, tropospheric ducting, etc.) at ANY time. Sorry, Jack, the idea doesn't float!
It also sounds to me as if he's advocating filing a petition to deny against ANY APPLICANT YOU SEE, for ANY POSSIBLE REASON, period! (I wish that frivolous petitions were like frivolous lawsuits: If found to be based on unsubstantiated evidence the PETITIONER would be forced to pay all costs INCLUDING the costs involved in defense processes... Hmm, maybe another change to work on! (Bet the congressmen would REALLY consider that one, huh? NAB! Start stuffing more pockets to head-off this issue!)
I'll quote and comment on one more small bit of this "opinion" (it's CERTAINLY not fact) and be done:

"Nine LPFM applicants fighting for the 104.7 frequency in Los Angeles and Orange will cause co-channel interference with
Oxnard's 104.7 100 miles to the North, as well as a few pirate radio station operators using the frequency."

Now, can someone PLEASE show me where and when FM stations were able to start obtaing protection out to 100 MILES and beyond? Oh, I know a full power station must protect another full power station to these extremes, but I'd be willing to bet that, if American Family Radio were to apply for 104.7 MHz. at this location as a translator, you'd never hear a word against it... It's only the local origination that seems to upset some folks so much! I have to wonder why...

You know, here in Northeast Massachusetts, if I can get local news
coverage when LPFM
comes to town, I don't care if I can't hear a second-channel adjacent
from, say,
Lewiston, Maine or Concord NH.

> Co-channel - channels sharing the same frequency such as 90.7 in Los Angeles
> and Tijuana
>

How are KCLB's ratings in El Centro? Is there a rabid listening
contigent that would
really be affected? What do your studies show on this?

> In Escondido, a LPFM applicant at 99.3 could cause co-channel interference
> with nearby Hot Country from Tijuana.

OK, but Tijuana is outside of the United States. We aren't supposed
to use FM or MW for
international broadcasting, are we now? The question is, will the
LPFM station
interfere with Tijuanans' ability to hear the
"Hot Country" station? Oh, never mind, I know that rules are meant
to be broken. We
are supposed to look the other way, right?

> In Vista, three applicants for the 99.5 frequency could also affect reception
> of 99.3 and 99.7 from Tijuana.

Ditto.

> An LPFM station at 103.7 in Yucca Valley will interfere with either of the
> 103.9 low power radio stations in San Bernadino
> and Coachella.

Again, perhaps the LPFMers will exhibit a spirit of cooperation.
Perhaps the Yucca Valley
applicants will accept adjacent channel interference in their fringe
zones and they won't be
concerned.

> Two stations on 103.9 from Irvine and Corona will interfere with Inglewood and
> San Bernadino's 103.9 stations, as well as
> with soft pop KOST 103.5.

Tell me, there are no second-channel situations now in Southern
California (whoops-
Mexican border stations count as Southern California, right?) So
somehow, LPFM stations
have some "laws of physics" characteristics that full-power and
satellator stations
don't? I mean, that's what NAB et al have been arguing all along.

> Two LPFM stations on 104.1 in Hemet and in San Clemente can cause
> adjacent-channel interference with KBIG 104.3's
> distant signal.

How are KBIG's ratings in San Clemente? Was it Nixon's favorite
station?

>
> Two staitons on 104.3 in Fallbrook and Oceanside will cause co-channel
> interference with KBIG and adjacent-channel
> interferend with Tijuana's Radio Latino at 104.5.

If it causes interference in Tijuana, it would be an issue. If it
causes interference in
a stateside area, it's not a concern ---except to the Mexican station
who doesn't want to
serve a Mexican audience, and I don't think the FCC should be worried
about FMers
transmitting across the border.

> Nine LPFM applicants fighting for the 104.7 frequency in Los Angeles and
> Orange will cause co-channel interference with
> Oxnard's 104.7 100 miles to the North, as well as a few pirate radio station
> operators using the frequency.

Unless they're running as a rimshot LA-wannabee, and I don't know their
format, why would
they be concerned about it? And the LPFM station isn't going to blow
out the Oxnard
station's primary (intended) reception area.

And the FCC should not be overly concerned about protecting long-range rimshots.

> Four LPFM applicants on 105.3 in Coachella might cause interference with a
> religious translator at 105.5.

boo-hoo!

> Nine LPFM applicants on 105.5 in San Bernadino won't cause any noticable
> interference.

Of course.

> There are an astounding 22 LPFM applicants in San Diego county ranging from
> the city itself to National City to Chula Vista to

> frequency of 105.9. Although 105.9's closest San
> Diego stations are located at 105.3 and 106.5, they will definitely cause
> co-channel interference with KPWR's Power 106 at
> 105.9, making fans of hip-hop angry.

Yes we all know that hip-hop stations generally bring community service home.

>
> Two applicants at 107.5 in San Diego will cause adjacent-channel interference
> with the two Tijuana frequencies of 107.3 and
> 107.7.

Again, will the interference be noted in Tijuana? Or just to the cross-border audience?

Maybe if the FCC dumped some translators, the interference issue would subside.

Terry,

You should know that the laws of physics don't apply to translators. That's why you're not hearing any complaints about them.

Even the FCC agrees on this, because during the preparation for the imminent introduction of LPFM, they went willy-nilly granting translator licenses.

Aren't Mexican stations not protected from interference at points north
of the border? (i.e., the LPFM is free to interfere with the Tijuana
station as long as only Americans receive interference - just as Mexico
could legally build a low-power station on 101.5 as long as all the
interference to KGB stayed south of the border?)

It's been a LONG time since I've been to Southern California, but I sure
don't remember any SD stations providing any more than "DXer quality"
signals into LA, nor Oxnard 104.7 being more than "DXer quality" in LA.
Nobody is going to be losing any revenue over these apps.

This is going to come across as an "I told you so" but, I know of FOUR
apps which were filed defective AFTER the applicants had informed me that
they had no need of hirirng someone to prepare their application... It's a
shame they won't be getting a second chance to excercise the knowledge
gained in the lesson they've learned...

You may also use brand names and give the telephone number and company
logo IF it is not promotional. "In Business for over 50 years" wowuld
be ok.. "Always a discount"
would NOT be ok.

I guess the question is, does the FCC care? A lot of Hispanic stations don't like the concept of call letters - so they "accidentally on purpose" miss their legals at the top of the hour, especially if they are rimshots. Ever seen any of 'em fined?

None of this really makes a difference... If the corporate folks hold true to their plans, they'll STILL file those petitions to deny! (You'll think I'm joking about this, but I'm not...) One group that I've worked with in the past, at about this same time during last year, had planned to complain and file against LPFM's as far as two states away! There are some really GOOD chances of a 100 watt signal interfering with a 100,000 watt signal 500 miles away (we're talking from Georgia to Arizona, here)...

Underwriting can identify the donor, its business or products, and may include a long standing sloagn that is non-promotional or comparative in nature. It can not include price, call to action, or comparative or qualatative language, even it the latter is true. Most underwriting that is legal mentions the business, a short decription on who or what they are or do, and the address and phone # and or website.

> it can't have a music bed (I have no idea why).

Not true...It can be over music, as long as it does not enhance the underwriting message. The FCC has no rule on music. However, if it sounds like a commercial, it is more likely to draw attention. Many public stations read underwriting over a music bed, either one that is part of the program, such as the music bumpers in ATC or ME, or have their own local bed as part of the break.

Ahhh.... But, generally, there was a REAL PERSON there making observations about the LOCAL area in the background... In fact, you could even make a "request" and probably get to hear YOURSELF on the air as recording callers and playing them back was one of the best, if not THE best, "hook" in getting listeners to stay with the format. (When "Suzy from the west side" called in, you'd better believe that "Suzy" made sure her 23 friends were listening... And EACH of those probably made sure that, by the next day, 23 more of THEIR friends were listening... You'd be AMAZED at how much of an audience you can build if you start with ONE listener and that person will tell ONE other person who will in turn tell ONE other person each day... They didn't listen for the music. Oh, it was important, but MOST people listened because they wanted to see what was going on IN THEIR AREA! This is what built Top-40 as we once new it. LACK of this is what also led to it's demise... Thank you, Mr. Regional Programmer.

Actually, "thank you, disco" should be the response for the demise of
New York's Top 40.

Just to update you guys, I accepted the job, and its for real, I am in Sweden now, airfare, room and board paid. Plus a meager weekly salary.

I am having the time of my life, and am glad I accepted the offer.

I also learned how to spell Sweden, but haven't learned much of the language.

Its for real, I answered the ad, I was offered the job, I accepted, I am glad I did. It is like you said the best 6 weeks of my life.

The accomidations arent the best, but I lived in the dorms at the Univesity of Central Oklahoma so I've lived in much worse.

The stations are automated the rest of the year, the 5 DJ's on the staff record liners for use after we leave.

Kara, the year round air talent has a voice over company and is pretty much doing contract work for ROR and will be moving back to the states for the first time in 10+ years to pursue a gig at "The Gator" in West Palm beach.

Roaches aren't the problem, due to rain its the damn flies.

I'd be glad to keep you updated, but can we consolidate to one thread?

I started one of my own before I accepted the offer becausse I really thought it was a scam.

But it isn't, its the most exciting thing I have ever been involved in in my 12 years in radio.
